Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your

article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

>Sure is a coincidence, isn't it, OYE...I, I mean "Proudhawk."

Let me get this straight . . . ERIC OYEN ruined your life?? Why, then you must be Drew Durigan, the infamous DJ dork who's been constantly bitching about Oyen in the radio-related newsgroups for nearly THREE YEARS. Let's see . . . about three years ago, Mr. Oyen claimed he was going to take legal action against Mr. Durigan on the grounds that Mr. Durigan had libeled Mr. Oyen in a public forum. If my memory serves me correctly, the allegation was originally made in this very newsgroup. Since that time Drew has gotten a lot of mileage out of Mr. Oyen's bogus legal threats by posting dozens of off topic messages more or less stating that he is still waiting to hear from the OYE BOY's lawyer. Rather than ignore Mr. Durigan's posts as he should, Mr. Oyen has continued to respond and help keep this inane feud going. And rather than taking their childish feud to the privacy of email, they continue to air their dirty laundry in a public forum.
Give it a rest, guys. The war is over. No one gives a fat rat's ass about your personal vendettas; we're here to read about the subject of scanning. And unless either of you hold a law degree from an accredited law school (which I highly doubt), you are both talking out of your asses when it comes to the subject of legal matters.
Have a nice day.

I just wanted to let everyone know that I just ordered an interface cable for my BC 895 XLT from these guys and they were great. They had the lowest price I had found and they were very friendly. The cable got to me by UPS in 3 days.

If anyone else is needing electonic related items, I think you'll be very pleased with Grove.

Just heard from Uniden re: release date. here is the email:

The BC245XLT should be out on the market in late summer. Yes
it will do both GE/Ericsson and Motorola.

You are asking about scanners that can listen to cellular phone conversations?
If so, the answer is yes, but it is illegal to import such scanners into the
USA, although many do it anyway. Good luck.

For a good indoor antenna, I've had great results with the Radio Shack magnetic mount, mobile scanner antenna. I don't know the catalog number, but it's about three feet high, with two loading coils within that length. I stick it on top of my file cabinet in my computer room.

For sale, nice condition cell enabled Realistic PRO-2022 scanner. Includes original telescopic antenna and Radio Shack coiled car 12v power cord to use with it. Photocopy of original manual. $180, I'll pay UPS COD shipping in lower 48.

Even though this scanner is intended as a base unit I've found it worked really well sitting on the passinger seat of my car. The audio was clear enough and loud enough that it could be easily heard in traffic (thanks to not having to run it off of AA batteries I'm sure). I'm sure alot of us have really hated listening to the little tinny speakers on most pocket scanners while driving. The blue CONSTANTLY illuminated LCD screen is nice too, the handhelds that turn off after a few seconds may save on battery life but are a real pain when being used at night while driving.

Specs for this unit can be found on the web, I've been changing hobbies abit and have decided to part with one of the scanners.

1722. FS: Cheap 386SX laptop for scanner control

Newsgroup: rec.radio.scanner
Date: 1999-02-16 00:00:00 UTC
From: watsons@aol.com
Message-ID: <19990215235154.20661.00001828@ng154.aol.com>
Source record: 127419

For sale Toshiba T2000SX 386SX-16MHz laptop with power brick. 40 MB hard drive, 9600 fax/data modem, monochrome screen, one meg memory on board with 2 meg memory card. $120, I'll pay UPS COD shipping in lower 48.

Not much of a computer by todays standards but if you have a scanner that can be controlled by a computer running DOS or Win 3.1 it might be something worth considering as a dedicated control computer. Works great as a terminal or word processor too. Has DOS 5.0 with WIN 3.1 on it. Works for windows 3.0 too. No program floppies are included, no manuals either but it's not too tough to figure out if you're at all familier with computers.

A good one in top shape will run between $240-300.If one is purchased without a cell mod done you can buy it cheaper and than do it yourself.Don't pay over $300 unless it is new.There are plenty of them out there.One good idea would be to look for the pro-2005 for less money.Damn near the same thing.

From: Mike Lyon <mlyon@primenet.com>
Message-ID: <7abe2uotv2@nnrp02.primenet.com>
Source record: 127430

A few years back I had a cool frequency listing which had all the listings of all the public service frequencies including Santa clara county fire, CDF and everything else. It came as an archive which had listings for every county of California. For the life of me I can't remember where I stuck the archive. The listing was cool because it had the location and the inputs as well as the tones that are used. If anyone has this, I would greatly appreciate a copy of it.

Thank You,
Mike Lyon

ICR2V100 worked for me. First I downloaded the R2 to the computer. The first time I tried uploading to the radio, I got the CL ERR message and the radio was initialized.

After rebooting the software and starting over, it successfully uploaded to the R2.

I used the OPC478 cable I already had for the ICOM R10. Both radios use the same cable.

Jim

>This 2004 has had the cell mod done to it, however the steps are still
>> 5, 12.5 and 50 Khz steps, no 30 Khz steps...any thoughts? Is this normal?

The 2004 pre-dated cellular expansion. (It also pre-dated the listening ban in the U.S.). It wont do 30 Khz at the extreme lower and upper band edges, but should default to 30 Khz as it searches towards the middle portions of the band. Isn't there a diode that also affects step sizes?

Source record: 127187

>What is a PRO-2006 worth these days? I'm looking for one, but have no idea
>what to pay.

If you get lucky, you can find a 2006 in decent shape for between 250-300 bucks, but more than likely, you'll pay 300-350 for one. I've seen them go on Ebay for all different prices. I bought one a year ago at a local hamfest that was in prime condition for $325.00 and had the manual, box, antenna, and a backlight that was good and bright. It runs 24 hours a day with an Opto-456 board and never a moment's worth of trouble. I bought one from a guy here on the newgroup back in December for 280.00, and it looked like it had never been taken out of the box. I just bought another one for 250.00 and it's on it's way here now, and is supposedly in real nice shape.
If you find one that has some scratches and nicks, you can still get replacement cabinet pieces from Tandy. The upper and lower case runs right around 40 bucks, and the replacement backlight runs another 30.00, so you can easily restore one to like-new condition if you find one at a decent enough price.
You just have to do a lot of looking, and don't get nuts on Ebay trying to outbid someone else who'll probably pay too much, not knowing what one is really worth.
Good luck, the 2004/5/6 series are fantastic scanners. Add a 456 board to a 2006, and it's like owning one on steroids!

Dan

It's a limitation of all the trunktracking scanners, with the only exceptions being the Optocom and the ScannerMaster PC board. Uniden is due to release a version of the trunktracker that will track multiple systems, so this might be worth looking into for you.

I noticed you have a PRO-2006. Bill Cheek's website details how you can (using his hardware add-ons and freeware off the 'net) trunktrack multiple systems using your computer and scanner together. This is probably your best bet right now.

No, the BCT7 doesn't have batteries, it takes an outside power source.
But it can be used as a desktop easy enough. You could carry it from your
car to your home.
If you were sure that it was one of these two radios you wanted, and
you want portability, you should probably go with the SC150. You could
always get a mobile antenna and use it in the car as well. Get a wall wart
and use it in the house. Just an opinion.....

>help me to make a decision. Thanks.

It depends what kind of listening you think you're going to do on
shortwave. For casual purposes, such as listening to international
short wave broadcasts, a scanner should be quite adequate. However,
if you're thinking about monitoring SSB or RTTY traffic on a regular
basis with lots of strong signals nearby, you should really consider a
radio which has been optimized for that purpose.

Scanners are optimized for wide band sensitivity. The dynamic range
is secondary. Shortwave receivers are optimized for dynamic range.
You are more likely to find many signals closer together on short wave
than you will on VHF or UHF. When confronted with lots of strong
signals near the weaker signal you're listening for, a receiver
designed for shortwave will fare better than a scanner. Further, most
scanners do not have features like a crystal filter or a low noise
local oscillator. When monitoring AM, this isn't much of an issue.
When digging an SSB signal out of the noise, it is.

Note: the short wave receiver I'm comparing the scanner to is table
top radios in the price range of around $500 and up --not a $200
portable. If you're comparing a $200 radio such as the YB-400 to a
kilobuck scanner such as the AOR 8k, you may not see much difference.

How many in this newsgroup have sent a letter/message to their congress critter speaking out against H.R. 514? If you haven't, now is a good time to do so.

If it does pass the house, please contact your senators and oppose the Senate version.

1773. Help! - BC895 Problem With ID Lockout

Newsgroup: rec.radio.scanner
Date: 1999-02-17 00:00:00 UTC
From: David <kb9akpNOSPAM@ibm.net>
Message-ID: <36CB0C6A.3109B4A5@ibm.net>
Source record: 127258

I am having trouble with my BC895's talkgroup lockout feature. The other day I noticed that it won't let me lock out talkgroup ID's in any of the banks. If I push the lockout button to lockout an ID the display says "FULL" and it won't lockout the talkgroup ID. If I hold the lockout button down to clear out all lockouts it doesn't show that anything is locked out. The lockout will work OK with conventional frequencies.

Can anyone suggest what's wrong or what I might to do correct this problem?

David

Mr. Conduit:

Don't get this clown started. Apparently, he can't deal with the stress of his chosen profession, so he takes it out on people in Usenet. From reading some of his posts, he loves nothing more than to make a new enemy each day - that's the only way I can figure it at least.

Best thing you can do is just let the man have the last word, or you'll be talking to him forever (kinda like our pal Mackey...)

To the rest of you:
Let's just agree to disagree, shall we? This thread has long ago worn out it's welcome, especially in the scanner groups. Let it go already.

Regards,
-Phil

1777. Trunk Tracking worth it?

Newsgroup: rec.radio.scanner
Date: 1999-02-17 00:00:00 UTC
From: pokey069@hotmail.com
Message-ID: <7af80i$kb0$1@nnrp1.dejanews.com>
Source record: 127262

I'm on the verge of buying my first scanner in more than 5 years, but I can't help but wonder if its worth springing for a trunk tracking scanner. In NJ, the state police have been on a trunked system for years, but unless you lived very close to a repeater, the old scanner's just couldn't pick up the signals. Has the sensitivity improved on the newer models? Right now where I live I can't pick up our State PD (I own a Pro 2004, BC760 and BC200). I need to replace my well worn BC200 and I'm wrestling with the idea of spending an extra $100 on trunk tracking.

This is an apples or oranges question. Shortwave covers broadcast stations
around the world. Scanner is most VHF/UHF and limited to a few hundred
miles/kilometers around you. Also, scanning is illegal in some countries,
whereas I can think of none today where shortwave listening is disallowed.

1779. Trunk scanning question (Pro-91)

Newsgroup: rec.radio.scanner
Date: 1999-02-17 00:00:00 UTC
From: tjp@pobox.com
Message-ID: <36cb06b3.932320@enews.newsguy.com>
Source record: 127264
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Just got a pro-91, love the trunk scanning. I am used to a pro-43 and a pro-2006 (no trunk tracking add ons) My question is: Is there any way I can monitor more than _one_ trunked system at a time? Can I do this via the scanning lists? I don't see a way this can be done, from what I can find you can _only_ scan _one_ trunked system at a time, scanning lists or not. Can some one please verify this? Also, if this can not be done, is this a limitation with the pro-91 or is this a limitation with trunked scanners in general?

Thanks, this is driving me nuts.

There is very little information of any use you can get from an aircraft transponder. All you would decode would be altitude, and a four digit number (squawk) which you will be unable to crossreference to a particular flight number. There is no information relating to aircraft position. That's provided by the interrogating ground station by looking at the antenna position and time delay, giving radial and distance from the site.FAA computers will crossreference the squawk with the flight number. Of course you don't have access to any of that information.

>Hi, anyone know about cleveland police changing scanners, and does anyone have
>the frequencies for Brunswick Ohio police and fire? thanks You

All of Cleveland is on an 800MHz Motorola ASTRO system, but fire
dispatching is simulcasted on 153.95MHz. As for Brunswick City,
police are on 460.025, and also 460.375. They dispatch on the first
frequency and I've heard they are getting a repeater for the second
frequency also, but back when I was in the Cleveland area, that was
still simplex. Brunswick City fire dispatches and operates on
460.575. I would also listen to 460.625, might be a fireground
frequwncy for them. If interested in Brunswick Hills, they work on
452.200 and other Medina County departments are dispatched on 460.525.
Let me know if you want any other frequencies and information.

Jeff

Monitoring two trunk banks at one time cannot be done on the TrunkTrackers at this time.

This year, soon, UNIDEN is introducing a second generation TrunkTrackerII, that will enable you to monitor 2 banks at one time.

>can anyone tell me the ins and outs on buying an unblocked scanner by
>mailorder from Canada for use in the USA? Will it be confiscated at
>the border, etc?

Pros:
1. You get a scanner without any freq's blocked out.
2. You can get one that isn't sold in the US at all, like the Yupiteru
models

Cons:
1. You pay way too much for a band you probably won't miss.
2. You risk losing the price of the scanner and instead providing one for
free to the US Customs Agent who spotted it first. (This has happened to a
few folks before)
3. If the Agent is a real "Dudley-Do-Right" then he reports it instead of
taking it home for himself. You get hefty fines on top of the cost of the
scanner. And you still don't get your scanner, or your money back.
4. If you listen to the illegal band and the FCC gets wind of it somehow
(like talking about it in usenet, for example) they come get the radio and
you get to go to court to pay fines and might even get to mingle with the
dregs of society in jail.

IMHO the only scanners worth buying this way is the high end stuff, like the
AOR and Yupiteru scanners. You can easily spend $500 to $800 or more on
these radios, and that's at a bargain price! That's a lot of scratch to risk
losing at the border just to snoop on someone's phone calls.

I have a follow-up question:
When you come in from Canada via airport, or across the bridge, and the Customs Agent sees your scanner in your car or suitcase, do they really go to great lengths to check if it is cell blocked or not ?

Its not a Pro-8, as I've got one of those. The Pro-8 has black and red
buttons, white lights, gray body, chromed face place, but is 8 channel VHF-Hi.
Works great as I listen to it all the time.

I have one on loan from a dealer, I am dissapointed, the adjacent channel rejection is 50DB , which allows for extreme bleedover at 453.00 , and 150-154mhz in my area of Pittsburgh, the audio is fantastic, size great, sensitivity is good example at 154.Mhz, 40 miles away I could receive mobile to Base. The CTCSS/DCS decoder functions only when the proper PL code is inputed. It cannot decode or find a code and then have the unit display the PL code as I thought I may have worked. The owners manual provides you with all the CTCSS codes but if you don't know the PL code for a particular agency it is hard. especially with over 100 codes and no frequency book provides such corresponding data. It can be linked to a computer for data entry of frequencies, but I gave up when I had so much channel bleedover. It works great as an Aircraft Scanner , and if you are in a semi rural area it may work for you. Funny however my dealer just sold several to PD depts for their vehicles

Source record: 127304

2006's are going between $300-400 for ones that include the original box, manual and in mint condition. These are already cell moded.

I just picked one up in "mint" cond for about $380.

Looks like it is brand new. These radios are quickly becoming scarce and are on of the best scanners made to date for the price.

I have both a hand held and stationary scanners.

I enjoy both but for versatility i would go with the hand held. They can operate without electricity (by using batteries) and you take them with you wherever you go.

They also can operate by being plugged into your cigarette lighter.

Many times, frequencies used in one area for buisness SMRs may be used in another area for public saftey systems. Furthermore, public safety, buisnesses, and even the federal government can even share the same system. Outlawing these radios could be disastrous.

Hello all Trunkcomer's!

I've updated my digital signals page with lots of new information, including WAV file examples of lots of digital signals. There are also numerous examples of Radio Trunking Data Channels. Here is a list of the wav files currently available on the page:

Motorola Newer Trunked System Control Channel
Motorola Older Trunked System Control Channel
Motorola ASTRO 9.6K Newest Trunking Control Channel
Ericsson EDACS Trunked System Control Channel
Ericsson EDACS Narrowband Trunked System
Motorola ASTRO APCO-25 IMBE Digital Audio
Motorola ASTRO VSELP Digital Audio
512 Baud POCSAG Paging
1200 Baud POCSAG Paging
2400 Baud POCSAG Paging
Motorola FLEX Paging
600 Baud Golay Paging- (Decodable)

Motorola MDC-4800 MDT Protocol- (Decodable)

Motorola RD-LAP MDT Protocol - Not Decodable
Motorola MDC-1200 Signaling Protocol (Signaling, Emergency, Status etc)
Motorola MODAT Signaling Protocol (Signaling, Emergency, Status etc) -

GE/Ericsson GE-STAR Signaling Protocol (Signaling, Emergency, Status etc)
Motorola OTAR (Over-the-air-rekeying) Used for Fed/Mil DES rekeying of radios.

Also included are downloads to decode a number of these signals, and links to lots of other decoding applications.

I also updated a considerable amount of information regarding the interfaces needed to decode these signals. Check out the page for the latest details.

Hi Folks,
I am going to buy a handheld in the very near future. I have read all of the reviews at Strongsignals.net but find myself still undecided about which unit is best to buy.

I am considering the following models icom R10, icom R2, Sony Icf-sc1pc, Bearcat 235xlt, 3000xlt, Relm HS200

It appears to me that the Sony has good value for the money.

I would appreciate any and all advice as I am fairly new to this hobby. Also, is there a signal source that has "the" best pricing and reputation that does mail order?

Thanks

Sean

> the U.S.). It wont do 30 Khz at the extreme lower and upper band edges, but
> should default to 30 Khz as it searches towards the middle portions of the
> band. Isn't there a diode that also affects step sizes?

In the same diode matrix that contains the cell switch (D513) are about a
dozen or so other diodes. One of these controls whether the cell band
will default to 30 KHz or 12.5 KHz. Other diodes controlled features and
band limits for different markets. For example there is a diode that
deleted certian low band freqs for some european markets.

There are 3 versions of the 2004.

The oldest version cell band was exactly 870 to 890 MHz, and the cell
diode was on the bottom of the controller board.

The middle version had the same Cell band limits, but the cell diode was
D513 on the top of the controller board.

The newest version had the expanded cell band limits, with the same diode
location.

The 2004 was built before the ECPA came out in 1986. The 2004 was
introduced sometime in early 1985. Since Radio Shack also sold car phones
at the time, they thought it better to delete the coverage. It was not
illegal to produce a radio that covered cell band freqs until the early
1990's.

1827. Re: winradio problem?

Newsgroup: rec.radio.scanner
Date: 1999-02-17 00:00:00 UTC
From: Wayne Joyner <wjoyner@iname.com>
Message-ID: <36ca65ab@newsreader1.uswest.net>
Source record: 127323

I also have a WinRadio WR1500. I do not have any problems with mine. The only complaint I have is that the radio is pretty useless for true scanning purposes without their $49.00 database program. Other than that and not having been able to get it to receive HF FAX or other Digital Suite items. But I chalk that up to inexperience with the equipment. I just bought it on 02/13/99. If anyone can provide me a little help in using their Digital Suite product to receive weather faxes, etc. that would be greatly appreciated.

To perform a limit search:for example 46 - 50 mhz

press manual 46 limit(sets lower limit)
press 50 limit(sets upper limit)
press search!

You might try Uniden/Bearcat's web site for the manual if available.
Don;t know address off hand.

Message-ID: <7adrcc$j86$1@news.sas.ab.ca>
Source record: 127327

The pro 2050 is a trunk tracker scanner made by radio shack. What I am wondering is if anyone has one and could let me know how well it works at following the conversations of the emergency services, ie fire, police. Also what if anything am I giving up with this type of scanner as opposed to one that does not do trunk trackings? And lastly, can these newer scanners be modified to get the full 800 band for cellular?

Thanks for any info.

Message-ID: <atvy2.1989$Sd4.13307@newsfeed.slurp.net>
Source record: 127329

San Bernardino & Riverside CHP have recently changed frequencies. San Bernardino is now on the Copper-1. (39.26 Dispatch & 42.74 Mobile) Riverside is now on the Turquoise-1. (39.68 Dispatch & 42.02 Mobile) Rancho Cucamonga is on the Beige-1 (39.88 Dispatch & 42.08 Mobile)

The color is the designation of the different frequency pairs.

Hope this helps ...

Mike Derryberry

Hi,

I feel really dumb cause this area is so new to me. I never had a scanner or any other related equipment before. I'm a network professional and heard about scanners, etc. but never tried them.

Can anyone suggest what and where can I get to try out scanning, given it's just to try and see only?

Sorry if I sound ridiculous,

Thanx

Now that everyone else has chimed in...I live in the SF Bay Area and had a 7100 and currently have a 9000M3. Although the 7100 is prone to overload, even in this area it worked well. I found that adjusting the length of the antenna was the best way to limit the signal input (when required). As indicated by others, the radio performs at it's best when out in the boonies where it's full sensitivity can be exploited. The 9000M3 is much less prone to overload, and seems nearly, if not fully as sensitive. Another suggestion for a less expensive radio (although without SSB) is the Icom R2. Had one of those as well. It is much better than the 7100 at avoiding overload while being nearly as sensitive....but it has other limitations.

> and it won't lockout the talkgroup ID.

The memory for talkgroup lockouts is shared across all banks and is limited to 100 IDs. If you lockout 20 talkgroups in bank A, you only have 80 left for banks B-J.

> If I hold the lockout button down to clear out all lockouts it doesn't
> show that anything is locked out.

You have to hold it down until you hear two beeps, then press [E]nter. Without the [E], nothing happens (see p.43 of the manual). You'll have to do this for each bank where you've set lockouts. Note that if you locked some IDs during Search mode, you might not realize they're still locked. To review the lockout list for a bank, hold L/O until you hear two beeps, then use the tuning knob to walk through the list.

> The lockout will work OK with conventional frequencies.
Conventional scanning uses the scan bank memory to store the lockout flag. Its only limit is the 300 channels you can program.
Conventional searching uses still another memory to store the lockouts and has a limit of 20 entries (and there's no easy way to delete them, so remember what search frequencies you locked out last month!).

I'm looking for frequencies for Halifax, Nova Scotia. I have a brand new PRO-90 trunk tracker. I'm completely a newbie to scanners and I'm hooked. Got it to monitor the fire department as my hubby has recently joined, but I'm having so much fun, it never gets turned off!

Already have the police and fire programmed in. Have also picked up another trunking system but haven't been able to determine who is on it. It sounds like oil delivery trucks and couriers.

I'm also looking for the 10 codes for the police, fire and ambulance for this area and translation of the "police-talk" I'm hearing. For instance, what's a Charlie unit signify?

Thanks

Carolyn

S Ovington wrote in message ...
Hi Folks,
I am going to buy a handheld in the very near future. I have read all of the reviews at Strongsignals.net but find myself still undecided about which unit is best to buy.

I am considering the following models icom R10, icom R2, Sony Icf-sc1pc, Bearcat 235xlt, 3000xlt, Relm HS200

It appears to me that the Sony has good value for the money.

I would appreciate any and all advice as I am fairly new to this hobby. Also, is there a signal source that has "the" best pricing and reputation that does mail order?

Thanks

Sean

It seems that most of us hang on to those scanners for some reason or another.
I bought my 2004 back in 1990 used for $200. Even after I lost interest in
scanning (I'm back into it now), I wouldn't dare to part with it, and it still
works as good as the day I bought it.

This is a possible solution for "wacars" crashing. At least it fixed my
problem. My understanding is, file "bwcc.dll" should be the Windows/system
directory. If you find it in the "wacars" directory, move it to the above
location. There should be just one "bwcc.dll" file only. I moved it there but
still had a problem with crashing. I went one step further and suspected that
the file may be corrupted. I went to the "DLLArchives" @
http://solo.abac.com/dllarchive/B.html and downloaded the file located near

the bottom of the list. I replaced the "bwcc.dll" in the windows/system directory and it has not crashed yet. Before, it would crash a few minutes after executing the program. Good Luck!

Drew
Jim Wardrip, W8EMS wrote in message
<17787-36CA2888-70@newsd-123.bryant.webtv.net>...
Minitors use a two tone paging system where the base transmits one tone followed by another. These tones are detected by the tone "reeds" in the pager and let the audio pass to the speaker so you can hear the transmission. Depending on the model, most pagers have a monitor position where you can hear everything on the channel. Only the newest models have more than one channel. The old ones do make good single channel monitors for listening to local fire or PD channels. I have two low band (45 Mhz) Minitor l's with chargers for sale or trade if your interested.

There's a so-so version of it online at tandy.com
You can also order a new one from them...runs right at 8 bucks.

>seem to offer them anymore other than theLite version.

You can't...They quit selling the full-blown ones almost a year ago, because the tone decoder chips were no longer being manufactured. You can get the lite version on sale now for 99 bucks direct from Opto.
Some dealers may by some remote chance might have one sitting on a shelf, but other than finding someone who has one and willing to part with it, your chances are pretty slim.

1887. ICOM R8500 Question

I'm looking for a owner/user of the ICOM R 8500 who can help me. I've been trying to store & use scane
edge frequencies. Yes, I have and do read the manual.

I have a disability, so doing some of the functions is difficult.
Thanks Jim Gonsalves

Yeah, it does look like an nice one, but I always get outbid on Ebay because some sucker comes along and bids way too much. I've had better luck buying them from people here in the newsgroup for less $$$ than what they end up going for on Ebay.
Good luck with your auction, you shouldn't have any problem with your reserve being met.

Yes. Any trunked frequency below 800 MHz will be handled. You'll need to know a base frequency, all the output frequencies, and the spacing, e.g. 25KHz. 900 MHz will work just like the 800 MHz does now.

That's one of the theories on what HAARP's secret ability will be able to do.
Anyway, regardless of what secret radio weapon and secret communication system
HAARP turns out to be, the next HAARP transmission will be MARCH 1999 !!!!!!!!
So get your receivers ready !

Here are the links for the HAARP March 1999 upcoming test:

MARCH 1999 TEST ANNOUNCEMENT:
http://w3.nrl.navy.mil/projects/haarp/hh2.html
EXPECTED LISTENING LEVELS FOR THE WORLD:
http://www.primenet.com/~rfwatts/haarp/haarp.html

Seeing how this is a scanner newsgroup, I thought all those interested may want
to tune in on the HAARP signal. The last HAARP transmission was March 1997,
and many ham radio operators intercepted the signal to get a QSL card from
HAARP. The frequencies were 3.4 Mhz and 6.99 MHz. The next test is scheduled
next month March 1999.
You can read about the March 1997 test at:

http://w3.nrl.navy.mil/projects/haarp/htst/hhann.html

1895. For Sale: Realistic Pro-43

Newsgroup: rec.radio.scanner
Date: 1999-02-18 00:00:00 UTC
From: casper@superlink.net
Message-ID: <7ai92n$i1g$2@earth.superlink.net>
Source record: 127182

Hello Everyone!

I have a Realistic Pro-43 handheld scanner for sale. It is in excellent condition. There was a modification performed enabling this unit to receive full 800mhz coverage. The manual and rubber duck antenna that came with unit is included.

****Please note: It is now illegal to monitor cellular and cordless phone frequencies in the United States. If you decide to purchase this scanner from me, please adhere to all laws governing the area in which you choose to monitor.****

This unit is also being sold with the following accessories:

Austin Condor "Rubber Duck" antenna
This is a 1/4 wave bnc antenna optimized for the 150, 450, and 800mhz spectrum. It stands 12 inches tall (no jokes please).

Trident GAas Fet pre-amp (uses 9volt battery)
This is a low noise signal booster that attaches to the bnc antenna connection on top the scanner. Works very well pulling in weak signals. The pre-amp has a knob that can be manually adjusted to increase or decrease gain.

Portable Pocket Bank Pak
This is a portable and convenient system where you may bring along a "hard copy" of frequencies stored in your handheld scanner. This bank of cards was specifically designed for a 200 channel / 10 bank scanner. The Bank Pak is new and has never been used.

Archer 9 volt AC wall adapter (Radio Shack cat.no. 20-188)
This AC wall adapter not only powers the hand held unit, it also charges ni-cad batteries if used in battery compartment. The Pro-43 has 2 jacks for the AC adapter. One is to simply power the unit (with or without batteries). The second is to "both" recharge batteries and power the unit. Please make certain ni-cad rechargeable batteries are installed inside unit when using the charge jack!

The Realistic Pro-43 handheld scanner scores a 9 out of 10 for appearance. The scanner however is in absolute perfect working condition. You won't be disappointed by its' performance.

All the accessories score a 10+ out of 10. With the exception of the Bank Pak, the scanner accessories were very rarely used. They just added too much bulk for something that is portable.

The total price (includes shipping and insurance within the U.S.) is $375.00 or best offer. The items listed are being sold together as a package and cannot be broken.

Please e-mail me for questions and pictures. Serious inquires only please. I will not even consider sale until we exchange address and phone numbers!!! All items are sold as-is. Please send for pictures. You must have an idea of what everything looks like. I have a close-up of the scanner so you'll know what the condition of appearance is.

Thank you all for your patience. I know this was a very long posting.

Source record: 127200

Hey, is anyone else besides me following this stupid thing
up there in Alaska ??? What the hell is this thing supposed
to do, anyway? I've read all the web pages, and I'm still not
convinced its not another huge government boondoggle.
I figured we could get a short discussion going on H.A.A.R.P.

Check it out:

http://www.primenet.com/~rfwatts/haarp/haarp.html ("Hugh"'s H.A.A.R.P.
page)
http://w3.nrl.navy.mil/projects/haarp/index.html (Official H.A.A.R.P. Home)

Here's Hugh's brief description on H.A.A.R.P:

"It's a radio. It's not that different from the flamethrowers in daily use for
shortwave broadcasting, and only about ten decibels louder, but its advanced
antenna system concentrates the beam on such a small target that effective
radiated power shoots up into the gigawatts."

>Any comments?

June is what I've received in an email from UNIDEN. But, other people are saying other dates like May to August. I think it's safe to say "Summer 1999".

If you can afford it, just keep the 91 until the TrunkTrackerII comes out. If not, return it, and wait for 5 months.

This is in the manual, In the section about Pass memories. The step
ajust is very handy, however for searching with an offset (Eg Irish
ETACS (analog) cellular, 25Khz Channel spacing but with a 12.5khz
offset.)

>It drove me crazy until I realized what happened. All you have to do is
>push 2nd function and the STEP ADJ key again and this eliminates the
>problem.
Also does away with the step offsets which can be so handy.

>I bought a 3000A in 1994 and was unable to lockout freqs in search. I wound
>up sending that one back and getting a refund.

It annoyed me until I read the manual.
It probably is set up this way for a reason (due to some Design
limitation) rather than just an annoying bug, It doesn't really bother
me much as most of the time I don't need to search using offsets and
anyway, Since the 3000A has No auto store you have to be beside the
radio when it's searching, if you want to enter the searched
frequencies

>I bet it had the same
>problem I described above. I bought my present 3000A in 1998. It's an
>excellent radio. I hope this info helps someone. If so, let me know.

Thanks. I am from Malaysia and we do NOT have *decent* libraries. We lack a lot of community facilities that you have in USA. The books in stock are for family - Cindrella & Snow White types - none for techincal topics as this. It is faster and more fruitful getting info from online libraries such as web sites.

There is currently no scanner that will track the GE/Ericsson system, however, at the Consumer Electronics Show in Las Vegas last month Uniden announced the BC-245XLT "TrunkTracker II," a new scanner that will be able to track the Ericsson systems. Various reports have said it will be able to track BOTH Ericsson and Motorola, possibly at the same time, but I haven't seen anything official from Uniden on this.
The new scanner is expected to be on the market in April or May, so you don't have too much longer to wait.

On the shoulder at night you me.

CHP also would hang out near the on and off-ramps along that stretch of I-15 between Baker and Primm. The Clark Mountain transmitter has been active lately and I've been picking up transmissions as far away as Las Vegas. As Primm starts to grow even more, don't be surprised if a CHP substation is set up there.

The correct frequency is 1090 MHz +/- 3 MHz. As other have stated, it is a pulse signal sending squawk code (mode 3/A) or pressure altitude (mode C) depending on the interrogation. Military has other modes.

You describe the Ryan TCAD device. It is avbailable for a few thosand dollars to be installed in virtually any aircraft with electrical power. I don't think it can be done (manufactured) for any less.

Right now, you can only monitor one trunked system at a time with the Uniden 235XLT, Radio Shack PRO-90, or Radio Shack PRO-91. The specifications for the new Uniden scanner, scheduled to be available later this year, say that it will be able to scan two banks at one time, and that the two banks may each be Motorola trunked, Erichsen trunked, or untrunked. Other news about that scanner is at http://www.usascan.com/html/body_cei_news.html.

Just guessing, but it's likely most of the comms will be 3MHz to 88MHz (SW and VHF-Lo). Satcom may also be used, but I don't know if they'll want to depend on that, not knowing how the satellites have the Y2K bug.

Hi John,

Optoelectronics has a computer controlled Scanner, the "OptoCom".

It claims that it will Track Civilian or Government Motorola Type I and Type II, GE/Ericsson(EDACS) and LTR(Johnson) Trunking systems. It also Tracks Trunking systems in the 400, 800 and 900 Mhz band! It has a 28 channel memory for standalone mobile or portable use when away from the host computer.

It's available through Grove Enterprises for $499. The E-TRAX software for the GE/Ericsson(EDACS) system is an additional $89.95.

Your pro 91 frequency coverage starts at 29 MHz which is higher than
channel 19 which is 27.185 MHz. Your scanner cannot pick up that
frequency.

Source record: 126987
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I am looking to buy an outdoor scanner antenna and wondering if you had any suggestions. The antenna will be mounted on a 60' tower, which has a rotor, so a beam antenna would also be fine if one exists for what I want. I mostly listen to the 400 MHz and 800 MHz frequencies, but I sometimes listen to other frequencies, so I'd like something good for those too but would like it to be best for the other 2 bands.

We of course have Radio Shack antennas and didn't know if any one of those was better. I know a discone type antenna would be good for average across the board & the high end frequencies, but is this the best choice? Any suggestions would be great. We also have a really good Ham shop nearby, which I'll check out tomorrow.

Thanks for your help,

Hello,
Would anyone be interested in trading a BC235XLT for my PRO 51.
It was bought about 1 1/2 years ago.
But it was brand new from Radio Shack date code 11A3. (keyboard mod
works)
I live in a small town and the RS still had the pre 94 model.
Have a manual, antenna, and the glove leather case.
Thank you.
Jeff
PS. I have excellent on-line references.

>keep the -2045?

If you can get it for 150.00, snag it fast. One just sold on Ebay for 300 bucks (overpriced in my book), but it looked to be in really nice shape. The 2004 was the first in the series of Radio Shack's best desktop scanners (followed by the short-lived 2005, then the ever-famous 2006). It is easily modified to receive cell and is a great scanner. Even if you buy it and decide you don't like it, you can easily get your money back, and them some. I would guess a fair price for one would be in the 200-225 range. Just curious, wondering what the pawn shop is asking for it? I always wondered how those guys determined their prices on certain items.

You might double check that you're plugged into the MIC input (not the speaker output) of the sound card.

Hello to the group,
I have a like new (3 mos old) 8 port 100 base-T hub. It is 19" rack mountable. These type of hubs are rare and very sought after. This guy is in mint shape!

I also have a 48 port patchbay for use on an Ethernet network. 19" rack mountable great shape! I place the value for the Hub at $175.00 and the patchbay at $100.00. If this sounds like something you might be interested in send me your trade offer (Ham Gear, 2, 6, & 10 meter gear, amps, meters, antennas etc. WHATEVER!) and I will get right back with you. I'm really looking for a 3 to 5 element 6 meter beam or some long pieces of low loss RG-8 coax or a 6 meter all-mode amp. You pay your shipping and I pay mine. (FedEx)

Hello Larry,

I just paid $150.00 for a PRO-26 with all the accessories you have, except the RG-58 cable w/adapters. The scanner is like new, with manual and no box. I thought $150 was a little high, but found the going prices to all be around $125 to $150.

To listen to CB on a scanner, it would have to pick up the 26-27 MHz in AM. Most Uniden/RS scanners do not receive below 29 MHz.

I think scanner makers should not only allow CB freqs, but even dedicate a search band to them. CB is the second thing I reach for when I'm travelling and I see brakelights up-ahead (the brake petal is the first).

Seriously, one of the main reasons I own a Yupi is to have the CB band two buttons away. When I was a newbie, I asked if there was a mod to make my Pro-51 receive CB. I was nearly laughed off the newsgroup, but I really didin't know any better. Someone advised me to get a full-coverage scanner, so I did.

Good scanning.

>I think scanner makers should not only allow CB freqs, but even dedicate a
>search band to them.

I don't know if you know about the new Cobra Handheld CBs ? I recently bought a HH45WX. It looks like a walkie talkie, but it will scan all 40 CB channels, or10 weather bands, or dual scan 2 CB channels, and transmit at 5 watts. When I'm on the road, I take a small bungee cord and bind together my BC235XLT + HH45WX, back-to-back. They don't seem to inter-mod each other, and I hear CB channel 19 & 9 at the same time I'm hearing the police and fire. Total road info.

Receiving any transmission from an airport station over a 130 km path with terrain obstructions is pretty good. I guess you know that they are AM. The tone is the beat between your birdie and the AM carrier. Just amplifying the signal won't do much good. Probably the most econimical thing you can do is to use a directional antenna to improve the SNR, where the noise is your (presumably internal) birdie. The next best approach would be to buy a reciever without the spurious responses. Good luck.

1977. Broken PRO-39 - any ideas?

Newsgroup: rec.radio.scanner
Date: 1999-02-19 00:00:00 UTC
From: "John M. Greene, Ph.D." <jgreene@genelogic.com>
Message-ID: <36CDDE4A.C540D288@genelogic.com>
Source record: 127068
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I have an interesting problem with my trusty PRO-39 scanner. It's scanning fine, but on VHF-air
and the 2M ham band (at least) - when it locks on a signal, I hear about three words of the transmission - and then it fades into white noise. I verified this by tuning to the local NOAA Weather radio on 162.55 MHz - sure enough, I can't hear the transmission after a few words, although my weather alert radio six inches away is having no problems whatever receiving the transmission. Oddly, on UHF, no problem at all! (I have not tried VHF-Lo to see if the problem exists there).

1) Is there really separate circuitry for VHF-Hi vs UHF in this scanner? What's the most likely cause of this behavior?

2) How likely is it that this kind of problem can be repaired economically, considering the surface mount components and that the radio is about seven years old (if it's going to cost $200 bucks, I might as well buy a new scanner!)

3)Any body know what Radio Shack charges for diagnosis these days?

Any answers would be greatly appreciated!

Here is a list of the pre-ban (approx. Apr 1994) scanners of which should be capable of cellular restoration:

PRO-2004 BC-855XLT *3 Regency 4030

PRO-2005 BC-200XLT Regency 1600

PRO-2006 BC-205XLT Icom IC-R10 *7

PRO-2022 BC-760XLT *4

PRO-2026 *2 BC-700A *3

PRO-2027 BC-890XLT *4

PRO-2030 BC-950XLT

PRO-2032 BC-2500XLT *3

PRO-34

PRO-37

PRO-39

PRO-43 *1

PRO-46 *2 *5

PRO-51 *6

PRO-23 *6

Note 1: Date of Mfg code 1A4, 2A4, xA3, xA2 (label in battery compment), or no "A" in the serial no.

Note 2: Date of mfg code 1A4, 2A4, -A3, -A2 (label on back).

Note 3: Date of mfg code must not end in the letter "D", except for OAID. (On BC700A some OBID work)

Note 4: Date of mfg code must not end in the letter "D".

Note 5: Units with date code of 5A4 can tune cellular in 30 kHz Steps using a keyboard entry sequence.

Note 6: Units with date code of 6A4 (and some 7A4) can tune cellular in 30 kHz Steps using a keyboard entry sequence. After 7A4 no mod can be done.

Note 7: The current 1998 models are (so far).

The below list are those scanners that were capable of receiving the full 800 MHz band,

without modification:

J.I.L. SX-400 AOR-950 Icom R-7100 *

Regency MX-4000 AOR-1000 Icom R-1*

Regency MX-5000 AOR-1500 Icom R-100

Kenwood RZ-1 AOR-2500 Icom R-9000

Uniden BC-800XLT AOR-3000 * Icom R-7000

Yaesu FRG-9600 AOR-8000 *

* pre-1994

> didin't know any better. Someone advised me to get a full-coverage scanner,
> so I did.

Speaking of laughable......

I remember when Icom brought out their super-duper, big base station
wideband receiver. You know the one, it used the same box as the IC781
top-of-the-line HF transceiver. Anyway, one of the first features,
noted in the advertisement, of this unit (which had to be worth 5k$+)
was the ability to receive CB radio! Now don't get me wrong, I think
that CB is a very valuable service, but let's face it. You could buy a
brand new super-duper CB radio for a lot less than the ICom receiver and
have the ability to transmit too! 8)

Cheers!
Andy

Source record: 127074

The first week in January I sent my Yupiteru MVT-9000 to these folks for repair. I damaged the squelch and volume pots (I won't go into how). I received the radio back today with the invoice itemizing charges for labor, material & shipping. Well, low and behold the total charges were $489,00.

I fired a rather hasty e-mail off to Mika chastising them for excessive profit, that I could have bought a new radio for that price, etc....etc....etc.

Well, I received an e-mail back from Mika who quite nicely explained to me the charges were in Finnish Marks.

The price was VERY reasonable, approximately $93.00.

Of course, I apologized profusely. Boy, talk about sticking your foot in your mouth.

I'm sure there are more stories out there like this one.......

Source record: 127081

Triple conversion simply means that the receive frequency is passed through 3 seperate intermeadiate frequencies before the RF signal is removed and the audio signal amplifed and sent to the speaker. This makes the radio more sensitive and less prone to interfearance. It would be difficult, if not imposible to change the radio to single or double conversion. Why would you want to?

The Pro -91 only lets you scan one trunking system at a time. I think iin the summer Radio Shack will be coming out with a scanner that can listen to EDACS systems and can listen to 2 Trunking systems at once. As of now you can only monitor one Trunked system.

Hello,

I am considering getting the Optoelectronics OS456lite for my
pro-2006. If you have used one, what is your opinion of it?

Thanks,

Jim...

In San Jose, CA they use "Code 33" for Emergency Transmissions only
and "Code 4" to rusume normal traffic.

> Hi,
>
> What is the inclusive 800mhz range for cell freqs ?

Chs Freqs (base) System Use

991-1023 869.040 - 870.000 A - RCC voice
1-312 870.030 - 879.360 A - RCC voice
313-333 879.390 - 879.990 A - RCC data
334-354 880.020 - 880.620 B - Telco data
355-666 880.650 - 889.980 B - Telco voice
667-716 890.010 - 891.480 A - RCC voice
717-799 891.510 - 893.970 B - Telco voice

Transmissions are FM (some systems are adding digital).
Channels are 30 kHz apart. Mobiles transmit 45 MHz below the
base (824.040-848.970) and are usually repeated by the base.
Channels 991-1023 are also identified as Chs 800-832.

> Also, if i'm scanning with 12.5khz steps would that be sufficient ?

No. They use a 30 khz step

>
> 73's

BTW, It's Illegal to monitor Cordless and Cellular phones in the US!

2009. Decoding those date codes

Newsgroup: rec.radio.scanner
Date: 1999-02-19 00:00:00 UTC
From: scanshack@aol.communicate
Message-ID: <19990218223544.00471.00003947@ng13.aol.com>
Source record: 127109

Decoding those date codes

Decoding Those Radio Shack Date Codes

Decoding the date code on your Radio Shack scanner is as follows.

The date code consists of a number (from 1 to 12), followed by the letter "A", followed by another number (from 0-9).

The first number represents the month of manufacture, while the last number represents the year. (The "A" acts as a separator.)
For example, the date code

3A4 would decode to March 1974 or March 1984 or March 1994

Note that the decade can't be precisely determined but a quick check in a Radio Shack Catalog will help you to determine a decade.

Decoding Those Uniden Date Codes

Decoding the date code on your Uniden Bearcat scanner is as follows.

The date code consists of a two digit code representing the month followed by another two digit code representing the year.
For example, the date code

0AID would decode to Jan 1994 0A = Jan (A=1, first month of year) ID =94 (I=9, D=4)

0EIC would decode to May 1993 0E = May (E=5, fifth month of year) IC = 93 (I=9, C=3)

A=1, B=2, C=3, D=4, E=5, F=6, ETC......

Optoelectronics has a computer controlled Scanner, the "OptoCom".

It claims that it will Track Civilian or Government Motorola Type I and Type II, GE/Ericsson(EDACS) and LTR(Johnson) Trunking systems. It also Tracks Trunking systems in the 400, 800 and 900 Mhz band. It has a 28 channel memory for standalone mobile or portable use when away from the host computer. It's available through Grove Enterprises for $499. The E-TRAX software for the GE/Ericsson(EDACS) system is an additional $89.95.

If you have a CI-V capable receiver, then you can also use the "Optotracker" from Optoelectronics. It claims that it will also Track Civilian or Government Motorola Type I and Type II, GE/Ericsson(EDACS) and LTR(Johnson) Trunking systems. It also Tracks Trunking systems in the 400, 800 and 900 Mhz band. It's available from Grove Enterprises for $294.

Check out the following WEB page to obtain Datasheets on the OptoCom and Optotracker products from Optoelectronics:

http://www.optoelectronics.com/datasheetspage.htm

2023. Confused - scanner? receiver? radio?

Newsgroup: rec.radio.scanner
Date: 1999-02-19 00:00:00 UTC
From: starman <starman@pd.jaring.nospam.my>
Message-ID: <7ajc4s$rt6$1@news6.jaring.my>
Source record: 127123

I am confused after reading various FAQs and visiting many sites. How do you tell when a unit is a radio or a scanner??? What are the key determining characteristics?

iCom model 706MKIIG is categorized as a HF receiver/radio but it supports many features of a scanner such as USB, LSB, CW, RTTY (FSK), AM, FM, WFM (Rx only). It can also receive 0.030 - 200.000 MHz and also transmit 1.800Mhz -148.000 MHz (centain freq range disabled). Why not classify as a transceiver since it can also transmit? Maybe "radio" encompass one-way and two-way?

But I know scanners can only receive but not transmit.

Maybe scanners are for eavesdropping and radio is for legalized reception?

Please enlighten me.

Well, assuming that you want to try listening to your local public safety agencies you need to determine if they use a conventional system (one or two frequencies), an analog trunked system (30 frequencies, shared with other users) or a digital trunked system.
If they use a conventional system them pretty much any scanner will work.
If they use an analog trunked system made by Motorola then there are several radio on the market that can track the conversations as they jump from frequency to frequency.
If they use analog trunked system by any other manufacturer, or a digital trunked system, there are no scanners on the market that will allow you to follow the conversations.
Best advice is to go to your local RadioShack and buy a copy of PoliceCall Plus for about $12. It has a very good introduction to scanning in the front.

GREAT SOUTH BAY AMATEUR RADIO CLUB & SUFFOLK COUNTY RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST - MARCH 7, 1999

On March 7, 1999 the Great South Bay Amateur Radio Club & Suffolk County Radio Club will again sponsor an indoor Hamfest. The location will be at the:

Knights of Columbus
400 South Broadway
Lindenhurst, Long Island, NY

There will be radio equipment, electronic componets, computers and access-ories, softeware, books, technical manulas, ARRL information, Amateur Radio License Exams, Door Prizes. General admission is $6.00.
Free Admission for spouses and children under 12.

VE - ARRL - 12:00 NOON
For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID), and the examination fee, to the exam session. 1999 ARRL/VEC fee is $ 6.45, exact change is appreciated. Novice exams are free.
The VE team is from ISLIP ARES Group and GSBARC. Thanks guys.

For vendor and additional information pleas contact, Peter Portanova WB2OQQ at(516)541-4886. Email info@gsbarc.org

Talk-in will be via W2GSB Repeater on 146.685 4Z(136.5) PL.

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 pm on the W2GSB repeater, 146.685 -600 4Z(136.5) PL required. You may also write to:

Yes, quite so.

Or, as my Grandmother used to say: "Ae*OeOe Ue^#N&Ae Ae!"

Of course, being a most polite and educated woman, she only said this when
she got *very* annoyed.

Need a copy of the schematic for the BC-760XLT.
Will gladly pay copying/postage costs.
Manual from Uniden is just too expensive!

I lost all my 800 Mhz coverage. Cannot enter any 800 MHz freqs.

Thanks,

Gary

2029. FS: Alinco DJ580T Dual Band Handheld, rapid charger, 5W pack - $240

.....................................
: RALEIGH (NC) AMATEUR RADIO SOCIETY :
: :
: HAM RADIO LICENSE CLASS :
: :
: BEGINS MONDAY, MARCH 1ST, 1999 :
.....................................
```

Stop listening and start talking!

Er, no, that's not exactly right... or, wait, come to think of it, listening to many hams, it's exactly right. Well, anyway....

The Raleigh (North Carolina) Amateur Radio Society will teach a class leading to the Technician Class ham license (NO Morse Code required!). This class is for everyone interested in ham radio -- you don't have to be an electrical engineer to get a ham license!

We'll have a free introductory class on Monday, March 1st, at 7:00 pm. Then, the class will meet Monday and Thursday evenings at 7:30 pm for six weeks until April 8th.

Optional Morse Code study is available.

It will cost you about $10, plus $15-20 for materials. Class will be held at the NORTEL education center, on route 54 near I-40, west of the fairgrounds in Raleigh.

For more information, visit the RARS web site at:

http://www.rars.org

and select the menu item for the Novice/Tech class,

2036. One sided reception on base cell frequencies ?

Newsgroup: rec.radio.scanner
Date: 1999-02-20 00:00:00 UTC
From: Art M <me@somewhere.com>
Message-ID: <36CF6276.6D89D997@somewhere.com>
Source record: 126886

Whether or not you hear both sides of the conversation on the base side frequencies is entirely up to the service provider. You may or you may not, their option. Here where I am, we hear both sides of the B side (the phone co. or "wireline" co.) and we used to hear both sides of the A side (or "non-wireline" co.) , which is Bell Atlantic Mobile, BAMM. The BAMM service was so terrible that they contracted to junk all their Motorola equipment and had it replaced with AT&T/Lucent equipment. When they had it all completed and cut into service, they shut off the "side tone", I think it's called, and now we can hear only one-sided conversations on the A side. That's life, I guess, at least there's something to listen to.

One more thing, you only hear only one side of the conversation on mobile to mobile calls or mobile to international calls, even if the carrier normally does transmit both sides.

... ArtM

H.R. 514 and H.R. 2369

The bill's intent maybe good, but this bill goes way beyond wireless radio privacy. It can restrict citizens from monitoring their own government services. Foreigners will use unrestricted radio scanners in the U.S.A. There are already existing laws regarding our privacy protection. Privacy is obtained through encryption. The very small amount of terrorist or criminals trying to successfully use radio scanners for crimes does not justify restricting law-abiding citizens from the radio spectrum. Other countries will profit in the manufacture of unrestricted radio scanners, except the United States of America. Other countries will have the freedom to use unrestricted radio scanners, except the United States of America. Removing the radio spectrum restrictions, for law-abiding citizens, on radio scanner manufacturing is the needed amendment to these laws.

You should realize the radio-scanning hobby does our society good. Radio scanners are a way to fight crime and can be used for personal protection. For example, services instantly heard on a radio scanner regarding emergencies, crimes, accidents, etc. This is the fastest way a citizen can get time critical information. Thus, citizens can better protect themselves and better assist our government.

For those people that are in the amateur radio "hobby", that tweak radios, find other radio systems creating interference, listen for violations of the Federal Communications Commission rules, and conduct radio experimentation, the unrestricted radio scanner "hobby" would be a cheap and effective "testing tool" for maintaining radio compliance. That means any radio network, i.e. cellphone tower sites, can malfunction and cause interference in other parts of the radio spectrum including the amateur radio spectrum. The unrestricted radio scanner would be an economical "testing tool" to check amateur radio equipment to make sure it does not cause interference to the cellular phone radio spectrum.

For volunteers and government workers, the radio scanner "hobby" is used on duty and off duty to keep up with on their own services and as a mutual aid tool to listen to surrounding services outside of their jurisdiction.

For the average citizen concerned about "eavesdropping" from the radio scanner "hobby", then more "sensible solutions" are the new 900 MHz spread spectrum cordless phones that stops "eavesdropping" and wireless encryption. Our government authorities have the power to "eavesdrop".

If your concerned about your personal secret life and a "eavesdropper" makes it public to others, then you can use existing laws to punish that person.

Another more sensible solution is to require warning labels on unencrypted wireless phones.

The one thing that is flawed about HR 514 and HR 2369 is that it restricts American radio scanner manufacturing and the American radio spectrum. Thus, a citizen that has an amateur radio "hobby" is restricted by these new laws and we can use unrestricted radio scanners as a "testing tool", not a "eavesdropping tool".

Another flaw is that foreigners will use their unrestricted radio scanners in the USA. It is for restricting Americans not foreigners.

Imagine if laws were passed, just after the invention of radio, restricting citizen's reception to parts of the radio spectrum. There was wireless radiophone networks and radio receivers for the public before the development of cellular and scanners. They could have stopped the citizen's way back then, but it would have been wrong and un-American. The basic principles of freedom of the past should apply today and in the future.

Do not let the terrorist or criminal excuse scare you into giving up much more of our freedom. We know who used fear, scare tactics, imposed information censorship, and made almost everything illegal to their own citizens. The result was World War II and other past wars.

In many areas of our country, state governments have been making new laws to keep the live press away from police operations. It is information censorship. That means a citizen should not see what our government services are really doing. That does not better serve the citizens. The police are not unprotected without these laws. The same thing for scanner laws. That means a citizen should not listen to what our government services are really doing. What you see our government really doing and what you hear our government really doing is slowly becoming illegal.

To save taxpayer money, does our government control its own government use of costly private radio networks, i.e. cellphones? Sometimes they can easily use their own efficient government radio networks instead. Sometimes they can easily use cheaper wired phones instead of wireless phones.

These letters say it best.
Against HR 514 Example Letters

Write to Congress, but much more effective are contacting Freedom Organizations (i.e. ACLU, EPIC, EFF, etc.) and getting the message to the media of their district.
The Proposed Bill
Write to Congress
Search Newsgroups Comments

This is part of the group of House Representatives that are currently anti-scanner and leaning toward wireless and Internet information censorship.
The Subcommittee on Telecommunications, Trade, & Consumer Protection

More then the concerns of "eavesdropping" are the concerns that these type of restricting radio spectrum laws will cascade more and more into wireless information censorship. The subcommittee mentioned above is also involved in making laws for wired Internet information control.

This is a recommendation. I am not a lawyer, but maybe government people can understand it.

Recommended amendments to the Communications Act of 1934.

(1) Remove the restrictions of the radio spectrum on radio receiving equipment for law-abiding citizens.

(2) Protect by law, the ability of law-abiding citizens to receive and decode non-encrypted analog/digital radio communications of Federal or non-Federal Government services.

(3) Protect by law, live broadcast by news media of Federal or non-Federal Government services in operation.

(4) Restrict the use of radio encrypted communications by Federal or non-Federal Government services to be used only for special operations or personal data. No radio encrypted communications allowed for emergency or routine dispatch by Federal or non-Federal Government services.

program, but would like to see it run and mess with it before I lay out over $100.00 for the program. Any suggestions?
Thanks,
Gerry

There's no demo available for Probe, but I've been using it for over a year and have not found anything better for the Opto boards. It's a DOS program and will run just fine in a Windows DOS box, but also works great on that old 286 you might have stashed away. My 2006 clicks along nicely at 50 channels a second. Probe does a lot of stuff like import database files directly from the Percon CD-ROMS, allow you to set alarms, create smart banks for commonly used frequencies. You'll never run out of room for frequencies, either. It's a really nice rock-solid program.

All of Dade County uses Q signals instead of the 10 signal system. QSL means the same thing as 10-4 (or OK). The best source of info about S/Fla is the Scanner Dude. He has a book and in it is a page on the Q Signal system.

Happy Hunting

2065. Re: Freq used by CHP "Air Force"?

Newsgroup: rec.radio.scanner
Date: 1999-02-20 00:00:00 UTC
From: garretw@aol.com
Message-ID: <19990220132416.07265.00000671@ng21.aol.com>
Source record: 126947

The CHP uses 42.340 (BLUE-simplex) for air-gnd comms. in the N. Cal area. 45.02,45.86, and 45.94 have been listed as air-ops, speed enforcement freqs. however, I havn't heard any traffic on those freqs yet. I 've monitored/seen them at I-80(Shingle Springs-Roseville), I-80(Sacramento-Academy),I-80(Red Top-Fairfield) and I-5(Los Banos). You can hear the plane about 30-45 minutes ahead, then when you can hear the cars (ID- Tac-1, Tac-2,etc. you are a couple miles away. The plane will give the car color, lane, speed, and time to the ground units. I,ve heard that if you dispute the citation in court, the citing and spotting officer both need to be present, otherwise the judge will throw the case out of court,(but haven't confirmed that). I've also monitored Oregon HP/SP doing air-ops on the 155.475 (NLMARS) freq.

Hello All:
Currently on my website I have many active WAR frequencies that were being used and still are being used in connection with the IRAQ military action.

Also listed are lists (all current!) of DX show schedules, Broadcast schedules of Middle Eastern Shortwave Broadcasters of Military Interests.

Also included are some other useful links and frequencies for Scanners, SWL, Util, Military, Marine, and Aviations.

Please check it out at http://www.flash.net/~av8tor/radios

Thanks,
George

2074. Help with Discriminator Tap on PRO 2022

Newsgroup: rec.radio.scanner
Date: 1999-02-20 00:00:00 UTC
From: lyndx <ml488740@nassaulibrary.com>
Message-ID: <7an6jk$c86@mail.nassaulibrary.org>
Source record: 126956
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I had a discriminator tap put into my scanner and since it was installed the squelch no longer works properly in these two situations: 1) when using the tap and 2) when using the SEARCH mode with or without the tap in use. The squelch does work when using the SCAN mode but is not as sensitive as it used to be before the tap was done.

Question:
Is there any way to get the squelch working properly again without removing the tap?

Hmmm.... so you are saying that these people who have been working around the AN/SPS-40 and AN/SPS-49 radars for 20 years should be dying of cancer right now? Compare a candle to a search light and you have about the same power ratio as a cell phone to one of these radars. And no, don't give me any crap about them being "inside". If you look, you will notice that many of the installations have beam paths that go directly through manned topside areas. The signal density is so great that you cannot operate as video camera or tape recorder anywhere near them with out having it get messed up by the signal. I even had a camera that kept having the flash set off by them. I would expect the number of cancer cases to be ASTRONOMICAL right now if this were a hazard.

No demo but Probe works fine for me. I
did find in deferance to the other post,
that Probe runs too slow on a 286, OK on
a 386 or better. IMHO it is worth the
money. In addition to the other post you
can input CTCSS, location, service,
city, county, lat, long, callsign &
more.

The tap is before the squelch and audio circuits. This is so no filtering takes place to interfere with the data you are trying to decode. The volumn and squelch controls will still work with the speaker, but have no effect on the discrim. output.

Just power it off the 12v dc jack, the radio will run much cooler and live longer, if you must have ac then just swap out the 220v transformer with a 110-120v one. You can find them hanging on the rack in a Rat Shack store. Pick up a ac power cord at the same time and your set. No problemo!

I'd add that the exposure is actually much broader than that. The
police and military have been using handheld VHF and UFH transceivers
in the with outputs HIGHER than cordless or cell phones for almost 50
years now.My guess is the number of people subject to such an
occupational exposure to these devices is in the millions.

While it is very hard to say with certainty that there are no risks,
it is easy to say that the risks cannot be materially above the
'noise' since we just don't have vast numbers of people who were in
the Military or carried such devices in police/fire services dying at
a rate materially higher than the general public.

the only known biological/chemical effects from non-ionizing radiation
are thermal, and you need hefty power densities to produce thermal
effects.

Jeff,
I too have tried to find a simple mobile scanner antenna that will receive well from 33 Mhz to 900 MHz.
The commercial multiband antennas do well an the segments that they are designed to work on, usually around 40/155/460/860 Mhz or so. The performance falls off sharply outside of these bands. A friend tried an "on-glass" type of scanner antenna, and while it works ok the low-band reception is not good below 45 MHz.

I have a scanner in my car and use the AM/FM antenna with an Antenna Specialist Model Mon-67 splitter. While this is not the best, I find that it is good enough for local use and has the plus of not tipping off anyone that you have a scanner (Mine is in the glove-box). The reception will vary from car to car, as the AM/FM antenna was designed for 100 MHz.

Another thought is to use a regular 18" whip. They are small and are inexpensive to replace when lost in the car wash. This is what we use in most of the police cars that have scanners (I am a two-way radio repairman). They work poorly on low band, but then again the local police just want to listen to the next town. They work very well on high band (1/4 wave) and well on UHF (3/4 wave). 800/900 MHz is fair.

Good luck in your scanning endeviors!

Mark/W2MR

Bill;
I've heard NY's DEC on 159.225 in the last few days, but I've found listings on the net for 159.225 also allocated to the Mass State PD's Troop E-Mass Turnpike ops in the central part of the state. It's also used by Indiana's Dept of Natural Resources, but that's listed as used by portables & mobiles, so probably low-power.

As to 159.435, I've found listings for Indiana's DNR as a secondary simplex and as car->car. It's listed in Massachusetts as being used for the state lottery system & by the state Environmental Agency for maintenance at the Quabbin Reservoir. Ever hear of it? Is it somewhere near you?

I know that 159.225 is one hell of a far-reaching repeater system - I'm 40 miles north of NYC and I can hear them in many areas quite a distance from me, and always loud & clear. Funny thing, though; I don't think I've EVER heard anything on 159.435. My guess is that you live somewhere near the Mass border, and perhaps NY's repeater in your area had problems, and propagation is allowing you to hear the Mass radios?

If I hear 'em anytime soon I'll e-mail you. It's a reach that you'll be online reading the mail when/if I send you something, but ???

Is is possible to put a spring in this antenna? I drive a
full size blazer and that would make the antenna about 10
feet high. not good for branches. How about a cb whip
antenna mounted on the rear bumper, would that work?

For Sale: Pro64 400 channel handheld scanner. Triple conversion 800mhz scanner, programmable by computer with optional interface cable. Coverage from
29 - 960mhz. One touch weather. 17 Band service search. 50 channels per second Hyperscan search speed. Potentially modifiable to receive full 800mhz
coverage (see link: http://members.aol.com/noobody/pro64vdc.htm) Note:

It is a
Federal offense to monitor cellular frequencies. Originally $299.99 in Radio Shack
1998 catalog. In "like new" condition, only $150 includes shipping from Houston, TX.

Radio Shack Pro2026 mobile/base scanner (Manufactured June, 1993). 100
memory channels and full unblocked 800mhz coverage. It is the highly
sought
after 20-148A model (see the following link for more information:
http://w5gb.nmsu.edu/kc5kto/base.html#pro2026) and comes with an a/c
adapter,
telescoping metal whip antenna and mobile mounting screws (no bracket).
Ready
to go for desktop (or mobile) use. It is very clean and perfect
electronically, but it
does have some surface scratches as is typical of a scanner that has
been in
mobile use. $150 delivered within Continental US.

Bob Schuman (schuman1@airmail.net) is a commercial aero comms enthusiast like many of us. He has started a MailList called ComAirScan which is devoted to monitoring of commercial aviation comms both VHF and HF. He has given me permission to make this posting and to invite those of you who enjoy commercial air comms to join the list.

To subscribe to the list:
If you have already registered at Onelist.com, send a message to ComAirScan-subscribe@onelist.com.
If you have never registered at Onelist, go to http://www.onelist.com and fill out the registration for that allows you to subscribe to one of the many maillists there. Then, while at the site, you can subscribe to ComAirScan.

>>Probably Computer aided Dispatch for Police Department.

As someone else said, it is Cellular Digital Packet Data. Essentially, one
or more voice
channels are taken from an AMPS/D-AMPS (the "normal" cell phone) system to
do packet
data. The mobile radios don't transmit except when they have data, and they
all share the
same frequency. The radios (at least the Sierra ones I've used) have a
SLIP/PPP interface
and let you run plain old IP over the air, so you can even browse the web,
etc.

A couple web sites to hit are:
http://www.sierrawireless.ca/ (Sierra Wireless, who make most of the CDPD
radios in use)
http://www.wirelessdata.org/ (Wireless Data Forum, used to be CDPD Forum)

CDPD is pretty scan-proof. It is sold as being encrypted data over the air.
Probably not
the strongest encryption, but it certainly isn't something I would spend a
lot of time working
on breaking.

I don't really know what Motorola's RD-LAP looks like over the air. It may
not be encrypted.

Ted,

I have a hi-top conversion van and put my radio shack mag mount on my
engine hood. There is no place else because the top is all fiberglass.
You could put yours on the hood of your Blazer and it would not be too
high. The performance on mine is still outstanding. It is a great
antennae and only costs about $29.00. Cat. 20-012 and 36" high.

Good Luck
Rick

2131. Re: Two-Way Pagers

Newsgroup: rec.radio.scanner

Message-ID: <u_tz2.3042$P21.2660672@newse3.tampabay.rr.com>
Source record: 127021

If this is a RIM pager, then it uses Mobitex (aka RAM Mobile Data before Bell$outh bought them). The pager (and other devices) transmit in (I think) the 896-901 MHz range (check 899.5125, .5750, .60, .625 first). The towers transmit back at +39 MHz, so check 938.5125, etc. The towers transmit full-time with a sort of "heart-beat" audio pulsing about 60 times a minute, so you should be able to hear them if your pager is in coverage.

As for being tracable, it is possible to figure out what tower the pager is talking to. If BellSouth was sufficiently motivated, they could generate a report of the tower that your pager was talking to at any given time.

But in my experience, they need a pretty big legal or money threat to get them
to do this. Sending some annoying e-mail to someone probably won't get them to do this. I probably wouldn't use one to send a flood of e-mail threats
to the President.

What else do I know about these? BellSouth uses these pagers to trouble-shoot
their Mobitex network since they have a way to display the signal strength and the
current tower. The Mobitex protocol they use is developed in part by Ericsson (of
EDACS fame). Larger versions of the same device are used by MDTs in utility trucks, etc.

These are just my opinions, but a cell site does not have to repeat the signal back out unless it is to another cell phone in the same cell area. The audio gets patched to the land-line and not repeated on the output of the tx frequency. Why sometimes you here both sides may have something to do with newer phones triggering the repeat audio at the cell site. After all how could Big Brother listen in if they could only hear just one side of the call. Again just my opinion.

>Bob Bonchak

yes, I've got one.

don't know where the manual is, but
what is it u need?

anyone reading this want to buy it?

it's heavy....compared to today's
stuff, but it's a charmer...an antique
that works....

grove enterprises says they have manuals
for all scanners presently and oldly,so
give bob grove a call at his web site

bill conduit
etc.

Source record: 127031

Goodday,

I just bought an old cristal scanner in order two connect it with my computer and further to decode signals with pocsag and DOS-related programmes.

The scanner is capable of receiving the necessary frequencies, but my question is how to tune to an exact frequency, for example 166.750.

The scanner is a puma 1000.

I am grateful for answers you might have.

Greetings,

Roald Kooijman, Enschede, Netherlands

900 MHZ BAND FREQUENCIES

Many of today's 900 MHz cordless telephones offer digital encryption
or spread spectrum technology. Either of these systems will render
the reception of the conversation by an ordinary scanner impossible.

Taken From Panasonic KX-T9000 60 Channel Model

Base: 902.100 - 903.870 Base frequencies
Handset: 926.100 - 927.870 Handset frequencies

(30 kHz Spacing)

CH	BASE TX	HAND TX	CH	BASE TX	HAND TX	CH	BASE TX	HAND TX
01	902.100	926.100	21	902.700	926.700	41	903.300	927.300

2160. Re: Trunk Tracker Question Need some help

Newsgroup: rec.radio.scanner
Date: 1999-02-21 00:00:00 UTC
From: Bill Powell <william_d_powell@fmgc.com>
Message-ID: <JP4A2.295$g%1.1440@news5.ispnews.com>
Source record: 126800

When you scan the conventional way you have to tune out (just press the number key associsated with the bank your trunk is saved in say "5" to toggle off/on that bank) or you will get some hits on freq in your programed trunk system.

Stoli126 wrote in message <19990221222306.10153.00001188@ng-cg1.aol.com>...
>I just purchased a new radio shack mobile trunk tracker I need some help
>please Is it correct to assume when and after you program your trunk
>tracker frequencies into the banks and then switch to conventional scanning
>are these trunked frequencies part of the 150 Channels that I am allowed
>to program So the question is do yuu just lock the trunk tracking banks
>out when go to cohventional scan mode

Hi

Does anyone know of any mods for a Radio Shack PRO-50 scanner.

That will allow it to receive signals in the 54 MHZ to 88 MHZ range.

Please post to this group rec.radio.scanner

or email me at: dsjodin@home.com

Thanks

Mike....

HamComm-Modem is NOT programmable.
You can ONLY program the serial-port-functions.
The "modem" is only avery simple analog/digital converter-circuit.

if you have 2 antennas just run 2 jumpers one from each antenna into a 'T' connector and run one cable from the 'T' to the scanner.. that is the only way to do it other the putting in a coax switch and switching between them.

2179. Trade for BC235XLT or Pro90?

Newsgroup: rec.radio.scanner
Date: 1999-02-21 00:00:00 UTC
From: Jeff <scanner@accessus.net>
Message-ID: <36D031F2.62A36F72@accessus.net>
Source record: 126845

Hello,
Would anyone be interested in trading a BC235XLT for my PRO 51.
It was bought about 1 1/2 years ago.
But it was brand new from Radio Shack date code 11A3. (keyboard mod
works)
I live in a small town and the RS still had a pre 94 model.
Have a manual, antenna, and the glove leather case.
Thank you.
Jeff
PS. I have excellent on-line references.

> -----------== Posted via Deja News, The Discussion Network ==----------
> http://www.dejanews.com/ Search, Read, Discuss, or Start Your Own

As near as I can figure, this is the connector / wires for the
speaker/earphone jack.

_IF_ it is one end of CN6, then it goes to Pin 5 of IC 6 and one side of
C137 or 'hot' side of the earphone jack.

_IF_ it is the other end of CN6, then it goes to Ground & one side of
the speaker or the Ground side of the earphone jack.

I have not opened my AR-1500EX to look, but if I get some time, and feel
brave, I will do that & let you know.

\s\ Robert

2188. TRADE PRO-64 for base scanner

Newsgroup: rec.radio.scanner
Date: 1999-02-21 00:00:00 UTC
From: W8EMS@webtv.net
Message-ID: <3483-36D039E1-3@newsd-124.bryant.webtv.net>
Source record: 126854

I have a Pro-64 with ac adaptor that I have used as only a base. It is in like new condition with manual and box. I would like to trade it for a comparable base scanner.

Please don't waste your time and mine by offering me older non-800 scaners. The number of channels, say over 100, is not important, and neither is cell reception. It must be a "comparable" scanner in good condition.

Please e-mail any replies as I may not get back to this newsgroup for a while. Thanks.

W8EMS@webtv.net / Jim Wardrip

Source record: 126858

CTCSS - continus tone coded squelch system.
Also refered to as PL which I believe was General Electric's version called "Private Line" These are audio tones that are generated by an encoder in the transmitter and transmitted along with the audio. There are 38 standard and several non standard tones, mostly below 250 Hz. As most commerical radios have filters to remove tones under 300 Hz you don't hear them on the receiver - thus the term subaudible tones. (note: some scanners don't have these filters and the PL tones will sound like a low buzz)

In the receiver there is a decoder such as you have in your scaner, which when activated, will keep the radio squelched until a signal with the proper tone is detected. If there are several users on one frequency, each using a different tone, they will not hear each other's traffic. Very useful for business channels and taxi services.

The same tones are also used to activate repeaters. Receivers are encoded so that mobiles from distant systems do not get retransmitted on local repeaters. In my area we have police departments two counties apart that use the same frequency. One county has some very high hills that will allow cars from one county to interfear with the other's radio. Since both departments are on different tones, they can't be heard by the distant repeter and there is little interfearence.

You can do the same with your scanner if there are several users of the same channel, or you get a lot of interfernce on a certain frequency. The only catch is knowing the right tone to use. If your scanner will scan through the tones, then it is a simple matter. If not, it's just trial and error.

DEC frequencies are re-used all over the state, with different PL tones on different repeaters.

Basically, none that can be heard directly. They use the low-power AM UHF channels as backup and for internal mission communications in orbit (suit-to-spacecraft-to-suit). Most shuttle voice communications are multiplexed onto the digital S-band signals that are relayed via TDRS.

Dave,

Since you seem to be an AR-3000 afficianado, perhaps you can tell me what would be a fair asking price for an AR-3000, not the A model. The radio is in excellent condition, but my friend doesn't have the manual or brackets.

2198. New RedShift CE-232 Software for Windows

Newsgroup: rec.radio.scanner
Date: 1999-02-21 00:00:00 UTC
From: rsmerker@steaksandwich.com
Message-ID: <7apo6ocun1@nnrp1.dejanews.com>
Source record: 126864
Cross-posted to: alt.radio.scanner,rec.radio.scanner

We just released a new scanner control program for the CE-232 interface called RedShift. It has features normally only found on Opto compatible products, such as Live Lookup, Full compressed audio recording (Only 6MB/Hr!), complete database frequency management, Real-Time Audio Spectrum analysis, and great limit search feature support. And with a powerful scripting language, and unlimited scanner configuration storage and programming - It is everything you have come to expect from Computer Scanner Control. All packed in a handsome Win95/98/NT compatible interface.

And with the Wintone PRO plug-in DLL (Available separately in Mid-March), RedShift will have all the tone decoding features of Wintone PRO (DTMF,CCIR, CTCSS,Motorola QuickCall and QuickCall II Paging, etc.) - All from within the scanner control software itself, all using the sound card - No Additional Hardware required.

For more info check out the RedShift page at :

http://www.steaksandwich.com

For Information regarding the Opto 456/535 release of RedShift, email us at: support@steaksandwich.com.

I will keep that in mind.
What I would really like to do is to find a way to use a cb
whip antenna mounted on the rear bumper. that way I can use
one antenna for both. I don't know if a whip cb antenna will
work good for scanner. Also need to know if there is a
spliter that has the ends that I would need to do this.

guys at the radio shack near me don't know anything about
scanners. when I asked about antenna, they said they do not
stock any. I looked around the store and found them myself

You would think that substituting the decade for the letter "A" would
make a more useful separator. i.e. 3A4 would become 384 if the unit
was manufactured in 1984.

I don't think anyone doubts about the transmitter power that you wrote about,
but never before was that transmitter power directed in a beam toward the
ionosphere to excite the flow of electrons orbitting the earth.
The results of this action (never seen before) is what everybody is waiting for
(and fears).

John,

I really don't know. I think you can still get a new one for about $1050.00. You might wan't to check the Grove Radio website. They supposedly keep a list of used radios that they have for sale and you might see some listed. By the way, mine did not come with the mounting bracket. It was sold as an accessory.

Radio Shack Pro2026 mobile/base scanner (Manufactured June, 1993). 100
memory channels and full unblocked 800mhz coverage. It is the highly
sought after 20-148A model (see the following link for more information:

http://w5gb.nmsu.edu/kc5kto/base.html#pro2026) and comes with an a/c
adapter,
telescoping metal whip antenna and mobile mounting screws (no bracket).
Ready to go for desktop (or mobile) use. It is very clean and perfect
electronically, but it does have some surface scratches as is typical of
a scanner that has been in mobile use. $150 delivered within
Continental US.

: Just power it off the 12v dc jack, the radio will run much cooler and live
: longer, if you must have ac then just swap out the 220v transformer with a
: 110-120v one. You can find them hanging on the rack in a Rat Shack store.
: Pick up a ac power cord at the same time and your set. No problemo!
Another approach is to call Tandy national parts and order the replacement transformer for a PRO-2006 scanner.
This will of course, fit perfectly and match electrically with the scanner.
As for the power cord, either swap it, or just put a USA power plug on the old cord(or use a plug adapter on the old plug).

The Bearcat III I had was not programable.
You installed a crystal for each frequency you wanted to hear. Maximum 8 crystals. The switches on the front panel switched the crystal into or out of the scanning sequence.

Hallo.

Wie ich beim verfolgen der Diskusionen ï¿½ber FMS-Software erfahren habe kommt es bei den einzelnen Programmen auch auf die jeweilige Konfiguration an.

Ich Verwende einen AR3000A Scanner mit einer alten Soundblasterkarte zusammen mit WIN-FMS. Leider ist die dekodierrate nicht 100%.

Jetzt habe ich auch die Demo von BOS-Control getestet. Die Demo lï¿½uft bei mir sehr gut.

Ich mï¿½chte mir jetzt aber nicht zusï¿½tzlich die Vollversion von BOS-Control kaufen.

Wenn es jemanden gibt bei dem die Vollversion von BOS-Control nicht die erhofften Ergebnise bringt, der aber gute Erfahrungen mit der Demo von Win-FMS gemacht hat kï¿½nnten wir die Programme tauschen.

Aus Urheberrechtlichen Grï¿½nden tausche ich das Programm nur mit dem ersten der zum Tausch bereit ist. Wenn der Tausch gelaufen und somit jede weitere Anfrage vergeblich wï¿½re, gebe ich es hier bekannt.

Ich bitte um Antwort an meine E-mail-Adresse.

m.f.G.

mount
> antenna?

Not if you want good reception on both radios. First of all, if you want to use both radios at the same time, you will need a signal splitter which will add add least 3dB of loss (loss of 50% of signal). The splitter also must have filters to prevent birdies and other radio noise produced by each receiver from interfering with another. Second of all, a well designed CB antenna is optomized its band (27 MHz), instead of beign designed for broadband usage across the vast spectrum used by scanners (30-900 Mhz). Your best bet would be to use two separate antennas.

>The Bearcat III I had was not programable.

Mine wasn't either. This was my first scanner and I still have it and looks and sounds as well as it did when I bought in, I think 59 or 60. If you open it up you will find 2 circuit boards that hold the xtals and are about 1-1/2 X 3-1/2 in size and secured to main board by screws (no Solder) These boards dictate what frequencies this radio can receive and the boards were optional , I believe the options were VHF Lo, VHF Hi, UHF and I think the air craft freqs. If there are no xtals in it to help identify these boards let me know as I have all but the aircraft one and maybe we can do an e-mail comparison. The last time I looked (about 3 yr ago) RS still carried Bearcat xtals via special order and were 3.95 ea.

See ya,, Rob

I currently have an older VTech 900Mhz Digital. I haven't been able to find it with my 2042, but I don't have a Scout or anything (maybe later:P). Is this phone secure? Now, on to my question... I'm going to replace all the phones in my house. I remember reading something here a while back (in a "2.4Ghz Panasonic not secure" thread) about a phone "system". Seems to me the base was purchaced, then you bought as many handsets as you needed. I've searched DejaNews but I can't find the name or maker. I understood at the time it was just about the most secure system available. If this isn't the answer then what can I get that's better? I'm not trying to dodge the pros or hide from big brother, just talk without people like me hearing me (or at least make em work for it). Thanks all...

In this regard, upper UHF, SHF and EHF are known and documented to cause heating and potential damage to certain parts of the body. Specifically, the eyes and the testes are the most sensitive. The damage is mostly due to heating in the cellular structures of these organs. Anything changing the DNA structure of a cell is considered to be mutagenic. I can see where heating can cause an increase in this activity, since greater energy can aid in any molecular reactions that occur. Police radar operates at around 10.150 Ghz (x band) and 24.150 Ghz (k band). Sorry, don't know the Ka band freq. Cell phones, on the other hand, operate around 870-900 Mhz and the PCS phones operate near 1.9 Ghz. Of note is that the upper range of the EHF band approaches the frequency of Long InfraRed.

With regards to the military radars I mentioned in my last post on this thread, the primary hazards (other than geting inside the HERP (Hazardous Electromagnetic Radiation for Personnel) range or getting hit by the antenna, is coming in contact with metalic objects that have high voltages induced on them due to coupling in the antennas near field or acting as an unintentional antenna. This is why the Navy has a vigorus EMI (Electro Magnetic Interferance) program. Before modifications, some ships had EMI problems that were so bad that the steel cables in the lifelines would produce auras from the energy that was induced in them. Sort of like St Elmos fire. This is one reason the Navy switched to Kevlar cables.

Anyway... enough rambling. This thread should die now.

Laterz....

Source record: 126934

You use that frequency as a cheap "CHP locator". I noticed that since the extender freq. uses such low power, that if you drive on the freeways in CA alot, you can just listen to that freq. When you come within about 1-2 miles of a CHP vehicle you will start hearing radio traffic. You would then slow down (if you were speeding) and just look for the vehicle. This works great for my trips to Las Vegas. The trick is that this only work if there IS radio traffic to be heard.

Just another observsation.

Mike

Cross-posted to: rec.radio.scanner,alt.radio.scanner

I am interested in digitally recording my scanner audio via computer. I would like the audio to be stored on my hard drive. I would like to capture a limited number of hours of audio before manually deleting it or (ideally) having it automatically write over the old audio with new.

For those of you familiar with Dictaphone "call check" devices or similar, this is what I am trying to simulate.

I imagine thas this is possible by somehow using a sound card and some software. Has anyone done this? Recommendations would be appreciated.

Thanks,

Tom

2254. PL's Needed

Newsgroup: rec.radio.scanner
Date: 1999-02-22 00:00:00 UTC
From: redog31@aol.com
Message-ID: <19990222155921.01140.00001597@ng-cc1.aol.com>
Source record: 126688

If anyone has the PL tones for the following frequencies, please email them to me. There are varies other users on these frequencies and it is hard to monitor w/o the PL's. All of these are from the Southern California area and can be heard in the San Fernando Valley area.

464.77500 Northridge Fashion Center- Mall Security
461.76250 Unknown Department Store- Loss Prevention
464.87500 Unknown Department Store- Loss Prevnetion
460.91250 Unknown Department Store- Loss Prevention
462.57500 Volunteer Arson Watch for Los Angeles Area

Also, if anyone has any Loss Prevention, Security Patrol, Disaster Communications, or other interesting frequencies that are within the 440MHz to 475MHz band, please email them to me. Please send only those that can be monitored from the Southern California area and those that are not listed in Police Call, METROSCAN, or ScanFan. Thank you and happy monitoring.

No, but then again, neither can HAARP.

> >Ever calculate the amount of RF output from one of our western
>>mountaintop radio/TV sites?
>
>True, but that's omni-directional VHF and UHF, and lacks power to penetrate

Not always, and as I said, there's a LOT of power on some of those
sites, and it covers a broad spectrum of frequencies. The fact that
it's omni has nothing to do with anything, anyway. A watt of ERP is a
watt, no matter how it originates. The omni antenna just irradiates a
larger area, and so is potentially even more hazardous than a directed
beam.

>>Ever heard about the inverse square law?
>
>That's exactly why HAARP is trying to excite the plasma in the earth's

I don't think the laws of physics are going to be quite that easy to
circumvent.

Taking boat trip down the Mississippi from Memphis to New Orleans.
What would be the freqs. to monitor for marine traffic and/or do they
change with area of the river? Thanks.

2258. F/S: Realistic Pro-43 + many accessaries $275!!!

Newsgroup: rec.radio.scanner
Date: 1999-02-22 00:00:00 UTC
From: casper@superlink.net
Message-ID: <7asise$70l$1@earth.superlink.net>
Source record: 126692

Hello Everyone!

I have a Realistic Pro-43 handheld scanner for sale. It is in excellent condition. There was a modification performed enabling this unit to receive full 800mhz coverage. The manual, box, and rubber duck antenna that came with unit is included.

****Please note: It is now illegal to monitor cellular and cordless phone frequencies in the United States. If you decide to purchase this scanner from me, please adhere to all laws governing the area in which you choose to monitor.****

This unit is also being sold with the following accessories:

Austin Condor "Rubber Duck" antenna
This is a 1/4 wave bnc antenna optimized for the 150, 450, and 800mhz spectrum. It stands 12 inches tall (no jokes please).

Trident GAas Fet pre-amp (uses 9volt battery)
This is a low noise signal booster that attaches to the bnc antenna connection on top the scanner. Works very well pulling in weak signals. The pre-amp has a knob that can be manually adjusted to increase or decrease gain.

Portable Pocket Bank Pak
This is a portable and convenient system where you may bring along a "hard copy" of frequencies stored in your handheld scanner. This bank of cards was specifically designed for a 200 channel / 10 bank scanner. The Bank Pak is new and has never been used.

Archer 9 volt AC wall adapter (Radio Shack cat.no. 20-188)
This AC wall adapter not only powers the hand held unit, it also charges ni-cad batteries if used in battery compartment. The Pro-43 has 2 jacks for the AC adapter. One is to simply power the unit (with or without batteries). The second is to "both" recharge batteries and power the unit. Please make certain ni-cad rechargeable batteries are installed inside unit when using the charge jack!

The Realistic Pro-43 handheld scanner scores a 9 out of 10 for appearance. The scanner however is in absolute perfect working condition. You won't be disappointed by its' performance.

All the accessories score a 10+ out of 10. With the exception of the Bank Pak, the scanner accessories were very rarely used. They just added too much bulk for something that is portable.

The total price (includes shipping and insurance within the U.S.) is now $275.00 or best offer. The items listed are being sold together as a package and cannot be broken.

Please e-mail me for questions and pictures. Serious inquires only please. I will not even consider sale until we exchange address and phone numbers!!! All items are sold as-is. Please send for pictures. You must have an idea of what everything looks like. I have a close-up of the scanner so you'll know what the condition of appearance is.

Thank you all for your patience. I know this was a very long posting.

Jim Wardrip, W8EMS wrote in message
<3483-36D039E1-3@newsd-124.bryant.webtv.net>...
I have a Pro-64 with ac adaptor that I have used as only a base. It is
in like new condition with manual and box. I would like to trade it for
a comparable base scanner.

Please don't waste your time and mine by offering me older non-800
scaners. The number of channels, say over 100, is not important, and
neither is cell reception. It must be a "comparable" scanner in good
condition.

Let me get this straight. You want an 800 - MHZ capable scanner, that is a
base, that doesn`t do cell phones, in exchange for your pro 64. Please don`t
do that while I am taking a sip of my coffee. You made me blow coffee out my
nose !

Please e-mail any replies as I may not get back to this newsgroup for a
while. Thanks.

W8EMS@webtv.net / Jim Wardrip

That's funny...

When I spoke to Uniden a few months back they told me that "Our marketing dept. found that there is little demand for 900 Trunked scanners, therefore we don't incorporate 900 trunking in our scanners that cover the 900 Mhz area. Research has shown that there are few companies changing over to 900Mhz from 800Mhz(guess they haven't heard about Nextel forcing users to change systems) and that is why we will NOT be offering models that scan 900Mhz Trunked systems".

Maybe Uniden finally got a clue? In SLC we have at least a half dozen 900 systems to follow.

I think what may have been quoted to you was for shipping & handling. That pays
for the shipping personnel and helps keep the coast of item down.
The best thing to do is price check different dealers and total price to you,
cost of item, s&h plus any cod or other charges and then make a decision.
I buy a lot across state lines and that saves me an additional 8.75% sales tax.
The final item, are you happy with your purchase?

hello

i just purchased a new yupi handheld. i am a bit perplexed as to what kind of reception to expect. i live in a small city (45000) on the edge of a large city (500000+). so there are plenty of signals bouncing around. i know not everything will be perfect, but i can hardly get the AM radio stations in clear, same for FM stations. i can get some stuff in but it is noisy. should i give it some time, until i learn the techniques of scanning, or is there something wrong, perhaps do i need a different scanner.

thanks

i was wondering if anyone has ordered from javiation, and what if any custom charges did you have to pay? Also, i would like to know of anyone ordering and having the customs "take" it, like, you know, you did actually get it.... has this happened to any of you?

According to <http://www.eurocontrol.be/projects/eatchip/vhf833/>, the planned date for seven European countries is 7 October 1999. As far as I know, the FAA has not started the official process that would be required for 8.33KHz spacing to be required anywhere in the US.

2281. <TRADE> Hot music gear (synths & more) for ham/scanner gear!

Newsgroup: rec.radio.scanner
Date: 1999-02-22 00:00:00 UTC
From: redmac@rconnect.com
Message-ID: <redmac-ya02408000R2202992344390001@news.rconnect.com>
Source record: 126715

Ok... I'm shedding my excess gear so I can concentrate on what's left!

I will accept cash offers (reasonable, please!!!!) but I'm more interested in shortwave/ham/scanner gear in trade. I would be very interested in trading a bunch of this gear (or all of it, in fact) for a top notch receiver (or transeiver)... you're not using that Icom 8500 anyway are you? :-)

So here's what I've got:

* Korg Prophecy - Virtual analog keyboard with all sorts of knobs and such... very cool! A few scuffs but great shape overall. Manuals and power cord included.
* Roland MC202 - Mini analog synth and sequencer. Almost perfect shape with manual and power supply.
* Roland TR808 - Classic Roland beat box! Booooooommmm... :-) Good shape... some wear but above average overall. Manual included.
* Roland MSQ100 - MIDI sequencer. Near mint with manual and power supply. Used for syncing your MIDI gear and older Roland gear.. like a TR808 and MC202! :-) Will throw in sync cables if bought with either or both of those units.
* Roland CSQ100 - CV sequencer. Good shape but no manual... :-(
* Zoom Studio 1204 - Single rack space multi-effect unit. All the usual effects plus vocoder! Manuals and power supply included.
* Emagic Unitor 8 - Rackmount PC/Mac midi patchbay (8x8) with sync. This one will take care of just about anything you can think of! Perfect with manual, software and power supply.

Let me know what you've got and perhaps we can work something out! E-mail with any questions or comments! All sorts of references available if you're interested!

Thanks!

mark

For what duty cycle ? Any radar can throw out huge pulses of power in nanosecond bursts. But, can a radar transmit CW in the giga-watt range ??? Can you say fried finals?

>Ever calculate the amount of RF output from one of our western
>mountaintop radio/TV sites?

True, but that's omni-directional VHF and UHF, and lacks power to penetrate a dense medium (like the ionosphere or into the depths of the ocean).

>Ever heard about the inverse square law?

That's exactly why HAARP is trying to excite the plasma in the earth's ionosphere: so that it can create an electromagnetic reaction that AMPLIFIES the original carrier wave. If it can do this, you can flush your RF inverse square law down the toilet. Think of it as a radio wave nuclear reaction: it keeps going and going and going.....

Hi Ken .....
I have the software from an (now defunct) company that used a
slicer type circuit for their product. This software will let you see
, with a scope display , the output of your slicer circuit. It was
used for adjustment and setup. If you want a copy of
this software ..to use to check your slicer ..I'll
be happy to send you a copy. I'm not worried about people using
this software because the company is defunct and it can't
be used as originally intended without a special slicer
that no one has. It is ..however ...perfect for set up ,
level adjustment and testing of slicers ...

contact me at a_alpha1@pacbell.net
a_alpha1@i.am

>out when go to cohventional scan mode
>HELP PLEASE THANKS VERY MUCH

Yes... the trunk channels are part of th 150 allowed.

I put one trunking system in each bank of 30 frequencies... When in
conventional scanning mode, i simply do not scan that bank. I keep one
block available for conventional scanning.

I have also heard, though, you can simply lock out each individual
trunked frequency... the trunking function would still function...
haven't tried that though.

I think I remember reading a web page about this. Someone was
beaming kilowatt-range radio waves into the ionosphere to study the
effects, and there was concerne that this would destroy the ionosphere
or otherwise threaten the earth/atmosphere. My response was that there
was much more power radiated by commercial/amateur radio stations than
this experiment to the ionosphere, and it remained intact. Not to
mention the enormous power radiated by the sun all the time...

Yeah, the HAARP Web Page does mention that the sun's solar flare amplitude is enormously bigger than the 1 GigaWatt HAARP transmitter power. The secret is that you cannot control the radio transmission of solar flares, but you can control the modulation of HAARP. For what purpose remains a secret.

I was wondering if anyone had or knew of any place to find modifications for the BC144XL scanner and the BC60XLT scanner. I'd appriciate any help.

GREAT SCANDAL: MILITARY SPY FOREIGNER SATELITTES FOR CIVILS.

After classical swiss electronic interception stations
(R&#65533;thi, Merishausen,...),

http://jya.com/ch-wiretap.htm

Today, the european laws protecting the private life in telecommunications are unvalued.

Swiss army had just received app. 20 millions $ to buy 10 paraboles to intercept foreigner satelittes from Leuken-Baden (Valais) and Heimenschwand (Berne).

Targets : Iridium in Europe,
Deutsche Telecom satellites,
France Telecom satelittes,
Globalstar (1 european ground station: Aussaguel-France)
ICO,
Nescape -Nextel via satelitte and in the future Teledesic,
Italia telecom satelittes, GSM satelittes

New political responsable departement:
DDPS (Defense, population protection & sport federal dpt.)

Informatic system:
Zimmerwald (Berne) selection by word-key or number key.

Protocol amd technic dpt.:
GRS- Groupe Renseignement & Securit&#65533;
(swiss army intelligence). No 1 Peter Regli :
[SWISSCOM can carry out phone-tapping with vocal recognition by regrouping the vocal frequencies typical of each individual. They are recorded on an oscilloscope. This technique first pointed the finger at the superintendent Peter Rengli of the GRS 1993 and it then cleared him, after uranium was illegally transported...]
Peter Regli: "Nothing in the international laws prohibs such interceptions."
http://www.ii-mel.com/interception/armeegb.html

Destinary of such interception:
government, federal police and more problematic: cantonal polices.
The trafic of (economic) infos is legal now.

Doubt you'll get $1200.00...

Radios usually go for $500.00 to $600.00. TV adapter for maybe $30.00 to
$50.00

With some careful shopping and little more than $1200.00 you can get a
brand new R8500.

Regards

Ed

>Anything weird or out-of-the-ordinary?

To the uninitiated, anything which doesn't sound like voice or data traffic is "weird or out-of-the-ordinary." Keep a couple of things in mind: First, when you reflect a plain carrier wave signal off of the Aurora, it comes back with a buzz like modulation. Ask any ham who has worked another station via the Aurora on the 50 MHz band (I have). Morse signals come back sounding raspy, and if you can get a single sideband signal to work at all, it will sound as if the guy at the other end is hoarse.

Meanwhile: have you ever heard of the "Luxembourg Effect?" Have you ever heard of the "Woodpecker" OTHB RADAR? Powerful and focused radio waves have been beamed at the ionosphere before. Your fears as raised by "Angels Don't Play This HAARP" are pretty much unfounded.

I just ordered a BC235XLT from these guys. Great price, but they ream you for shipping. The shipping cost was $19.00 for UPS Ground!!! This cost was given to me before I even told them my location (from Michigan (48106) to Washington (99163)).

I did the cost calculator at UPS' web page, and for an insured 10-pound (this package was surely under 10 lbs) $170 package WITH the delivery confirmation charge was only $8.77. I asked them why their shipping was so high and they said that UPS just raised the rates to residential addresses by $2. That's great - my shipping total still should have been $8.77 or at worst $10.77.

I still think they have the best price even after this high shipping profit they're throwing in there, but it's frustrating to know you're getting lied to and overcharged.

Just my two cents (orfor anyone else that is frustrated with people that claim that their shipping charges cost this much. Should we really stand for this??? I would much rather see the price higher with a realistic shipping rate.

-Travis

>From: frussle@erols.com (Jake Brodsky)

>Meanwhile: have you ever heard of the "Luxembourg Effect?"

Yes, a small radio station in Luxembourg was drowning out all the other radio stations in Europe (even though the other stations were more powerful) because the Luxembourg station's radio waves hit the ionosphere at an exact critical point where its radio waves were extremely amplified by the Aurora.

It is possible that one of HAARP's secret roles may be to use the Luxembourg Effect to drown out all enemy communication (like a global jammer) during war, but be able to temporarily pause global jamming only during friendly communication transmissions.
(Don't worry, I'll stop: this post should continue in alt.conspiracy.theory, anyway).

>Have you
>ever heard of the "Woodpecker" OTHB RADAR?

The Woodpecker was the last great Soviet over-the-horizon radar system, capable of detecting and tracking extremely low altitude incoming cruise missiles. Its radio waves pulsed at the exact frequency that our human brain waves' neuro-system operates at. This created quite a conspiracy: people thought that the Soviet Woodpecker could be used as "mind-control" through jamming our human brain waves.

Really wild conspiracy theories claim that the HAARP transmitter may play around with this idea. I think that one is ridiculous....hahahaha.

But, I don't discount using HAARP as an over-the-horizon radar to detect incoming cruise missiles (which was the original project for that Alaskan site). Anyway, this is scanner newsgroup, we should only be talking about hearing the HAARP CW signal test in March.

>Your fears as raised
>by "Angels Don't Play This HAARP" are pretty much unfounded.

At this point, it would probably take me 10 years to get a Ph.D. in Electrical Engineering - Plasma Physics concentration, where I could understand (and design) "Relative Field (RF) Radio Transmission Electromagnetic Effects on Ionospheric Plasma". So, all I have is second-hand information to read about. But, no one is doubting Tesla, who wrote in his theories that it is possible to use the Aurora in the ionosphere to extremely amplify a radio wave. I believe HAARP is a radio transmitter designed to use the ionosphere for more greater, more powerful, systems
(interesting that the Official HAARP web site still claims that HAARP is completely UNCLASSIFIED).

The stock antenna on the WS1000/2000 is no big deal. It is especially deaf
on VHF, which is no surprise considering its short length. I'd go with a
bigger and more wideband replacement.

It is technically illegal to monitor any type of telephone conversation in the US. However if you do it in private for your own jollies no one will ever catch you, you'll just have a guilty conscience if you choose to feel guilty about it. The only ones who get in trouble are those who go public with what they hear causing someone to file a formal complaint.

A while back someone anonymously (no, it wasn't me :)) taped conversations of a Dallas school board member's cordless phone conversations and sent the tape to some city leaders. The school board member, who had been making a bunch of racist comments, was forced to resign. But whoever made the tape never got caught.

I am considering purchasing an Optoelectronics OptoCom receiver for the following application. I would greatly appreciate any suggestions or comments regarding this. I am in the professional audio business, that is I sell design and install commercial audio systems as well as provide temporary portable audio systems for events. In this business we often provide wireless microphones systems. The trick has always been to have them operate reliably. Aside from having good (wireless microphone) equipment one must be careful to select good frequencies to avoid interference from other RF traffic and from other microphone systems used simultaneously. Aside for hobby use which I am also interested in, I would like to use a PC controlled receiver like the OptoCom or Icom PCR1000/100 to analyze the RF environment prior to an event. At times this may be only a couple of hours in advance other times its a full day or more. Obviously more time is better. A logging function would be great. After this analyzation I can more intelligently select microphone frequencies. My microphone systems are frequency agile and mainly operate in the UHF TV band range. Mostly from channels 60-69. It would be optimum if I could selectively reduce the sensitivity so that I could just see the RF activity in the close vicinity. Our microphone transmitters can have as much as a 50 milliwatts output but 95% are generally less than 10mw. I have several that are 2mw. We do have some systems that operate in the VHF range as well. I know that the OptoCom ships with a basic version of ScanStar. Can I use this or will I need the Deluxe or Industrial versions. Any other hardware or software suggestions.

On the hobby side I would like to follow trunking systems. I know the Optocom uses a different method of following trunking than the typical Trunktrackers. Is it effective enough for general use?

Thanks,

Juan

Anyone know of a repair shop that will do scanner mods on a pro2006? I want a few things done to mine and I am not qualified, and before sending it halfway across the country to someone I don't know was wondering if there was any experts w/in easy driving distance of western, mass (i.e. albany NY, springfield MA, hartford CT, brattelboro VT, Boston MA etc).

Thanks

2330. Yaesu VX5R Mods?

hmmmmmmmmmmmmmmmmmmmmm

1. Cost of box
2. Cost of fluff-fill
3. Cost of mailing label
4. Cost to fill-in label
5. Cost of packaging tape
6. Cost for someone to do it
7. Cost for someone to give it to UPS
8. Profit
9. sales and advertising costs
10. insurance
11. what UPS charges to do it added
12. cost for training the clerk to do all above
geeeeeeeeeeeeeeeeeeeeeez

what a concept.

remember: that 8.77 or 10.77 is what
cost UPS is going for. That's just
one cost.

That's why I look to Lentini Communications. They give you the same or
better price than CE but NO SHIPPING COST! (or a built-in shipping fee which
I feel better about)

For Sale: Pro64 400 channel handheld scanner. Triple conversion 800mhz scanner, programmable by computer with optional interface cable. Coverage from 29 - 960mhz. One touch weather. 17 Band service search. 50 channels per second Hyperscan search speed. Potentially modifiable to receive full 800mhz coverage (see link: http://members.aol.com/noobody/pro64vdc.htm) Note: It is a Federal offense to monitor cellular frequencies. Originally $299.99 in Radio Shack 1998 catalog. In "like new" condition, only $150 includes shipping from Houston, TX.

The 440 (and for that matter, the 430 and 450) are excellent shortwave receivers too! The Kenwoods have a unique feature in that you can select the mode (AM, FM, SSB) independent of the bandwidth that you select. Thus, for a strong shortwave broadcast station with no co-channel interference, you can go into SSB mode and select the 6 kHz filter and enjoy very high fidelity reception (similar to synchronous detection).

The PCS band is from 1850 to 2200 MHz. However, you'll only hear
static, because they're digital.

with my pro-2050 and pro-90, you can just 'lock out' all your trunk tracking programmed frequencies in any given bank. that way when you scan conventionally, the trunked frequencies are obviously ignored. Yes, when you go to trunk track these same 'locked-out' frequencies, the trunk tracking will work.....

From: casper@superlink.net
Message-ID: <7av369$4o1$1@earth.superlink.net>
Source record: 126587

Hello!

I'm selling a AOR-3000A wideband receiver (less cell) that is in perfect condition. No scratches, dings, or dents. It's a perfect 10! SO are all original accessories (antenna, AC+DC power adapters, manuals, + original box and packing materials).

Together with the receiver is a new, still in the box, GRE converter 9001. It is designed for base use and fills in the gap found in the AOR-3000A receiver.

**** Please note: It is now illegal to monitor cellular and cordless phone frequencies in the United States. If you choose to purchase this package from me, please adhere to all laws that govern the areas in which you choose to monitor. ****

$635.00 includes shipping + insurance.

This is the second AOR-3000A unit being sold by me in this newsgroup. The buyer of my previous posting refused the GRE 9001 so I can still offer the converter for sale.

Please send e-mail for further information and inquires.

Thank you all.

I don't think that you need a new scanner, just a better
antenna and maybe a pre-amplifier for your antenna.

Just picked up a new Diamond RH77CA wide-band antenna!

14.5" long, BNC base loaded, with very flexible 1/8" rubber whip element. 2m/70cm for receiving and transmitting, and 120/150/300/450/800/900 MHz bands' receiving for handheld transceivers/receivers. Gain: 2.15dBi(70cm) - Max. power rating: 10W - Impedance: 50 ohm - Connector: BNC. 1/4 wavelength (2m), 1/2 wavelength radialless (70cm), 8 Band coverage (2 amateur bands, plus 6 more bands for receiving.)

I'm trying this out on an Alinco DJ-X10T hand-held, wide-band scanner. So far, pretty impressive!

Decisions, Decisions....
They're all great radios, but my favorite is the 2006. The 2005 and 2006 look the same the 2006 being a faster scanner, but the 2004 has a sloped front end and is a slick looking scanner. The 2006 is the easiest to obtain....there's usually at least 5 of them a week listed on Ebay, and a few posted for sale in the newsgroups on a regular basis. The 05/06 are the easiest (in my opinion) to computer control. You can use either an Opto-456 lite or a CE-232 interface. The 456 is easy to install and runs with a variety of software. I've found parts are easy to obtain for a 2006 from Tandy. I own 2 -2006's and a 2005 and love 'em all. It's starting to become a nostagia thing with this series of scanners. Modding any of the 3 are easily done by clipping or adding diodes, and the mods are freely available on the net.

My $.02 worth.

Dan

I just put up a new website dedicated to scanning in Los Angeles (and more specifically, the West San Fernando Valley). Feel free to check it out. It's not much to look at, but it should get better, and I hope all those in the LA area will visit and maybe give some input.

Thanks!

It is apparent that you are displeased at being discovered. Look, oh commercial entity, it is not working. You can go away now. It has become obvious you are only trying to split and segment the Amateur Radio community. Sorry, not going to happen.

Heck, why don't you just drive downtown Detroit, take the tunnel and buy an unblocked in Windsor. Take it out of the box, throw the box away, and stuff the scanner in your jacket pocket and take the tunnel back. Whole thing takes 30 minutes.

The HAARP Listening Test will transmit at 3.4 Mhz and 6.99 Mhz. I've calculated lamda/2 to be 44 meters and 21.5 meters. This is half wave. Do you think I can receive a good enough signal here in Michigan to use a 1/4 wave dipole? I'll probably be using a Radio Shack DX-398.

I've been reading the spit and snot slinging about the SCPD cop who died in the line of duty. What is wrong with you people? This guy could have died while stopping a rape (on your wife or daughter) and would it have started such word war? Bottom line is someone's son/husband/brother is dead because of what, a mistake or a stupid punk? I served in the U.S. Coast Guard for 20 years. In all my time of being a "public servant" I never was sorry, I made mistakes but did not cause the death of anyone in my line of duty. I will say this, the majority of the public are supportive. A minority, which some of them have showed up here, are AHoles. Yep, I'm retired now so all you shit for brains out there who do not head the warning and stay off the ice or go out when the weather is said to turn to bad to worse, I shake my head in pity. We (public servants) are overpaid, head strong worthless bits of flesh till you need us, then we become your savors. Deny it all you want, you need us and can't live without us. For it is written. Now for the shit for brains who keeps showing disrespect for the law, do us all a favor, don't file a float plan, take your boat out on the high seas, run out of gas in the fog at night in the shipping lanes and get yourself run over.
Thanks.

Sir,

I have the same phone advertised on the art bell show. I tried to scan it with my pro-91. The results were a static and you can barely hear the tones as you press the keys. It could be because I was to close to it but I think since it says digital on it, means just that.

The WS1000 antenna comes from the WS1000 radio. And it's
the same antenna that comes on the WS2000. These two radios
are also known as the Standard AX400 and AX400B.

This radio is not carried in the US due to its cellular
reception. So you need to find a place that carries the
WS1000/WS2000 first (Canada or Europe), and then ask if
they can order the antenna for you.

This is being phased in slowly over in Europe. I think starting this
fall, only for about 5-8 countries and at very high flight levels.
As time goes on, I'm sure more countries will be added and the flight
levels lowered until everyone can comply.

Also heard that FAA in the US is just starting to look at this.

Source record: 126653
Cross-posted to: alt.ham-radio.marketplace,alt.radio.scanner,rec.radio.scanner,rec.radio.shortwave

The Sony ICF-SW77 offers sophistication not previously seen in portable or table top receivers. On the performance side of the equation, this radio offers several useful circuits. A built-in programmable RF tuning unit allows the set to track a signal from the time the antenna first picks it up, while cutting out other signals. This reduces interference. The SW77 incorporates a band pass filter that splits each band into five smaller bands, thus virtually eliminating interference from outside the band. Fifty Hertz tuning resolution permits precise signal tuning for maximum clarity (LCD resolution is 100 Hz). The advanced synchronous detection circuit effectively addresses the two biggest problems on shortwave: fading and interference from adjacent stations. The SW77 is also rich in features. Station Name Tuning is now a reality. 162 memories are available to store your favorite stations including: frequency, name (to six characters) and program times. Sony has preset 94 of these memory channels with the world's most popular SW stations. (You can over-write these factory-set memories). You select the station name and the radio will provide the best frequency based on the current time! The SW77 also includes all the expected features: excellent AM & FM bands, keypad entry, light, bass, treble, LSB/USB, ext. antenna jack, dial lock, S-Meter, manual tuning knob, frequency scanning, dual clocks, five-event timer, etc. Despite its advanced and many features, the SW77 provides a friendly "interface" between the listener and radio.

PRICE
275.00

- 10MHz-1.4GHz frequency range
- Records and saves 400 unique frequencies
- Records up to 255 hits on each frequency in memory
- Records frequencies automatically and unattended
- Patented Digital Auto Filter and Auto Capture
- All frequencies are automatically saved and can be deleted by pressing the clear button
- Recall Mode: View all 400 frequencies and number of hits stored in memory
- Custom ten-digit LCD display
- Automatic EL backlight for night operation
- 16 segment RF signal strength bargraph
- Distinctive beeps indicate frequency hits, and pager style vibrator for discreet recording
- Supplied with NiCad batteries
- AC charger supplied, for 2 hour recharge
- PC utility software supplied for downloading memory into a PC using the optional OptoLinx universal interface

Introducing Optoelectronics' own Reaction Tune function: Scout will

automatically tune the following receivers: ICOM R7000, R7100, R8500, R9000, IC R10, AOR AR2700, AR8000, Radio Shack Pro 2005/6 with Optoelectronics OptoScan456, and Radio Shack Pro 2035/42 with Optoelectronics OS535.

Reaction Tune
Scout Reaction Tune captures the excitement! When connected to a receiver for Reaction Tune, the Scout can capture a frequency and then tune the receiver to that frequency simultaneously. No more manual tuning of a receiver, let the Scout do it for you. The Scout can Reaction Tune the ICOM R7000, R7100, R8500, R9000, R10, AOR AR8000, AR8200 Optoelectronics R11, Optoelectronics OptoCom, Radio Shack Pro 2005/6 with the OptoScan456Lite installed, and the Radio Shack Pro 2035/42 with the OptoScan535 installed.

Input Impedance 50 Ohm
Frequency Range 10MHz-1.4GHz
Sensitivity <5mV 30MHz - 900MHz
Maximum Input +15dBM, 50 milliwatts
Time Between Measurements 10 milliseconds, all range & gate times
Display 10 digit LCD with backlight
Timebase 10MHz setable to +1ppm
RF Signal Strength Bargraph 16 segments, approximately 3dB segments, Relative indication only, No Calibration
Size 3.7"high x 2.75" wide x 1.2"deep
Weight 8.5oz
Battery Internal 4 cell AA 850mA hour, fused NiCads, flying leads
Operating Time 6 hours
Power 9 VDC 1 Amp wall plug adapter for rapid charging, 6VDC 130 mA minimum operating power required, AC90 wall plug adapter supplied
Power Connector 2.1mm coax, center positive

2407. Re: military scanners

Newsgroup: rec.radio.scanner
Date: 1999-02-23 00:00:00 UTC
From: jtward01@aol.com.nospam
Message-ID: <19990223082103.12904.00001435@ng69.aol.com>
Source record: 126655

Charlie,

The most reasonably priced handheld scanners on the market right now that include the 225-400MHz milair band are the Sony SC1 and its computer controlled twin, the SC1-PC.
Next up the ladder is the Uniden 3000XLT, then you have the AOR AR8000, ICOM R10, Alinco and a couple of others.
The least expensive base model scanner with milair is the Uniden 895XLT, but I don't really consider it suitable because you cannot manually set it to AM mode in the 138-144MHz range and there are a lot of milair tactical comms in this range.
The Uniden 9000XLT is the least expensive base scanner that I really consider suitable. As for the cellular images in the milair band on the Uniden, yes, they exist. How troublesome they are depends upon how close you live to a tower. I'm several miles from the nearest cell tower and I very rarely hear an image, maybe once or twice a week, for a few seconds at a time.

>i can hardly get the AM radio stations
>in clear, same for FM stations.

Handhelds typically don't do well on the AM broadcast band. They just don't have the antenna length for it.
You should do OK with FM broadcast stations. Make sure you're selecting WFM mode when trying to receive these.

I think you are being a cheap skate Travis, CEI packs their products very well and also has somebody sign for the package which is a premium service for ground UPS. You knew before hand what the charges were, you had the choice to purchase or pass on it. I think CEI is fair in their pricing compared to other dealers. Just seen the BC235 in the JCPenny catalog for $299.95 and that is not including shipping and tax.

I guess this is the price you pay for better pricing. But too clarify shipping cost at UPS. I too ship almost everyday and the cost recently went up "5%" plus they now rip us off a "DOLLAR" more for residential delievery. Not TWO dollars as Travis was told.. I believe in being honest so I guess I too would have a problem with being told this.

I have done some business with CEI in the past and myself was satisfied with the sale, however I only live 30 miles away and was able to pick up my stuff without a shipping charge.

Just my opinion

Garry

> (this package was surely under 10 lbs) $170 package WITH the delivery
> confirmation charge was only $8.77. I asked them why their shipping was so
> high and they said that UPS just raised the rates to residential addresses

All,

FYI, the full U.S. House of Representatives is scheduled to vote on H.R.
514 tomorrow, Wednesday, February 24. It is likely the bill will pass the
House with little or no opposition. The bill will then be forwarded to the U.S.
Senate, Senate's Commerce, Science, and Transportation Committee.
The members of that committee are:
Republicansï¿½Spencerï¿½Abraham,ï¿½MI; Johnï¿½Ashcroft,ï¿½MO; Samï¿½Brownback,ï¿½KS;
Conradï¿½Burns,ï¿½MT; Williamï¿½Frist,ï¿½TN; Sladeï¿½Gorton,ï¿½WA; Kay
Baileyï¿½Hutchison,ï¿½TX; Trentï¿½Lott,ï¿½MS; Johnï¿½McCain,ï¿½AZ; Olympiaï¿½Snowe,ï¿½ME;
and
Tedï¿½Stevens,ï¿½AKï¿½.
Democratsï¿½include Johnï¿½Breaux,ï¿½LA; Richardï¿½Bryan,ï¿½NV; Byronï¿½Dorgan,ï¿½ND;
Ernestï¿½Hollings,ï¿½SC; Danielï¿½Inouye,ï¿½HI; Johnï¿½Kerry,ï¿½MA;
Johnï¿½Rockefeller,ï¿½WV;
and Ronï¿½Wyden,ï¿½OR.
Any efforts at blocking this bill should now be aimed at these folks.
If you don't know who the Senators from your state are check you local
telephone directories. Most directories list your Congressional
representatives along with their addresses and telephone numbers.
H.R. 514 doesn't appear to have any strong advocates in the Senate, so it
may be possible to defeat it here.

obrien2@idt.net (Jim)
> Just read a post that said its illegal to monitor cordless phones in
> the US i thought it was just illegal to record it

The questions keep coming up, different laws are mentioned, and most replies are of the form "I'll do anything I bloody well please and no law can stop me". The following is a re-post of a short disertation on the various laws and their effect.

The laws of the United States, passed by Congress, are codified as the United States Code (USC). It is divided into titles covering various subjects. Title 18 includes the criminal laws and penalties; Title 47 covers telecommunications. A law can be refered to by its original name (e.g. "The Communication Act of 1934") or its entry in the USC. A specific section would be refered to by title/USC/part/section, e.g. 47 USC 605.
To carry out the law, the various government agencies create regulations, which are codified as the Code of Federal Regulations (CFR). It is likewise divided into titles, with the FCC's rules in 47 CFR.

18 USC 119 bars the disclosure of any electronic communications to which you are not a party (with certain legal exceptions), and sets the penalties. 47 USC 605 (the Communications Act of 1934) also bans the disclosure or use of third-party communications. With minor changes, this has been the law for 60 years.

In 1986 Congress passed the Electronic Communications Privacy Act (the ECPA), which added definitions to the law that banned listening to cellular telephones. It also banned the monitoring of broadcast auxiliary, SCA and scrambled signals.

In 1992 Congress passed the Telephone Disclosure and Dispute Resolution Act (TDDRA), which instructed the FCC to ban the manufacture or import of scanners capable of receiving cellular. In accordance with this law, the FCC modified 47 CFR Parts 2 & 15, effective 26 April 1993. Note that this does not affect the sale of such scanners, so long as they were made or imported before the cutoff date. It also does not bar individuals from modifying their receivers.

On 25 Oct 94, the Digital Telephony act was signed. Buried in one of the additional sections was a change to 18 USC 2510 & 2511 that added cordless phones to the original ECPA ban on receiving cellular.

In short:
It is illegal to manufacture or import cellular-capable scanners.
It is illegal to listen to cellular (and cordless) transmissions.
It is illegal to divulge any communication to which you are not a party.

Now, please - we all know the first two are: 1) stupid; 2) unenforceable; and 3) widely ignored. It is not really necessary to post the obvious to the whole world (unless you have an irresistable urge to demonstrate even less sense than the legislators who enacted them).

Ken,
This is a SHAREWARE program and will cost you $15.00 US. It does not contain a database of current info. You have to insert it yourself.
I have used ILGData for serveral months and can attest for its usfulness for location of frequently updated data for SWLing. It is freeware for non-professional usage.
You must request a free password to obtain the application and all of its databases. The databases are in dbase .dbf format, which makes it easy to import to other formats and applications.
You can get the ILG package at: http://www.ilg.de/ilg-files.htm

Lambda ARC ~ Faggots with a purpose.

ARRL BOD bent over and got screwed by Lambda, and now the ARRL BOD tells the membership to bend over so we can get screwed too. The ARRL has gotten too damn liberal. With their restructuring proposal they want to make all radio enthusiasts one big happy family.

Well I won't associate with Faggots, CBer's, or sick-lame & lazy Morse Code haters. ARRL needs to get back to the core values that Hiram Percy Maxim, W1AW, stood for and quit catering to idiots and candy-ass cry babies.

- .-. -.-

Here's what I've got but this list is about 7 years old.
10-4 recieved 10-54 need coroner
10-7 dispatcher off freq. 10-60 out of service
10-10 in service 10-61 out of service (lunch LPD)
10-11 in service, busy 10-62 building check
10-12 status ok 10-63 out of service (lunch county)
10-19 in the car off duty 10-64 out of service, Hall of Justice
10-20 location 10-65 pick up relief/ give ride
10-21 warrent check 10-66 telephone call
10-22 questionable mental status 10-67 relieve dispatcher (KPD)
10-23 meet with 10-68 return to office ASAP
10-24 woman 10-69 return to office
10-25 subject can hear radio 10-70 traffic stop, request backup
10-26 intoxicated 10-71 routine traffic stop
10-30 officer needs assistance 10-80 stolen vehicle
10-31 additional help needed 10-81 check stolen status
10-32 unusual problem 10-82 registration check
10-33 send all help available 10-83 registration& occupation
10-41 prisoner 10-84 check license status
10-49 wrecker 10-85 check NCIC computer files
10-50 at the jail with prisoner 10-90 improper radio procedure
10-91 changing radio freq.

i would recommend going to the local radio shack and getting the
frequency guide for that region and loading the frequencies for the
vicksburg casino's,philidelphia casino's,and it will also show the
game and fish frequencies that patrol the river and federal waterway
agencies that will be patroling. i might not be a bad idea to get some
barge frequencies since there are so many on the river. have fun i
will be in MS and New Orleans next month.

From: khaas <khaas@FFFFFFflashnet.com>
Message-ID: <680B2.383$Vg.489@news.flash.net>
Source record: 126486

I am thinking of tapping my discriminator on my BC235 in order to monitor MDT transmissions. Does anybody have any experience with the "MDT Monitor" software available at :

http://www.geocities.com/ResearchTriangle/Facility/7646/

How does it work? Does it work with just a sound card or did you need a HamComm-type data slicer, or an RM100 decoder?

Also, has anybody tapped their discriminator on either a BC235 or Pro-90? How accessible was the IC?

Thanks for the help,
Kevin

Yes, most of the vertical dipole antennas of late are a rip off of the original "Monitenna". Which IMHO after spending many hundreds of dollars in search of the "ultimate" scanner antenna turned out to be the hands down winner across the spectrum of 25-900mhz. Not bad for 50 bucks either

I just bought a Pro-2004 for $150 in a local pawn shop. I was surprised to discover that this radio seems to have 400 channels instead of 300 and full 800Mhz coverage (contrary to what it says on the box). I think I got a good deal. My question is: can this radio be modified for computer control, perhaps using one of the opto boards?

I had just the opposite experience. I placed an order 2 or 3 days before Christmas last year. It took 2 week to arrive, considering the hollidays and the distance and customs, I thought that was not too bad. I had great communication with them via a guy named Pete (I forget his last name) The 3 e-mails I sent him were responded to within 24 hours.
Good luck with your order Paul.

I used to live there. They do use aircraft, but it's rare. When they do,
you'll hear 'em on 42.34, talking to units on the ground. They usually work
S.R.14 between Tehachapi and Rosamond.

Fucking retards.
As if Congress really cared about anything except where they will get
their next blowjob, less wireless communications.
Electronic stalking my ass.
On that note, I think we should call all Cell phone calls between 800-900Mhz
"Frequency Theft" as scanner nuts used to be able to listen to this range until
congress's first stroke of stupidity robbed us of this frequency range.
I'm so sick of Cell phone people in the first place.
They drive slow and wreckless on the roads, they cause our national area codes
to be shuffled and changed, thay cause our scanners to have to be blocked.
I say congress and everyone else should allow 100% access to all analog/raw
communications.
If people don't want their communications to be understandable they should go
digital and encrypt their crap.

Source record: 126504

Hehehe, so much for AM and FM, HAM, Shortwave or commercial 2 way radio.
That's what the law says, they just deemed all listening of radio communications illegal.
Like I said, these guys in congress are morons.

2476. Re: More Tauzin lies

I still say that all frequencies should be wide open to raw communications and those who do not want to be heard can simply encrypt their data.
That way, none of us loses nor is anyone's toes stepped on.

Horrible, isn't it? I think the only recourse is for you to get out of
ham radio altogether. Yes, that's it... just give up on that disgusting
thing called ham radio and move on to an activity where you can
associate with right-thinking people. Maybe something that involves
wearing bedsheets.

Ham radio won't be any the worse for your absence.

Which one? The 7100 comes with a great telescoping whip that will
let you receive a little of just about everything out there. If
you have the 3300, 7200 or 9000, I'd suggest getting a new antenna
PRONTO! Read my Handheld Antenna Review for some suggestions.

> i am a bit perplexed as to what kind
> of reception to expect. i live in a small city (45000) on the edge of a
> large city (500000+). so there are plenty of signals bouncing around. i know

Again, a good antenna will do wonders. Are you properly tuning the
intended stations? Are you using the proper receive mode?

> should i give it some time, until i learn the techniques of scanning, or is
> there something wrong, perhaps do i need a different scanner.

Doubtful there is anything wrong with the radio. You simply need to
learn
where in the frequency spectrum are located the services to which you
want
to listen. Then tune those ranges using the proper receive mode and step
size. Learn how to use the search feature of the radio to hunt for new
frequencies night and day.

Wouldn't hurt to pick up a good book or two on the hobby as well as
some local frequency info. For starters, if you live in the US, I
strongly suggest you stop into Radio Shack and pick up a copy of
Police Call Plus.

Best of luck and happy monitoring!

Into this mix I'll throw the IC-R2 ($220).

For computer control, the IC-PCR100 could be considered for $320 if you
want/can be tied to the PC.

Although more expensive, you can get computer control, and trunk
tracking
to boot, with the new OptoCom.

For a comprehensive list and suggested pricing, stop by my New Scanner
Users FAQ which has a section devoted to this topic:

Finally someone figured it out. The Board also voted NOT to publish
even one word of the information on the FBI admitting to jamming the
Amateur Radio Service, available at the website below.

The goal at ARRL is membership dues at all cost, if they have
to become criminal co-conspirators, and become guilty of
misprision of felony (18 USC 4), or invite Sodomites into
the League they will. The root of all evil is the love of
money.

You should also check out the following sites:

The following Police Departments are now avaiable on the APB Online
site at http://www.apbonline.com/

Boston PD
Chicago PD
Dallas PD
Los Angeles PD
New York City PD
Philadelphia PD
San Diego PD
San Francisco PD
Seattle PD
Washingon DC PD

The following Police Departments are now available on the
Policescanner.com site at http://www.policescanner.com/police.stm

Dallas PD
Dallas Sheriff
Los Angeles PD
Miami PD
New York City PD
Plano Texas PD

The following Police Departments are now available on the
StormBringer's site at http://206.156.18.79/~strmbrgr/real.html

Arlington County VA PD
Alexandria City VA PD
Fairfax County VA PD
Washington DC OD
US Park PD (Washingon DC area)

The following Fire and Rescue Departments are now availble on the Police
World Scanner site at http://www.policeworld.net/user/bobcann/live.html

Indianapolis FD
Monroe County New York FD
Montgomery County Maryland FD
Providence FD
Rochester FD

The following ATC site are now available the Canadian Air Traffic Controllers Web at http://members.home.com/catcw/livefeed.html

Abilene Tower - Ablilen, TX
Centennial Tower - Englewood, CO
Chicago Approach
Dallas Fort Worth Intl. Tower
John Wayne Tower - Orange County, CA
Miami Intl. Tower
Omaha Center
Providence Approach
San Diego Intl. Tower
Toronto Center

> Thanks, John

AF1, usually operating under some SAM number (Special Air Mission) is
not encrypted as far as communication with Air Traffic Control. Monitor
the closest local major commercial airport ATC as well as the Air
Force Base ATC. These freqs will be on the aeronautical charts, for sale
at General Aviation airports. Also the telephone links, both up and
down,
are usually not encrypted unless the First Rapist is on the line. AF1
working with ground component of this link to set up dialing on land
lines is usually not encrypted. Secret Service is not encrypted until
First Rapist is on the ground, and goes back to plain text as soon as
AF1 is again in the air. You will hear a hashy noise on the SS frequency
while they are passing digitally encoded traffic. Log it just the same
for the purpose of COMINT (Communications Intelligence), someone may pay
you money for the log and real time tapes, use the audio track on a
VCR and start the tape at a precise top-of-the-hour time . You might
also monitor State Highway Patrol to listen in on the escort while
First Rapist is on the ground, and news media helicopters in 450-1
and 455-6 FM band to track progress of motorcade. Air Force Base
security frequency may show some unencrypted traffic pertaining to
First Rapist and AFI. The C-141 Starlifter which hauls the armored
limos is also another target in these events. State Bureau of
Investigation, BATF, FBI,(use you imagination for other agencies)
may also be on alert. A good general reference on Fed frequencies
and scannering will give you long-range 3-30 MHz aeronautical
frequencies for tracking AF1 inbound prior to handoff to local
AM-VHF ATC frequency as well as telephone up and down link
frequencies. You will need a good directional antenna to get
last bit of UHF telephone traffic when AF1 goes wheels up and
out of range.

The congress is schedule to discuss cellular privacy or the HR 514
bill on Thursday, Feb. 25, 1999.
They start at about 10 A.M.
You can watch on CSPAN-1.

Some new radio scanners have advanced features to make them more like
test equipment, instead of receiving equipment.
More reasons for removing their radio spectrum restrictions on radio
receivers is at http://www.qsl.net/n4tyv .

The concern is the concentrated power not total emitted power.
Also where the beam is directed to as in over the horizon radar. Do
you want a few mega watts of rf at human brain frequencies coming to a town
near you.
Not that I'm a conspiracy fan but undeniable reports of
governments doing a little experimenting that got out of hand are common.

Regardless of my feelings about Lambda, which is less than enthusiastic
some facts remain:

1) The ARRL is required by law to accept their advertising.
2) The ritual code hazing is required by law as well....for now.
3) These kind of posting do nothing but weaken Amateur Radio by dividing
the operators.
3a) Seem to always be posted by individuals with aliases.

Hi Mark,
a logical periodic antenna should be one of the best for you (but maybe very
expensive if you buy it).
This type of antenna is a wide-range directed antenna.
They are often used by embassy`s personnel.
There are several models for HF, VHF, UHF

The whole reason they came up with the AF1 callsign was for use with
civil/military ATC!

In other words, Air Force One uses 'AIR FORCE ONE' as their callsign on ATC
circuits, not SAM & the aircraft tailcode.

> Also the telephone links, both up and down,
> are usually not encrypted unless the First Rapist is on the line. AF1

You seen to be referring to the WHCA/AT&T 'Nationwide' system, also known as
'Echo/Fox.' It was deactivated several years ago...

> George Zimmerlee Research on Criminal Government

Your "research" certainly seems rather criminal alright!

They are very lax in communications and shipping info. I had a similar
experience. Once they confirmed the ship date, it took approx. 2 weeks to
get.
I am sure delays can be expereienced in customs, etc. Be patient!! It is
worth the wait. Unless of course, it may have been confiscated!!! Oh
no!! Just lost all my */#%$ing money. Hope not...Good luck. Give it
another week before you start to really worry.

>Thanks for all the help. Another question about the computer control
>part. This 456 board can be used in the Pro 2005 and 2006 board correct?
>How is this board connected? Is this board still sold?

That is correct..only the 05 and 06.
The board is designed to be a perfect fit in the bottom of the radio.
Installing one is easy, and takes roughly an hour.
The "hard" part is removing the power transformer temporarily to fit the board into place (it uses the transformer mounting holes for its' side brackets, and the transformer re-installs above the brackets). Then you remove 3 cables from the radio's PC board, plug them onto the Opto board, then run 3 new ones from the Opto board to where the old ones were removed).
The instruction booklet is well-done and has good photos to assist....it's really hard to install one improperly. You must also remove the battery compartment and re-locate the battery to inside the scanner using double-stick tape. The serial port connector is placed where the battery door is located.
As far as connecting, it's a matter of running the 9 pin serial cable that's included to your computer's serial port.
You get a couple of disks containing a diagnostic program for testing everything out and a shareware demo scanning program.
The board is still available, but only in the LITE version, which means that you do not have tone decoding features and a S-meter as the full version did.
They are on sale for $99.00 direct from Optoelectronics (You may have to tell them you saw the ad in Popular Communications to get the price, I dunno...they normally sell for $129.00). They were on backorder a month ago and a friend of mine had to wait a couple of weeks to get his, but if they're in stock, they'll ship you one quick.
The # is 1-800-327-5912
Web site: www.optoelectronics.com
If you decide to go with that setup, I'd recomend Probe 4.0 as your scanning software. It's DOS based, but is very powerful and the best I've used. You can read reviews of various software at Steve Hancock's 2006 page (a great site!)
http://home.ptd.net/~pro2006

I've had my Opto setup for over a year and it works fantastic. I'm sure others who own one will agree it makes for a great computer-controlled scanner.

Holler if you have any more questions!

Dan

2523. Alief ISD Frequencies

Hi,
I have been looking for years for the CHP aircraft frequency for northern los angeles county area. I know they use planes in this area. Not exactly sure where but i know they are around. Does anybody know the frequencies to the aircraft if they're are any.
I use
42.340
cant pick up anything on the 45.020 frequency like all my books say. Maybe i'm just in a bad area.
Thanks
Steve

>University or University Circle Police here in Cleveland? Descriptions
>would also be a plus but I'll take what I can get.

Can't help too much with descriptions of frequencies, but here is what
I know . . .

856.2125 - CWRU - Security/Police - Repeater
462.1000 - CWRU - Repeater
422.6250 - CWRU - Repeater
467.8125 - CWRU - 2 Watt Simplex

855.3625 - University Circle Incorporated - Police - Repeater
856.1625 - University Circle Inc - Police - Repeater
864.0625 - University Circle Housing Inc - Repeater

Hope this helps!

Jeff

The ARRL was forced by court order to accept advertisment by the Lamda
group. This does not mean they liked it.

I agree the ARRL needs to get their head out of their collective rears and
wake up and smell the roses. But this is nothing new. Instead of sitting
around and bitching, might I suggest we ALL join it, then throw the bum's
out that you don't like.

They (ARRL) long ago lost sight of the original idea's of HPM. And BTW
what does " T R K " mean?

The Pro2026 sold new, in 1993 for $219 (in 1993 dollars). Considering the full 800 mhz coverage, $150 delivered is a very fair price indeed, especially in today's market. I also included a right angle bnc connector ($4.00) a telescoping whip antenna ($10.00) and an a/c adapter ($7.00) -all of which did not originally come with the scanner. I included the items so that it could be used immediately without purchasing any additional accessories. The scanner had additionally been converted for full 800mhz coverage - a service that Cellular Security Group charged $40 for when they were still in business (never mind that I thought their services were overpriced). I had over 20 inquiries to my "for sale" post and sold the scanner earlier today. - Get with the real world - I have seen cellular capable scanners on ebay which sold for considerably more than the original list price.

2533. H.R. 514 a smokescreen?

Newsgroup: rec.radio.scanner
Date: 1999-02-24 00:00:00 UTC
From: jtward01@aol.com.nospam
Message-ID: <19990223192546.01137.00002001@ng-ba1.aol.com>
Source record: 126621

Folks,

I just took a look at the H.R. 514 bill summary, and I think I see why the House has been so determined in getting this (or H.R. 2369 last year) passed. I really think all the talk in the bill about cellphones and digital modes and most everything else is really a smokescreen to hide this bill's true purpose. The last paragraph of the summary reads:
"Applies penalties for the unauthorized publication or use of electronic communications to the unauthorized receipt, intentional interception, or divulgence of any such communication. Directs the FCC to investigate alleged violations and proceed to initiate action to impose forfeiture penalties."
Remember the infamous Newt Gingrich cell call? While it's clear the couple in Florida who monitored and recorded the call broke the law (they were fined $5,000, by the way) the New York Times and other newspapers who printed the transcript of the conversation couldn't be touched because the existing law says "intercept AND disclose." The papers didn't intercept it, they only disclosed it. By changing AND to OR, the new bill will make the publication illegal, even if the newspaper obtains the information legally.

From "Unofficial Space Shuttle Launch Guide",
by Steven S. Pietrobon

Shuttle Frequencies
==========
The Space Shuttle transmits on three frequency bands: UHF, S-Band, and
Ku-Band.
The UHF frequencies are simple AM voice and are very easy to copy. These
frequencies are used for launch and landing operations, EVA operations, and as
an additional voice downlink when other channels are in use for the current
ground station has no S-Band capability.

The frequencies in use are:
296.800 MHz : Air-to-ground, or Orbiter to suit
259.700 MHz : Air-to-ground, or suit to Orbiter
279.000 MHz : Suit-to-Orbiter, or suit-to-suit
243.000 MHz : Standard military aircraft emergency frequency

The S-Band system is one of the primary Orbiter downlink bands. The voice
channels are digital slope delta modulated and are multiplexed in with the
rest
of the Orbiter telemetry and is very difficult to copy. Much of the downlink
TV is on S-Band also, but is wideband FM and should be easy to copy. The
frequencies are:

2287.500 MHz - Primary digital downlink
2250.000 MHz - Wideband FM with either main engine analog telemetry during
launch, or TV during orbit operations.

The Ku-Band system is used in conjunction with the tracking and data relay
satellites and is used much more heavily in Spacelab flights than in others.
The data rate is very high (50 Mbit/s). These transmissions are directed
to TDRS satellites in geostationary orbit on a frequency of 15.003 GHz.

(Information via WA3NAN, and WA4SIR)

That only works if their extender is turned on. When the officer is in the vehicle, its usually turned off as it produces and annoying beep in the vehicle when its turned on.

This is correct...to be more exact, the high IF is 45.1 Mhz in the
800-900 Mhz range.
So the images are 90.2 Mhz above the actual desired frequency.

Bandercom replies:

Actually the strike is at the flight control but will not affect any AIR MAIL shipments for more than 18-24 hours or not at all. There are other reasons for severe shipment delays. Please, read below for more information on the strike.. FCAA web site can be found at http://www.fcaa.fi and http://www.ilmailulaitos.com/english/ilmailul/

24.02.1999

Air traffic pauses on Tuesdays and Wednesdays in
Helsinki-Vantaa Airport

The Civil Aviation Administration of Finland is preparing for long time arrangements due to the ongoing air traffic controllers strike. These new arrangements will make it possible to maintain ATC services at a certain level for months, if needed.

In practice this means that air traffic control at Helsinki-Vantaa Airport is closed on Tuesdays and Wednesdays. During these days charter flights and intercontinental scheduled flights will be operated from Tampere-Pirkkala Airport. All other scheduled international and domestic flights to/from Helsinki-Vantaa Airport will be cancelled on Tuesdays and Wednesdays.

New arrangements beginning from next Monday (1 March) will allow to operate 70% of international flights and 20 % domestic flights. Weekend operations from Helsinki-Vantaa Airport will be increased.

Flights from Helsinki-Vantaa Airport adhere to the normal strike-time schedules. Domestic flights from Helsinki-Vantaa Airport will be operated to Oulu, Rovaniemi, Ivalo, Kittilï¿½, Kuopio and Kuusamo

Bandercom replies public:

1. Shipped almost one month after order.

We do notify customers at the time order if the ordered merchadise is not in stock and when we are expecting delivery from our supplier, and that the shipping would be delayed. Backorded items can delay your shipment. But we make sure that customer knows that there is an extended delivery lead time in such case.

2. Order shipped but not received in time. Interpreted: "was not sent".

If an express shipping is requested, we should know about it at the time of order. Not before or after because there is no way of knowing for sure in case of earlier request and we are also unable to change the method once the delivery has gotten out from our warehouse by other means than what supposedly meant.

3. General shipping information

We ship Postal Air Mail/Priority shipping costs are included in our prices. At additional cost we can ship by more expedited methods like UPS EXPRESS (1-2 day world service - highly recommended). We will also ship DHL
or FedEx. They can offer 2-4 day deliveries all over the world.

*USA shipments: MA, NY, CT, RI, NJ (Generally New England) are only 4-8 days. MN, IN, MI, CA are second best: 6-9 days. FL, GA, AL, NC, SC, TX, NV, AZ, TN, KY, VA and WV.: 8-10 days. Generally WA (parts of CA), OR, AK, HI are for some reason over 10 days. Sometimes South Western States are the worst.

Due to increased security worldwide, slight delays and problems with Postal delivery will occur to some countries (preferably US). Other delays are caused by general seasonal delay, Finnish Postal Service (may delay 1-2 days), Exportation procedure, paperwork and hold of merchadise for export (may cause 1-2 day delay), To our experience - however - the longest delay is caused by US postal services. The postal service is unable to locate the exact reason or track or trace regular mail at US

end but we are told that shipments reach JFK airport postal terminal in 1-2 days after our despatch.

If you choose Postal delivery it with your understanding that there may be delays in delivery and delays in recovery if item is lost or damaged.

For more information, please feel free to contact our sales desk at bandercom@bander.com

Best Regards,

Pete Peltola
Export Sales

Sorry Dave, but the Opto456 won`t fit in the scanner, either physically or plug - wise (the plugs wont fit and they arent wired correctly) About the only option he has is the CE-232....

I am considering buying a Diamond D505 scanner antenna. It has a 0 to 20 db. adjustment. I live in a large metro area and have a lot of inter-mod. Does anyone out there use this antenna in a large metro area and what are your results.....thanks in advance. Also where did you purchase the antenna and how much did you pay.?

Greetings,
I am looking for a mobile 2 channel VHF crystal controlled radio or cheaper VHF 2 channel mobile. Not looking to spend more then $80 for the unit. Need it for two ham radio frequencies. 1 being a packet freq and the other being a SIMPLEX local channel. Right now I am using a HT but I have so much intermod around the area that I causes problems. Also, my HT only puts out 2watts and need more power to keep a connect on packet. Anyone have what I am looking for?

Please email me back if you have something I am looking for.

Freqs I need are 145.7500 MHz & 144.4600 MHz

Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.equipment

Greetings, all...

Our organization is planning on purchasing an all-mode VHF/UHF
receiver/scanner. If the constraining factors were that

- It has to be US legal
- Price must be under $3000

What would you get? ICOM R-8500? AOR AR-5000+3? Something else?

The receiver will be used in the following ways:

- Telemetry receiver for satellite/deep space probes
- As above, but with input from a microwave downconverter
- "semi-amateur" radio astronomy

The receiver will be in a weathertight building but the building
has no heating or cooling.

I'd appreciate your thoughts on this, and *why* you feel the way
you do -- in other words, "AOR radios rock!" isn't a good reason. :-)

Thanks in advance,

Eric

I have the pro-90, and it seems to work ok for me. I've enjoyed it.
It's pretty sensitive with signals I think and it's
pretty easy to use, but it takes some
getting used to in the trunking mode os
rad that manual carefully. The audio on
the pro 90 is wake and no loud enough for
me, your taste my be different, and the clip on speaker i bought did not
help.

It's frequency range is good, i can lesten to 220MHZ fo the Blue Angels
and Ham
Radio stuff, and air traffic on AM is great
to have too. You can always get a better
HT anteena instead of using the one it came with, that helps alot. Well
I hope
I was able to shed a little light on the
pro 90 for you, good luck!!!

Here is one persons opinion. Pete Peltola is one of the good people in this business. He has always been friendly, honest, and upright with myself and others I know who have dealt with him. My impression is that he is very hard working and makes an attempt to keep you updated on your purchase. I have bought from him and will do so again. This entire company is geared up to serve the customer. Okay, I'll get off the soap box! 73, Steve, AC6FR

Wow... absolute proof...what proof is Absolut?
It would be nice if this was true...but if you really wnt, I can prove
that you are a fish. or that your father was a fish, using logic. This
does not make you or your father a fish however, it only points out flaws
in logic.

In Congress today, the House voted 403-3 for a measure to strengthen wireless communication privacy laws. The bill, which now goes to the Senate, makes it illegal to intentionally intercept or disclose any wireless communication and extends restrictions on scanners that can be easily altered to receive cellular frequencies.

Currently, said Rep. Billy Tauzin, R-La., ``Off-the-shelf scanners can be easily modified to turn them into electronic stalking devices.''

Actually you'll hear a lot more than just that on most fast food freq's, especially if a customer is rude or dumb. The employees have the ability to talk amongst each other without the customer hearing it on the speaker, and they use this feature to crack jokes about "idiot" customers. Plus, I like knowing what the cars in front of me have ordered, so I know how long I'll have to wait. It can be really great entertainment while you wait for your food!

Now, if you wanted to, I'm sure a free meal could be earned by acting dumb on purpose, waiting for them to say something off-color about you, and then pulling up with scanner in hand, saying "I heard you. Go get your manager." ;-)

Try 35.02 at your favorite McDonalds next time you're there. You'll see what I mean. Most others (Wendy's, Burger King, etc.) will use the itinerant "dot" and "star" channels, which are listed in most frequency guides.

-Phil

2573. FS: Realistic PRO-2036s

Newsgroup: rec.radio.scanner
Date: 1999-02-25 00:00:00 UTC
From: tvsjr <tvsjr@sprynet.com>
Message-ID: <7b47e1$mn5$1@juliana.sprynet.com>
Source record: 126411
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.swap

I have three Radio Shack/Realistic PRO-2036 scanners for sale. These radios are RS duplicates of the BC890XLT.

Here's the product info from U/BC's web site.
BC890XLT - 200 Channel Continuous Band Scanner
Continuous Band Coverage :covers virtually every frequency from 29 MHz to 956 MHz

200 Channels
Weather Scan & Alert
Frequency Transfer
Automatic Sorting
Automatic Store
Optional CTCSS Tone Board
Programmable Scan Delay
Auxilliary Tape Outputs
VFO Control Knob
includes Aircraft Band
Channel Lockout
10 Priority Channels
Includes 800 MHz & Aircraft

The radios are in pristine (10/10) condition- they look brand new. They have been sitting on a shelf locked up on one channel for a while, and have not been touched, so the knobs and buttons are nice and tight, not sloppy. This radio is capable of CTCSS tone decode, however the radios don't have the optional board. I believe that you can still purchase the add-on boards.

I would like $200/each for the radios, or, make an offer and we'll see how it goes. I normally don't read the newsgroups that often, so please e-mail me at TVSJR@SPRYNET.COM about the radios.
Thanks
Terry

Source record: 126422
Cross-posted to: rec.radio.scanner,alt.ham-radio,alt.radio,alt.radio.amateur,alt.radio.digital,alt.radio.scanner,alt.radio.scanner.uk,aus.radio.scanner,es.rec.radio.amateur

Sorry for all the crossposting, but this info is necessary.

Those of you who are familiar with Agrelo Engineering, of Pattersonville, New York - the manufacturer of the DF Jr. radio direction finding unit - will understand where I am coming from here...

I am looking into the dealings of Agrelo Engineering President, Joe Agrelo; N2OOC. This individual has portrayed himself as a "business" man. He has offered a service and a product, but has yet to follow through on his promises. His products were to be handed over to SWS Security - to be the sole distributor of the DFJr. direction finding product line - but this has yet to happen.

Joe refuses to answer e-mail, the phone, the door, or to deliver the product that has been paid for by individuals and large organizations.

An investigation is underway by the FBI and the US Postal Service.

ANYONE THAT HAS HAD DEALINGS WITH JOE - *PLEASE* SEND ME AN E-MAIL!!!

I would like your name, address, phone number, and e-mail address.

PLEASE send me a "small" story on your particular situation...

This information will be used in case a class action lawsuit is initiated. The FBI has indicated that they need to know the entire scope of this incident. The more people, the better the chances that we can all get our product, or our money back.

Please reply to hutch@jerrylee.com and feel free to contact me with any questions at home, 616-735-0798.

Thank you for your time...

Eric - N8XHP

2585. FS: Radio Shack Pro-2006 Scanners

I have 2 Realistic Pro-2006 scanners covers 25-520 mhz and 760-1300 mhz. Some of the features of this extremely popular unit are 400 channel memory, am/fm/wfm mode selectable, direct frequency search, 10 programmable limit search banks, 2 speed scan and search, lockout, delay, lockout review, step search select, priority and sound squelch. It has jacks for an external speaker, headphones, and tape out. Clean unit's in EXCELLENT condition. Both radio's are very clean and in perfect working condition with no backlight problems. You will receive the scanner, telescopic antenna, original manual and box. The cellular modification has not been done. The serial numbers and FCC ID's of the radio's are (SN 009929 & FCC ID AA020-145) & (SN 024555 & FCC ID AA020-145). Asking $325 + shipping for each radio. If you have any questions I will be happy to answer them.

Source record: 126426

Optoelectronics Xplorer

For Commercial and Mobile Radio testing, the Optoelectronics Xplorer stands alone. Let the Xplorer perform all your quick radio checks, instantly determing the radio's frequency, CTCSS, DCS, DTMF, Deviation, or Signal Strength. The Xplorer automatically locks on to any nearfield signal from 30MHz-2GHz in less than a second.

There is no setup necessary - Whether you're in the field or in the shop, the Xplorer is the portable, compact and economical solution for any two-way communications exploring.

This patented, hand-held device has 3 functions in one unit: a test receiver, a frequency recorder and a decoder. The Xplorer reads PL and DPL. It has a 110V or 220V autoswitch p/s. Sweeps 30 Mhz to 2 Ghz in UNDER 1 SECOND! (Minus Cellular), thou from what I understand it can be restored and I have the directions to do so and that will be included.

Plus, you can automaticallly lock onto any active FM analog near-field frequency and demodulate audio. And there's more to this amazing, compact machine:
* Decodes DCS, DTMF, CTCSS and has a built-in PC interface

* Shows relative signal strength, FM deviation, and latitude/longitude with optional interface and GPS

* Frequency recording of 500 frequencies including time, date, DCS, DTMF, and FM deviation

* An RF-232 interface and cable are included

* Along with an internal NiCad battery with power supply/charger

Weights just 10 ounces and goes Anywhere! To see a picture of the Xplorer go to the following:
http://members.aol.com/cozyoak/xplorer.jpg

This is in MINT condition, still even smells new. Used 2 to 3 hours at the most. This is the older model NOT the new one being sold now.

Comes with the following ....
1. Optoelectronics Xplorer
2. AC Charger / Power Supply
3. TA100S Antenna
4. PC Interface / Downloading Cable
5. Original Box with Owners Manual
6. Software - Xplorer / Scout Download Utility
OS456 / OS535 Checkout Utility

Radio Manager for Windows
ScannerWare DEMO

Asking $600. If you have any questions email or call me at the following:

What is a good place to go to for police frequencies in Massachusetts. Not the regular ones that are in the ScannerMaster book! But the secondary channels that are unpublished.

2592. IC-Q7 v VX-1R and IC-T8A v VX-5R

Newsgroup: rec.radio.scanner
Date: 1999-02-25 00:00:00 UTC
From: colton@patlanta.com
Message-ID: <7b4h3q$2gi5@news3.newsguy.com>
Source record: 126430

I'm thinking of buying just one of these 4 rigs. I'm interested in what those of you owning these might advise.

Why did you choose your IC-Q7 over the VX-1R, or vice versa?

Why did you choose your IC-T8A over the VX-5R, or vice versa?

I have the 3 normal main concerns:

1. Hitting the repeater;

2. Reception; and

3. Audio (I don't want to strain too much to hear it).

Thanks in advance for the input!

Larry Colton

>with a statement like ... current off the shelf scanners can recieve cell
>phones....
>
>hasn't he heard of the ECPA?

But if you think about it (and not that I agree with the proposed legislation, far from it) he's right!

I have 1 pre-ban and 3 post-ban scanners at home, an old uniden 16 channel base unit, I forget the exact model number, a PRO 2026, a BC230xlt and a BC895xlt.

The uniden 16 channel does not receive cellular, even though it's pre-ban. It only goes up to 512 Mhz.

The 2026 was post-ban, but easily modifiable, so it, if properly modified, could receive cellular, and does receive images on 896 to 910 Mhz or so.

The BC230xlt was bought new about 2 years ago. It cannot be modified to receive the whole cellular band, but receives cell images just like the 2026 does.

The 895xlt was bought brand new also, about a month after they came out. It canot be modified for cellular, and because of it's triple conversion, doesn't get the images on 896Mhz either. So far so good. BUT: I have heard cell images on the aircraft bands and VHF on occasion.

So to his point, just about any scanner sold new, especially dual conversion scanners, can receive a cellular phone call.

Now, here's the real problem. The cellular industry is the one lobbying for this bill, and their doing so saying that the privacy of it's customers is being violated. Wrong. They could care less about that. They want this law to pass because people are cloning phones and racking up monstrous airtime charges that they can't collect. The cellular industry can't/won't pay to enhance their systems to prevent this, i.e. an all digital network, so they instead pad the pockets of Congress to pass ridiculous and restrictive laws.

What's worse, thanks to complete retards like the ones who recorded the infamous Gingrich call, scanners are being singled out for this new legislation, while cellular equipment remains easily modifiable and flawed. The people who are stealing service aren't using a scanner to do it. They are using cell phones connected to a computer to do it.

A properly modified cell phone can be used to not only scan (and follow) conversations on the system, but it can feed the ESN, your cellular PIN number to the computer for display on screen, storage to a file, etc. Then, using any UNMODIFIED cellular phone, the ESN can be entered into the phone right from the keypad, using instructions found in the owner's manual! (I have the Audiovox 502 myself, and the inside back cover has a cheat sheet on it that shows the keypad sequence for changing your ESN.)

So what will happen if HR 514 passes the senate? Scanner manufacturers will once again be forced to remove functionality from their scanners, while the cell thieves continue plying their trade unhindered. What's worse, when the cellular industry gives way to PCS and satellite phones, the frequencies will be up for grabs by anyone, including public safety. Follow me on this. With no scanners available to monitor this range and the ECPA of 1999 firmly in place, you can bet these freq's will be highly sought after by police departments nationwide to prevent their comm's from being monitored while still allowing them the cost savings and benefits of using standard analog radio systems. Not a big deal? Think again: With the new law in place, just listening to a scanner on these frequencies will be a crime.

Not good. Not good at all, boys and girls......

-Phil

I'm Also looking for information on this new scanner. I saw it advertised on the back of Monitoring Times March/99. They have a small article about it on page 98. A review is expected in the up coming issue.
One of the questions I have is, Does it skip over the anti scanner tones that are sometimes used at the end tranmissoins on EDACS trunking systems?

You can check out Grove's web site at www.grove-ent.com or www.optoelectronics.com for more information.
I'm seriously considering buying one of these, but like yourself would like to talk to someone who already owns one. Expect the price to go up on these soon. The price that is listed now is $90 off the regular price. Enough to cover the cost of the optional EDACS software.

Ever try the search key on your scanner? This will find them all, with a
little time (ok maybe a lot of time) and effort.

Another place to look is the online FCC database. Do a search that returns
ALL frequencies licensed to the city in question, i.e. BOSTON, CITY OF.
It'll return bunches, to be sure and there's no telling what they're used
for without actually listening to them, but eventually, you'll spot the ones
you want.

I miss having EXACT time. Is there a web site that broadcasts this or am I just hoping?

Is there a way to get WWV on an old Bearcat 210?

2600. pro 90 and 220NHZ

Newsgroup: rec.radio.scanner

I had written a message stating that the
pro 90 could get 220MHZ, SORRY!!!!
but of course that was incorrect. I have
a BC895XLT that gets 220 and I was thinking of that radio at the time of
answering the question posed in the
newsgroup. I hope you accept my
apology for the mix up. Thank You.

I sell 9 foot loaded rubber ducks that work great on the lower bands. BNC or SMA
connectors.
When chicks see these...they swoon.

Mellow out dude. Its not a critical issue here. Alot of people read
Pop Comm (me included) and find the info useful and interesting. Its
not rocket science we are doing here. Its supposed to be fun. Calm down
and enjoy.

2605. HR514 Debate Comment

Newsgroup: rec.radio.scanner
Date: 1999-02-25 00:00:00 UTC
From: American <do@something.now>
Message-ID: <36D622B7.B20E2F1A@something.now>
Source record: 126443

Rep. Tauzin (R-LA) recalled the past.
He explained how his telecom committee simulated cellphone
interception and he solder a wire to easily modify a scanner.
Simulated by a committee member pretending to over throw the commerce
committee while Rep. Tauzin listened in.

:) Oh gee that sounds so bad and god awful that we should arrest
everybody with a radio.

Rep. Wilson (R-NM) explained that the press hampered the FBI.
She referenced the TWA 800 investigation and how the press were using
scanners to monitor FBI cellphones.

:) How can that hamper the FBI when they have plenty of encryption
devices?
:) That's right the press or American people should not know the real
truth.
:) The FBI can make up their on story or make it look impossible they
could have flawed the investigation.

:(And no one debated against HR 514.

This bill is special interest legislation by big contributors (aka corporate giants).
I doubt that the congressbums have heard one peep from their grass roots supporters favoring such nonsense.

Write a letter to your congressbum and tell them they suck.

Source record: 126448

I'm a student in college who likes to listen in on his surroundings. I currently own a Bearcat 55XLT, & I would like to find something better, with a larger frequency range, preferably up to 900Mhz. Can someone suggest a good quality scanner at a decent price. I really don't want to spend too much, seeing as most of the money that I make needs to go to school. I'd appreciate any help.

Caylorman

2611. Re: Air Force One encrypted?

Source record: 126449

Thanks to everyone for the information. The Secret Service freq's I monitored were pretty hashy; either they were encrypted the whole time or I was getting intermod-from-Hell. I heard a Life Flight Heli trying to find the modified approach to University Medical Center (!), the TPD SWAT team shaking down a guy on a rooftop hiding behind a satellite dish (the Secret Service took over this one), and a couple of motorcycle cops wipe out on the way from the base to the Convention Center(the motorcade kept on going). Unfortunately, I only got partial exchanges with the tower re: AF1. But it was an exciting day in scanning here in Tucson.

John

I'm getting sick of this country.
If I ever get rich enough to leave this country and sustain myself comfortably,
I'm moving to some island away from others laws and governments as I can't stand having what makes life important to me, slowly be taken away and deemed illegal.
Seems like the only thing the gov and society doesn't have a problem with is me giving them money and me working my ass off for little.

PLEASE remove "no-junk" from my e-mail address to reply or call (206) 405-2083.

I want to trade for a WinRadio, An Optoelectronics Scout and a Base dual band (2m/440) good quality ham radio no older than 3 yrs (like Kenwood TS790, Yaesu 736, Icom IC 820 or 821).

Would you be interested in a trade?
Pictures of items that say "on the net" can be found at http://pobox.com/~sci/Forsale/For_sale_pictures.htm
. Call if you see something of interest 206-405-4306 -Ron

TRUCK
-Pickup, 87 Jeep Comanche Pickup with Canopy, 4 cylinder, 2-wheel drive. New engine with 5 year 50k warranty (4 years left), new clutch, new muffler, Sony CD player (35 watts per channel @ detachable face) with 4 speakers, lifetime gas shocks, lifetime wheel alignment. Tuned, aligned, tires rotated and balanced 12/98. Changed rear differential and transmission fluid 1/99. Black truck with white canopy. Runs great. (Picture on internet) $2795.

ELECTRONICS
-Police Scanner, Desktop & Mobile, AOR Communications Receiver (AR2002) Continuous coverage 25MHz - 550MHz and 800 - 1300 MHz with 20 channel memories. That means NO blocked frequencies in those two zones. Receive modes are NFM, WFM, and AM. Accurate receiving frequency by PLL synthesizer circuit. Multi-functional LCD display for frequency, scan, mode, search, time. Easy and efficient keyboard operation for frequency selection and various modes. Has computer interface port, headphone and external speaker jacks. (Picture on internet) $225

XXX

-Police Scanner, Mobile, Bear Tracker BCT-10, highway patrol detection with strength meter, highway patrol coverage, local police coverage, pre-programmed scanner covers all 50 states plus Canada (just tell the unit what state you are in), 9 level strength meter, instant weather, built in speaker, windshield mountable, buttons include: alarm off, mute, mode, state, hold, lock-out. Squelch and volume control, external speaker. Includes antennae and windshield mount. $125

-Police Scanner, Desktop. Radio Shack Pro-2032 with 200 channels in 10 banks, hyper scan, etc. Great and reliable unit. $115

-27" Stereo TV, RCA (model F27631SF), s-video, remote control, ability to name channels onscreen, sleep timer, alarm clock, closed caption, previous channel (allows us guys to jump back and forth between two channels), "30

second skip" (allows you to wander the channels for 30 seconds per time this button is pressed and when that time is up, it jumps back to the channel you started at, perfect for avoiding commercials - another great guy feature). A perfect picture. Owners Manual. $200.

-Laserdisc and 5 music CD Player, Pioneer (CLD M301) allows you to shuffle 5 music compact disks or watch a laser disk. Many features. Works perfectly. Surround sound. Includes remote. $175

XXX

-Power Supply. (Astron RS-20A). Perfect for HAM applications. New in box. $100

-Fax/Answering Machine/Copier in one. Panasonic KX-F90 stand alone fax, answering system with copier. Resolution = standard, fine, super fine. 10 number programmable speed dial. Digital outgoing message, incoming on micro cassette. Fax poling capable. Works perfectly. $55

-Alpha-Numeric Pager with alarm, news, stocks, sports, weather, trivia updates. Motorola Advisor Pager. Included free (even before you subscribe to the paging service), you will receive stock updates, head line news, weather, sports and trivia on your pager! This pager sells new for $149.95. Also comes with alphanumeric software to distribute to your friends. You can also receive e-mail with this pager! I am selling the pager with four pager pouches and instructions for $55 (picture on internet)

-Bookman, Franklin calculator with advanced thesaurus, and changeable cartridge port. Also a calculator. Comes with Miriam Webster Dictionary cartridge, games included. Can purchase Bible cartridge, bartending, language translators... all still on market. Unit sells new without cartridge for over $80. Asking $29.

-Walkman, Panasonic water resistant Shock-Wave Cassette/AM/FM "walkman" player. Digital radio tuning, five memory buttons, auto reverse, and headphones vibrate with bass tones so you can actually feel the music! Hand strap for jogging and belt clip. $30

-Car Cassette/AM/FM stereo (JVC KS-R135), digital tuning, separate bass/treble, front rear fader. Perfect condition, $35.

-Dual Band Ham Mobile. Icom IC-2350H. TX 144-148 at 50/10/5 watt. (Rx 118-174) & TX/Rx 440-450 at 35/10/5 watt. Built in cooling fan. Cosmetically and functionally, perfect. Owner's manual and mic included. 50 memory channels and scan edge memory channels. Scratchpad function. Priority watch function. Programmable function button on mic. Pager function. Time-out timer, auto power off, mono band operation. (Picture on internet) $300.

-Telephone, 2 line, large LCD screen, caller ID, speakerphone, Northern Telecom (350), redial, upgradeable, printer output, directory, line in use indicator, voicemail compatible. Sells for $400 at GTE Phone Mart. The best phone they sell. $125.

MISC
-Leatherman, LM-18 Wave. 4" closed. Brand new. All stainless construction. Includes built-in wire cutters, needlenose pliers, phillips screwdriver, standard screwdriver, wire stripper, can/bottle opener, extra small, small, & medium screwdriver, scissors and lanyard attachment. Also has four locking blades (clip, serrated sheepsfoot, diamond coated file and wood saw) that can be accessed without opening the tool. Nylon sheath. Retails for $115.95 + tax. I want $75.

-Knife, Spyderco Mariner folding knife with metal belt clip. All stainless AUS-6 blade with thumb hole pull. Brushed stainless handle with lanyard hole. Back of handle has belt/pocket clip. Sells for $98.99 + tax. Asking $50.

-Clock, Seiko brass clock with world time, second hand has airplane on tip. Beautiful quality and condition. $100. (Sorry, price not negotiable) (Picture on Internet)

-Inline Skates, Rollerblade Metro Blades. Removable Tennis show allows skating downtown and popping off the blades, or how about on the way to class, and then just undo buckle and you have a regular tennis shoe! Cool, No? Wheels, brake and everything else in great condition. Men's size 9 1/2. (Picture on Internet) Asking $40

-Inline Skates, K2 "Fatty" stunt skates. Top of the line! Wheels, brake and everything else in great condition. These are great quality skates! For the hardcore blade enthusiast. Perfect for riding rails, steps, curbs, benches, or skating on whatever else you attack! Men's size 12. (Picture on Internet) New for over $250. Asking $65

While there are other shippings costs besides what UPS charges, the shipping rates from other retailers are usually much lower and closer to price charged by the shpping carrier. Also keep in mind that large companies may be able to negotiate bulk shipping rates with carriers, so the rates they pay to the carrier should be lower, if anything, than normal rates.

2617. Reception on Yupi was Re: reception: what should i expect?

Newsgroup: rec.radio.scanner
Date: 1999-02-25 00:00:00 UTC
From: hurst_m@hotmail.com
Message-ID: <7b25cbjha1@nnrp1.dejanews.com>
Source record: 126508
Cross-posted to: rec.radio.scanner,alt.radio.scanner

The Yupiteru line of scanners are very sensative. Without knowing what model you have, its difficult to say more. The MVT-7100 (and probably the 7200) do not come with a separate antenna for the AM broadcast band. Due to the low frequency of these signals, the wavelength is very large. Thus, the telescoping antenna is not very effective in this band. Most radios have an internal loopstick-type antenna for lower frequencies. I notice the same problem on the AM band on my Yupi. Then again, I bought it for the scanner and shortwave coverage, not for AM.

Reception difficulties on the FM broadcast band could result from overload or intermod. IF there is a strong FM transmitter near you, the radio will be less sensitive on this band. I have this problem when using the radio at my house, which is within a mile of a strong FM station. Also be sure the radio is set for WFM, not FM for the broadcast band since FM on the Yupi means narrow FM. Try listening to the sound carrier of a distant television station for channels 2-6 or 14-69. (Channels 7-13 are in the 174-216 band, which is plagued by images of FM broadcast stations of the Yupi).

Source record: 126513

Anyone have a Sams Photofacts or repair manual/schematic for an Electra Bearcat 20/20 scanner? Would you be willing to loan it out or make copies? I am trying to get an old one going again. The analog section seems OK but the scan function will not work. The display is lit, memory and keypad seems OK. I can togggle through by punching manual or scan buttons. The 7805 regulator, 33 ohm 5 watt resistor, a 1/4 watt ajacent resistor on the corner of the feature board runs very hot.

Kevin,

The MDT Monitor application can either use your soundcard, the Hamcom interface, or the RM100 decoder. Tapping the discriminator is pretty easy. See http://web2.airmail.net/lblant1/dfw/interface.htm for detailed information on how to tap the discriminator on the BC-895, and for detailed information on how to build the Hamcom 2-Level FSK interface.

> for the help! <glenn>

The most common frequency pairs to check are:

30.8400 --- 154.5700
31.0000 --- 170.3050
33.1600 --- 154.5100
33.4000 --- 154.5400
35.0200 --- 154.6000 *
154.5700 --- 170.2450 *
154.6000 --- 171.1050 *
457.5375 --- 468.3875
457.5500 --- 467.7750
457.6000 --- 467.8250
461.0375 --- 466.0375
460.8875 --- 465.8875
461.0875 --- 466.0875
469.0125 --- 464.0125 *

If they're using "3M" or "GM" headsets then you need to search
from 920-922 Mhz Wide FM for the speaker frequency and from
903-905 Mhz Wide FM for the headset frequency.

Check out the following URL for a complete list:

> In YOUR case, you've done BOTH!!!!!

Maybe so, but there's a BIG difference chief. You post replies because you are deluded enough to think people actually believe you after all the years of being proven a bold faced liar. You are stupid enough to think that your opinions and views are those of everyone else. You are dumb enough to actually believe that you alone can govern what is said on this group. You desperately want everyone to like you. Personally, I don't give a shit if people like me or not - I have just as much right to be here as you do, and I could care less what anyone here thinks of that. That's what separates you and me, jackass. Stick that in your fruity-ass peace pipe and smoke it Fag-Boy.

What you hear through the speaker is pretty routine, but it's a fun catch anyway, and sometimes you get a surprise. Bob Grove can't resist turning on the scanner when he passes a fast-food chain.

FAST FOOD SMORGASBORD
By Bob Grove

"Welcome to McDonald's. May I take your order?" How many thousands of times every day is this friendly greeting parroted across the country? And how many scanner enthusiasts tune in 154.600 and 35.02 MHz as they drive past interchanges on our nation's highway system?

But the big arches are not the only architecture to house friendly fast-food frequencies. Just about every chain with a drive-by kiosk has two-way intercommunications with its customers, using frequencies in low band, high band, UHF, and even 900 MHz.

While the belt-worn transceivers are low power, the fixed repeater can usually be heard for a half mile or more. A local McDonald's restaurant uses a Panasonic system known as the "Order Taker," a likely name, indeed. A nearby Hardees' system is made by H.M Electronics. While the radios are usually sub-audibly tone encoded to avoid interference (see Table 4); some cases of intentional interference have led to substantial fines and suspension of FCC licenses when hams have abused their radio privileges.

Some unintentional interferences have proved amusing. A church reportedly installed a wireless public address system on the same frequency as an adjoining fast-food restaurant. As the minister raised his eyes skyward and requested divine guidance, his parishioners heard the electronic reply: "Cheeseburger, all the way, hold the mayo!"

Clerks frequently switch to internal intercom without realizing that, while the customers can't hear their comments, stalwart scanning enthusiasts can. Common fare includes discussions of dates, working conditions, other employees and their employers, and remarks about customers. When the scanner listener happens to be the customer, he reaps a particular delight in catching the employee off guard by responding to what was suposedly a private remark.

A short time ago we learned of one resourceful and highly unlawful prank pulled by a ham with a crossband-capable transceiver. Poised between two prominent fastfood restaurants, he tuned in the customer frequencies from one restaurant and retransmitted it to the competitive restaurants' order takers. Wendy's order takers were understandably miffed when they were getting orders for Big Macs, while McDonald's clerks were scratching their heads figuring out how to serve up a Frosty! It may seem like harmless fun, but don't do it!

This month MT takes a look at the vast, largely unrecognized spectrum shared by these harbingers of hamburgers. We owe a special debt of gratitude to Bob Eisner for sharing the largest and most-up-to-date list of fast food frequencies ever published.

The list was last updated in JULY 1997.

In the US there are three brands of Wireless headsets for Drive
Thru Restaurants.

Panasonic - Operates in the UHF band (450 - 470 Mhz range)
HM Electronics - Operates in the VHF-low/VHF-High Mhz range
3M - Operates in the ISM band (902 - 928 Mhz Wide FM)

Any idea on who manufactures that headsets that you've seen?

2640. WS1000 800Mhz Antenna?

Newsgroup: rec.radio.scanner
Date: 1999-02-25 00:00:00 UTC
From: mikestuber@hotmail.com
Message-ID: <36d4b5f3.183875268@news.voicetek.com>

Where can a guy get a replacment antenna for the Welz WS1000? I read the review on StrongSignals and I'm only interested in the 800Mhz band and this antenna is the one I'm interested in. Unfortunately, I can't find anyone who carries replacments. Does anyone have the contact information for Welz?

TIA,
Mike

Last I knew, the OS456 was only for the PRO-2005/2006. For computer interface/control of the PRO-2004, you need the CE/HB-232.

Finland has been having trouble with mail delays due to strikes
by postal workers. Once the radio is shipped, give it up to 1
month for the radio to show. Normal delivery time from that
part of the world is typically 2 - 4 weeks.

Doubtful you'll be able to contact Welz since they are a name
stamped on the radios made by Standard(WS1000=AX400, WS2000=AX400B).
Try going through a radio dealer that carries them. That would
mean one in Canada or over in Europe. Ask them to order a
replacement for you.

LOTS of places view the shipping department as a profit center--just
look at Columbia House or BMG's CD clubs...

: U have to find a IF output at 455 or 10.7 or 10.85 or whatever your
: scanners IF is.

Any scanner actually use 10.85 for an IF? I though that 10.7 was a specially designated frequency for this purpose by the FCC, to avoid interference both ways, to and from radio receivers, especially FM broadcast receivers. Same with 455Khz.

For a similar reason, FM broadcast stations cannot be allocated within 10.6 or 10.8 Mhz from each other in a given city, subject to a special category of station spacing rules.

Shinwa SR-001

25 to 999.975 MHZ
NO GAPS!
AM/FMN/FMW
200 Channels 10 banks of 20
10 search ranges
Scan speed: 35Ch/SEC

2 antenna inputs 1-BNC 1-TYPE N
User selectable steps 5, 10,12,5, 20,25,50,100 kHZ

Triple Conversion Receive
13.5VDC

Dimensions: 7WX2HX6D

Comes with infared remote control that can control all funtions of the radio
and the original user manual.

Looks great, works great

Multi Color LED display shows FREQ, MODE, STEP,Scan Resume mode, DELAY, ANT
Signal strenth meter, Channel, and much more.

Looks like an AM/FM car stereo and could probably mount just fine in the
radio slot.

Terms:
$400 US Postal Money order or cash
Includes UPS Ground to the continental US

Not interested in trades.

Number 4 above is Chairman Bliley of the House Commerce
Committee who was serve with two letters asking for his
Committee to investigate FCC Chairman Kennard for
failure to execute and enforce the Communications Act
on criminals within the FCC and FBI who illegal jammed
broadcasters. Even though Bliley has purview in this
case, he refused to make Kennard account for his
knowing and willful misprision of feloney (18 USC 4).

If you want to punish the traitors, contact your
Congressman and ask him to force Henry Hyde to convene
the Judiciary Committee to investigate Chairman
Bliley to determine why he allows criminal activity
within FCC to continue uninvestigated. Details at
the website below.

I am selling a Fluke Scopemeter 96B

It has been used less than 5 hours.

It still has the protective sticker on the screen. Mint.

Comes with all of the original connectors, cables, clips, probes.
AC power supply, rechargeable battery pack.

I am including a Pelican case with it free.
Original box available.
Manuals, etc.

$1000

Fedex COD. I pay shipping.

Hello All,

I am in the need for VHF frequencies (150-155ish) that are used by
race teams for off road racing in the Southern California/Nevada/Mexico
area, (like the ones used at SCORE/BAJA) I will take any location also.
If you know who uses these frequencies also would be of help.

Thanks,
Danny Barker

Please forgive my ignorance in this matter. Scanning and this issue is new to me. But isn't this bill backwards? I mean, shouldn't it be the the cellular industry who needs to guarantee privacy using encryption or some other digital system instead of pushing for a bill to ban reception? It's like blaming the water for making the boat sink. Maybe they should build a better boat.... I guess what the industry is really afraid of are the costs involved to secure their cellular networks. They want somebody else to pay for it. And as usual, the best way to go in the US seems to be to take away another bit of freedom. Freedom is so cheap.

It's striking that on the net we all know that if we need or want real privacy we need to use encryption. When the medium is airwaves instead of a piece of wire we call the internet, the cellular industry and the politicians all of a sudden become very ignorant. The cell industry has a problem because they do not want to pay for extending the infrastructure with encryption, and the politicians have a problem with encryption in general. We don't want to make Big Brother's job any harder, now do we?

The Nazi's forbid people in Europe to listen to their radios, and they had to turn them in. This simply because the gov. did not want them to listen anything else than their own propaganda. They even sold radios that were only capable of receiving the Nazi propaganda and nothing else. This let to a strong believe in many European countries after WWII that an individual should always be able to listen to whatever is in the ether.

Now the US government is putting up the same type of restrictions as the Nazi's did some 60 years ago, and since it has been voted on we call it a democratic decision which reflects what the people want?

Has anyone ever tried to give a unambiguous explanation of the expression "readily accessible"? Is it something like, if you can buy it at RS it is readily accessible?

I agree. I've read Pop comm for years and find it to be a quality publication. The articles are well written and informative and the products advertised are relevant to the subject of the magazine - communications.

I've always thought that more could be added to the scanner sections of the magazine, but that's just me ;-)

Mr. Ward does a fine job with Pop Comm, and I think $11/yr is an excellent bargain for a magazine like this.

>heard that LAPD uses this system as well. Is there a scanner on the
>market that can pickup the XTS 3000 motorola signal and decrypt it.
>Any info would be helpfull ...

OK. Firstly, to answer your immediate question the answer is no. If you need to listen to an ASTRO system the only way to do so is to buy an ASTRO transceiver from motorola and have it programmed for receive only (this is very important, should the police find out you have one) on the desired frequencies. This will cost you about $3000 US for the radio plus whatever the dealer charges for programming.

Now, to answer your encryption question, the answer is no. Here in the US even attempting to decrypt an encrypted signal that was not intended for you is illegal - I don't know what Canadian law on the subject is. But that isn't to say it couldn't be done. Someone here in the US is working on an APCO-25 compliant decoder board for use in your PC, and he brought up a valid point. Since all digital transmissions use a packet preamble sequence to let the radio know where the actual data is, one could conceivably receive the encrypted packet preamble and try every possible key combination against it until you got a valid preamble sequence. You would then have the key to decrypt the message. Of course, before you could do that, you would need to know the ASTRO protocol to determine what a valid packet preamble is. Once you have that, then you would have to construct an appropriate computer interface board and write a program to decode the bits coming in. Finally, a Vocoder board is required to receive the decoded signal and convert it back to audio, which runs about $1000 US. Not a job for the novice, or even average scannist.

Currently, if the signal is digital and encrypted, there aren't any products that I know of that can do it. You would need to build the solution yourself.

They are most emphatically *NOT* ignorant on this! It's just cheaper
to buy a congresscritter than to fix infrastructure.

Three years ago I got a cellular phone. Instead of the $.01 phones that
were the rage at the time, I spent $170 on a TDMA phone with voice
scrambling. (Scrambling isn't encryption, but you take what you can get.)

Since then, fewer and fewer calls go through cells that are capable of
scrambling.... I haven't had a scrambled call in over a year. (The phone
notifies you if the call isn't scrambled.) I got a chance to see a
cell site open and all the new TDMA equipment isn't capable of scrambling.

I don't think it's too much of a stretch to say that current infrastructure
which *supports* some privacy is being replaced with cheaper equipment
when updates are done. In other words, privacy is getting WORSE, not
BETTER, and it's happening DELIBERATELY to save money! (y'know that
extra $10 a cell site and $.15 a phone really cuts into the bottom
line....)

> The cell industry has a problem because

Where is the most current text? I would be shocked to find the restrictions re "illegal to decode proprietary signals" section to be gone. Is there any doubt this is/was the primary reason for this bill? All the other stuff is the usual sugar coating to make it look like some dark menance to society is being dealt a firm blow.

> Because digital modulation methods are not readily accessable to the public
> it is unknown how this bill will effect the development of digitally capable
> scanners. A great deal will depend upon how the FCC writes the implementing
> regulations.

The last version of the bill I read was abundantly clear: if the "modulation method" is unknown to the public, it can't be decoded lawfully. The FCC will serve as a repository of the proprietory methods one isn't allowed to decode.

We can be sure *all* of them will be submitted. MDC4800 [the MDT's], EDACS, the whole lot.

Basically, this bill is sop for the telecom companies. They want to enshrine their precious "proprietary" formats as law (via regulation), not merely trade secret [and thus vulnerable to reverse engineering -- such as that which is now occuring via the Internet] or patent [which ultimately expire, and cost real money to obtain and enforce]. And on a shorter time scale, they simply do not want to build privacy into the systems they sell (despite clear and abundant indicators there is a market for this). It saves them a few bucks per unit sold on development costs ... and the inevitable meeting from NSA and FBI representatives (and the killer bureaucracy that results).

You, average US citizen, receive no benefits from this legislation. Your privacy -- such as it is -- is not protected, and is arguably in a worse state [EPIC's support for this bill is thus a complete mystery]. Your civil rights not in any way advanced, despite the idiotic prattle from Congress.

FCC rules have nothing to do with choosing an intermediate frequency
for a scanner. Many Bearcat models use 10.85 MHz and 0.45 MHz IF,
including the latest BC235XLT, BC895XLT, and some 1976-vintage BC250s.
The Uniden-built Radio Shack PRO-67 is another example.

450 kHz is popular, too.

Can a Trunktracker handle an ASTRO system? I guess the more basic question I'm interested in is whether a Trunktracker can handle a digital system. Here's the situation: I notice that the Metropolitan Washington Airports Authority uses an ASTRO system. I thought ASTRO systems were digital, and therefore could not be handled by a conventional scanner. But I have found talkgroups for this system, and that must mean that someone has used a scanner successfully. Is it possible that the system is ASTRO, but is not using the digital capability? Finally, where does the APCO-25 standard fit into all of this? Sorry this question is so loaded, but I'm trying to get all this technology straight in my head. Thanks!

GREAT SOUTH BAY AMATEUR RADIO CLUB & SUFFOLK COUNTY RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST - MARCH 7, 1999

On March 7, 1999 the Great South Bay Amateur Radio Club & Suffolk County Radio Club will again sponsor an indoor Hamfest. The location will be at the:

Knights of Columbus
400 South Broadway
Lindenhurst, Long Island, NY

There will be radio equipment, electronic componets, computers and access-ories, softeware, books, technical manulas, ARRL information, Amateur Radio License Exams, Door Prizes. General admission is $6.00.
Free Admission for spouses and children under 12.

VE - ARRL - 12:00 NOON
For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID), and the examination fee, to the exam session. 1999 ARRL/VEC fee is $ 6.45, exact change is appreciated. Novice exams are free.
The VE team is from ISLIP ARES Group and GSBARC. Thanks guys.

For vendor and additional information pleas contact, Peter Portanova WB2OQQ at(516)541-4886. Email info@gsbarc.org

Talk-in will be via W2GSB Repeater on 146.685 4Z(136.5) PL.

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 pm on the W2GSB repeater, 146.685 -600 4Z(136.5) PL required. You may also write to:

From the press release dated 2/17/99, found on www.whitehouse.gov:

On Saturday, February 27th, the President will hold another event, TBD, in Los Angeles. He will remain in Los Angeles until the afternoon of Tuesday, March 2nd, with no public schedule for the remainder of his stay, and then return to D.C.
The second travel announcement -- we'll come back to the obvious question there -- travel to Arkansas and Texas March 12 through March 14. On Friday, March 12, the President will travel to Hope, Arkansas, to formally dedicate his boyhood home. He'll then go on to Texarkana to attend a dinner for Representative Max Sandlin Friday night. Overnight is to be determined -- either Texarkana or Little Rock. I'll let you know as soon as that is resolved.
And on Sunday, March 13, the President will attend a DNC fundraiser and State Democratic Party in Little Rock. He will stay overnight in Little Rock and return to D.C. Sunday afternoon. I'm sorry, that's Saturday, March 13. No public events planned for Sunday

Get your scanners ready!

-Phil

> Can a hand held scanner and a hand held cb both in a car use the same mag mount
> antenna?

Of course you wouldn't want to Tee-connect them together.
Remove the coax from the CB before attaching to the scanner
so that you don't blow out the front end on the scanner.
Impedance matching for scanners is not as critical as
for CB, therefore in selecting a mag-mount look for
one that is designed for a CB so that you won't burn
up the final amplifier. Whereas there are mag-mounts
designed for scanners, I doubt that one can cover the
range from 30 to 900 megahertz without some gaps. I have
seperate antennas for each.

Want to remove the FCC from authority, contact your
Congressman. Have him force Henry Hyde of the Judiciary
Committee to convene a hearing into criminal coverup
by FCC Chairman Kennard and Commerce Committee Chairman
Bliley for felony conspiracy and misprision of felony
pursuant to the issue detailed at the website below.
Kennard refuses to execute and enforce the Communications
Act against criminals in FCC and FBI who jammed broadcasters.
Bliley is aware and is a co-conspirator.

Your statement is partially true, some European countries have
banned equipment which can listen in on the band from 11 meters
(26.1 MHz) to 30 MHz because this is used by police. This is
very stupid legislation because many shortwave receivers cover
150 kilohertz to 30 megahertz without gaps.

Part of the problem with the poorly thought out restrictions in
this country came about because of the Gingrich interception, and
because Congressmen know that they discuss very incriminating
matters on unsecured cell-phones. It is a measure to avoid
criminal prosecution and the efforts of "opposition research"
by the opposing party, not to protect the people.

Want FCC out of the control business? Contact your Congressturd.
Have him force Henry Hyde at Judiciary Committee to convene a
hearing to investigate FCC Chairman Kennard for failure to
execute and enforce the Communications Act against criminals
in the FCC and FBI who jammed broadcasters. Chairman Bliley
at House Commerce Committee has oversight, full knowledge and
is a co-conspirator in 18 USC 4 (Misprision of Felony). Details
at website below.

That is the most coherent argument yet! We need you to lobby in the senate.
Ahh never mind those spineless sheep couldn't pour piss out of a boot let alone
understand a brilliantly simple statement statement like yours.
Damn! Great argument! We all need to use this example in our letters and
E-mails to the senate.

I enjoy pop comm too it is a good all around magazine for radio enthusiasts
.>I've always thought that more could be added to the scanner sections of the
>magazine, but that's just me ;-)
Me too. I would like to see a little more emphsis on scanning and SW utility.
but overall it is a very good magazine

Up until I moved out my last house, I was using the largest Radio Shack TV antenna of the log periodic type. I fashioned a simple T pole by brazing 2 pieces of galvanized antenna pole. I was able to insert the base of the "T" into the rotor, and mount the antenna on on leg of the "T" in order to have it vertically polarized...

Very effective antenna.....

2692. squelch,S-meter issue with Icom R7100 and Scancat

Newsgroup: rec.radio.scanner
Date: 1999-02-26 00:00:00 UTC
From: "M.Stanton" <mstanton@centuryinter.net>
Message-ID: <B0LB2.3299$_m5.777040@newsread1-mx.centuryinter.net>
Source record: 126383
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.shortwave

I would appreciate some help with the following problem:

I have recently interfaced an Icom R7100 receiver to a PC using the CI-V interface (also an Icom product). I am able to use the scancat demo program successfully in most respects except for the inability of the program to read the S-meter....I have tried all settings available but either the S-meter swings back and forth randomly or it doesnt respond at all.....needless to say, that without this feedback from the radio, this whole effort is not worthwhile....I would gladly buy this software if it will work with my radio.

Anyone out there who has experience with this???

thanks in advance...

Mike mstanton@centuryinter.net

2694. Re: MIR?

Newsgroup: rec.radio.scanner
Date: 1999-02-26 00:00:00 UTC
From: Xenon <xenon@krypton.org>
Message-ID: <C6A44F6EF34FC408.DFB1A2F93E461858.665EB60A273D7339@library-proxy.airnews.net>
Source record: 126385

It is very easy to tell when MIR is passing over.
Just go outside and if space junk hits you at several thousand miles per hour,
then MIR is overhead.

Justin Fielding wrote in message <7b9hld$3ld$1@mendelevium.btinternet.com>...

2695. Who on 30.45 MHz?

Newsgroup: rec.radio.scanner
Date: 1999-02-26 00:00:00 UTC
From: Toscano <toscano2@ix.netcom.com>
Message-ID: <7b4eqs$e7i@sjx-ixn9.ix.netcom.com>
Source record: 126453

I live in Massachusetts and we are under a blanket of snow (still falling...) and I have heard some interesting skip today on 30.45. I know it is a military freq but I am just curious as to whom I am hearing. It is in the Central time zone, there are no formal callsigns, it seems to be a range control freq. Mentions of "inspector coming down to mortar section zero-two-five" and "cease fire until furthur notice". No female voices heard, all males, seem to have slight southern drawl. Which bases could this be? National Guard, Reserves, or regular Army? USMC? THANKS!!!

2696. Re: Who on 30.45 MHz?

UPDATE...
I just heard "Brown's Creek range to Range Control"...
Any ideas?

2697. H.R. 514 - what it does, and doesn't

Newsgroup: rec.radio.scanner
Date: 1999-02-26 00:00:00 UTC
From: jtward01@aol.com.nospam
Message-ID: <19990225190027.21678.00000291@ng136.aol.com>
Source record: 126455

What it does:

The bill has four main components. First, the bill extends current scanning receiver manufacturing restrictions to prevent the manufacture of scanners that are capable of intercepting communications in frequencies allocated to new wireless communications, namely personal communications services, and protected paging and specialized mobile radio services. Second, the bill prohibits the modification of scanners and requires the Federal Communications Commission (the Commission or FCC) to strengthen its rules to prevent the modification of scanning receivers, including through the adoption of additional requirements to prevent the tampering of scanning receivers. Third, the bill makes it illegal to intentionally intercept or divulge the content of radio communications. Lastly, the bill improves the enforcement of privacy law by increasing the penalties available for violators and requiring the Commission to move expeditiously on investigations of potential violations.

What it does not:

H.R. 514 does not effect the public's ability to monitor radio communications transmitted (a) over a system that is configured for ready access by the general public; (b) by any station for the use of the general public, or that relates to ships, aircraft, vehicles, or persons in distress; (c) by any governmental, law enforcement, civil defense, private land mobile, or public safety communications system that is readily accessible to the general public; (d) by a station operating in the amateur, citizens band (CB); and, (e) by any marine or aeronautical communications system.
Because the Committee preserved the Chapter 119 exceptions in its amendment of section 705(a) of the Communications Act, the Committee does not intend for the Commission or any other enforcement agency to investigate or fine parties for the interceptions authorized by Chapter 119. Therefore, the Committee does not intend for uses of scanning receivers and receiving radios such as shortwave radios, that are consistent with the section 2511(g) exceptions to be investigated or fined under section 705(a).

Unknown:

Because digital modulation methods are not readily accessable to the public it is unknown how this bill will effect the development of digitally capable scanners. A great deal will depend upon how the FCC writes the implementing regulations.

2700. ## What are the VFO frequencies of the AR-8000 and BC-3000 as function of received frequency?

Newsgroup: rec.radio.scanner
Date: 1999-02-26 00:00:00 UTC
From: tinkerman97@usa.net
Message-ID: <F7qL0H.n2H@news2.new-york.net>
Source record: 126458
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner,rec.radio.amateur.equipment

Hello Netfriends,

I want to use one of my scanners (BC-3000XLT and AR-8000) as weak,
general purpose signal generators, exploiting the normally unwanted
phenomena of VFO radiation (both direct and leakage to antenna).
Due to the complex conversion schemes of these radios (up/down
conversion) I'm completely at loss to try to find this out by myself,
as the VFO frequency is no longer +/- IF from the received frequency.
Can someone help me out and provide me with this info?
In addition, does anyone have another idea for a wide range frequency
synthisizer such as described above?
Thank's in advance for any help offered.

Thanks and best regards,
T-man

Note: when Replying, please email me directly in addition

2705. Re: bandercom shipping delays

Newsgroup: rec.radio.scanner
Date: 1999-02-26 00:00:00 UTC
From: Oscar <captorb@hotmail.com>
Message-ID: <36D62054.F163B785@hotmail.com>
Source record: 126463

Paul, this is Oscar again. I received a very nice letter from Peter Peltola of Bandercom re my e-mail to you that I also posted on this newsgroup.
I have to apologize to Bandercom and Peter for my impatience but I'm not one to wait for 2 to 4 weeks for a delivery. My frustration was not knowing what was happening with my order. Last night I contacted my credit card company and I hadn't been billed so I figured my order was forgotten. Pete explained all this to me in his e-mail today.
BTW, even though I canceled my order, I was very much impressed that Peter reads this newsgroup and responded in defense of his himself and his company...sounds like Bandercom is a class act. But please keep your customers informed.
I became apprehensive because of customs but also because not too long ago I lost $400 from a local merchant who conveniently took my money, told me to come back in two days to pick up my merchandise, and behold doors closed, business bankrupt.
Pete, sorry for any inconvenience. Here in America we have a saying, "Once bitten, twice shy." I will gladly pay your shipping costs.
To the readers, sorry for this long epistle but it is a public apology to a merchant who appears to be reputable and customer oriented.
Oscar

Gerry,

Go for it!

This one does not need to be " tried." Once you start using it you'll find
out that a scanner application doesn't need fancy windows and icons.
Very easy to navigate.
I have gotten scan speeds of 80 + channels per second.
Very professional program and great tech support!

tom

I know this is primarily a USA frequency newsgroup, but I was hoping that someone could help me find some VHF/UHF frequencies used in Paradise Island, Nassau Bahamas. I will be on my honeymoon down there and I would like to know the following:

1) What frequencies are used by the Atlantis Hotel?
2) What Police/Fire/Ambulance frequencies are used there?
3) What approach/departure frequencies are used by the Airport there?

Even if you don't know the specific frequencies, perhaps you could point me to some book or someplace on the web where I can get this information. In return, I might be able to help you with info, as I have a Percon CDROM USA database. I appreciate any and all help. Thanks,

Hi all
I know that you can use two radios of the same tuning characteristics to demodulate SSB transmission. I use it every day to demod HF airband and Volmet info, as well as Radio Fax TXs. It's a bit dubious, and is very temperature dependent (the warmer it is, the better the two radios stay in tune with each other) so fairly cumbersome. For me, it works fine. But I have a couple of questions.

Why does a radio give an output at all? I also have an analog AM aircraft band receiver which can transmit what sounds like a carrier onto the aircraft band of my scanner. This is the same principle, but why does it happen and can I use this principle to transmit?

Is there any real-time SSB decoding software for soundcard available on the WWW? I have tried processing a SSB signal using various wav editors and just can't make it sound authentic. I have tried modulating it with a sine wave at various frequencies to no avail. Is there a way I can do this?

Thanks in advance
Richard Greaney

> are sometimes used at the end tranmissoins on EDACS trunking systems?

No (with the included software).

The unit itself is just as it has been described: a PRO-2042 with an
OptoScan 535 board. A VERY sensitive receiver with built-in CTCSS and
DCS decoders. CI-V interface allowing computer control and Reaction
Tuning with the Scout. Discriminator output for digital signal
decoding assistance. Lots of space inside for third party companies
to add their own radio modifications as well. This should give the
radio long-term viability and make it very popular with the hacking
crowd.

Has an OS535 emulation mode that allows it to work with current
software that supports the OS535 board like PROBE, ScanCat, Scan*Star,
RadioMax, Listening Post, etc. Unit comes with TrakkStar for doing
simultaneous trunking and conventional scanning. Works well. Also
comes with Opto's control program which allows for remote control
of volume and squelch as well as tuning and display of CTCSS, DCS,
LTR and DTMF data. Comes with demo of Radio Manager as well.

Has a stand-alone mode that allows up to 100 freqs to be downloaded
and scanned without need of computer hookup. Works just fine in my
testing!

All receivers today are conversion receivers and it is the way they work:
The input signal from the antenna is mixed with an internally generated
signal (that's the one you receive on the other radio) to produce
an intermediate signal. Filtering and demodulation is done on this
intermediate signal and for convenience the filters operate at a fixed
frequency (the IF), while tuning is done by changing the frequency of the
internal oscillator.

It's not possible to decode SSB from the audio-output of a non-SSB receiver
in principle. SSB processing must take place before the IF-signal enters
the AM-demodulator. So in order to process SSB you must extract the
filtered IF-signal from the radio. It's frequency is at 455 kHz, far too
high for soundcards.

Hello,

For sale: Alinco DJ580T dual band (2m/440) handheld transceiver. Also included is a Mastercharger I rapid charger and a 5 watt battery pack. Dual receive VHF/UHF, tone encode/decode, etc.

Price is $225 or BRO, payment by Postal Money order, I pay your choice of UPS or USPS shipping. USA sales only, no trades, no COD. Dealers charge more for just the radio!

HELLO,

U have to find a IF output at 455 or 10.7 or 10.85 or whatever your
scanners IF is.

Then, build a demodulator using a Ne602 or Ne612 and a crystal or coil tuned
to that IF frequency.

Bottom-line, you need IF output, and cant just process audio output.

Actually, SSB signal after regular AM detector looks like being passed
through rectifier. In theory you can write the program that will restore it
by switching phase when crossing minima. In practice it will be a challenge
to make it noise insensitive. It will be cheaper to get SSB capable radio.

Two questions.. I have a Uniden BC700A mobile/base scanner. I ran across a mod on the internet that said all I had to do to restore Cellular freqs. was to remove a SMT resistor that resides next to the CPU on the back of the faceplate. Does this sound correct? Has anyone out there performed this mod?

Question 2: If my scanner is cellular blocked, why do I receive phone conversations up around 912Mhz?? I also notice when I am monitoring these conversations, alot of the time in the middle or even the beginning of a them, I will hear a tone about 2-4 times and the transmission seems to be cut off. What is this tone I hear? Is it a repeater of some sort switching the conversation to a different freq. or what?

I am new to Scanning and think I might get alot more interested in it. Thanks in advance for any info!!!

David

P.S. the date code on my scanner is 'OLIC' I think that comes out somewhere around December of 1993.

I would prefer to see some sort of rating system where you start with a perfect '10', then deduct points for various things such as manuals missing, scratches, age (if applicable), etc...

With the rating system you gave, it would assume, for example, that you could not have a 5 year old radio without major scratches...

From specs at http://www.aorusa.com/ar7000.html I can't
determine whether this is a scanner or something else. Scan
rate is 20 chans/sec, too slow for a scanner; since there's
no synchronouse detector, it doesn't qualify very well as a
world band receiver. What is this new $1500 DSP toy?

Dave,

I was probably the one who posted the talkgroups related to the MWAA system. The MWAA system is an APCO-25 compliant trunked system, but the control channels are still the standard Motorola Type II Smartnet data. That means that your trunktracker will decode the control channel, and thus display the talkgroups. But, since the system is exclusively using ASTRO Digital modulation, your trunktracker will not be able to recover the voice audio. You will hear nothing but digital noise on the talkgroups.

Now, you probably are wondering how I figured out the talkgroups for the system if the trunktracker can't decode the digital audio. Well, I also own a Motorola ASTRO Saber, and I programmed the repeater outputs from the system and scanned them alongside my Trunktracker and Trunker.exe setup. When I saw a talkgroup go active on my trunktracker, I made the correlation to the ASTRO Saber's programmed frequency. Thus, I was able to recover the voice on the MWAA system by monitoring the repeater outputs, and then correlate the talkgroups to their uses via the trunktracker and trunker.exe.

For more information on the MWAA system, see the following link at my trunking homepage:

http://web2.airmail.net/lblant1/trunked/va/mwaa.txt.txt

For more information on the APCO-25, ASTRO and other digital standards see:

http://web2.airmail.net/lblant1/trunked/astro.htm

Good luck, and happy trunking!

Last night while scanning Customs ops at the Salt Lake Int'l Airport,
Customs wanted INS to nab someone for them. I discovered I have
almost no info on INS freqs. Can anyone help?

Jon

Try removing the last parts of a location: www.angelfire.com/ok/ozzhead/

This brings up a home page to scanning. Good page

What was posted: www.angelfire.com/ok/ozzhead/upperfastfoodfreqs.txt

I have two HT-1000's for sale.

Model # H01RDC9AA1BN NX

UHF 403-470 mhz band split.

Both radios come complete with 1 battery each, 1 antenna each and 1 charger stand each. However, there is only one power pac for the charging bases for the two radios.

These are two channels radios that can be converted to 16 channels.

Radios are in working order. There were previously used by a volunteer fire fighter on his department's channels (the dept switched to 800 mhz trunking).

Radios are in good shape. I would say 8.5 out of ten.

I can supply serial numbers upon request.

Asking $600.00 for the set or best offer within reason.

Email to N6RHL@mho.net with any questions or offers.

Please email any quetions or offers etc.. to my personal email account as I do not check the newsgroups very often.

Thanks, Dave..

You could also get a handheld Global Positioning Receiver (GPS) that will give you virtual atomic clock accuracy. The least expensive models are around $100, while those you can interface to your PC start at $150.

Just make sure you get a 12 parallel channel model, a computer interface model (if you want), and don't worry about an external anetnna option, as the connectors and cable used quickly negate any potential improvement and external antenna might provide.

There is ta least oen GPS newsgroup, and a web search on GPS will probably get hundreds, if not thousands, of responses. You'll also find info in hunting, boating, and similar catalogs.

You infer wrongly, this is only a gesture of giving
the enemy the opportunity to surrender immediately
before slaughter. The Constitution did not die during
the failed Clinton trial, it died in 1968 with the
Gun Control Act, and America's spirit was buried
alongside of it.

In any revolution, three critical assets must be
controlled: transportation, utilities, and most
importantly....Communications. Only an illegitimate
government would take such obvious strategic military
measures against the people.

None are so blind as those who will not see.
You can read the confession by FBI's John Kaul at:
http://www.atlcom.net/~geozim/docs/fbi_ging.htm
beginning at third paragraph, starting with "It
is essential..." FCC admits to holding classified
documents on the amateur station at Mount Carmel
Center and the two Extra Class operators there.
In addition FBI jammed licensed AM and FM radio
stations and TV stations in the Waco, Texas area.
Ambassador Holmes of DOD, additionally states that
US Air Force aided in jamming TV stations.

You can launch your own effort to find out if
any Elvis was present. FBI has my FOIA request on
a 5 year backlog; FCC has patently violated the
exemption requirements of FOIA, claiming that
further responses would allow me to home in on
the nature and content of the classified documents
pertaining to jamming operations. FCC illegally
supplied the jamming equipment to the FBI, according
to the Dallas Morning News.

YOU DECIDE!!! WOULD FBI ADMIT TO A CRIME THAT DIDN'T
HAPPEN???

I saw a post in this group about a frequency counter that was available at radio shack. The price range mentioned was between $20-40. I recently went to Radio Shack and asked about a frequency counter. The counter that the sales person showed me was regularly priced at $99. Is there a place where I can find a frequency counter for less?

Go to www.amsat.org and check out the softwear downloads for the tracking programs. This is the amature radio sat homepage. You will need a traking program and you can also find the updated Keplian element set (bunch of numbers that define how the sats move in orbit the programs need to work).

Jeffrey Herman has just admitted to murder for hire and
felony conspiracy to violate the Communications Act.
What a worthless shitbag.

I am not hiding. The running cowards are FCC Chairman
Kennard, House Commerce Committee Chairman Bliley who
has oversight into FCC misconduct and Congressman Newt
Gingrich who resigned rather than force FCC's Kennard
to account for the FCC part in the criminal jamming.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip

using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas. The Austin Condor is available from Grove Enterprises.
3. The "Thin-Stick" is an 18 inch telescoping antenna for

extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A (available from Amateur Electronic Supply) or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is http://www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (828)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 7825 Black Street Rd., LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency

lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the

scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

All 1999 meetings (except August) will be held on Saturdays at Phillies Pizza, 6300S. Kingery Highway, located in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook, IL,

The 1999 meeting schedule is: April 3, June 5 (picnic at Argonne National Labs), August 7, October 2, and December 4.

The CARMA Picnic will be June 5th, 1999 at the Argonne National Labs Picnic Pavilion, Cass Avenue, south of I-55 in or around Darien or Lemont. The picnic will start whenever someone arrives. The regular meeting will be in the Pavilion at 1:00 PM. If the weather is totally frightful we also have a room inside the Laboratory building available for us.

The Picnic is BYOE (Bring your own everything) If you want to eat or drink, bring it with you, as well as your BBQ or six pack.

rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.
Middlesex, NJ 08846
tel. 908-356-7787

Cal Crystal Lab Inc.
1142 N. Gilbert St.
Anaheim, CA 92801
tel. 714-991-1580

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

G & G Communications
9247 Glenwood Drive
LeRoy, NY 14482.
tel. 716-768-8151

Jan Crystals
Box #-6017
Fort Myers, FL 33911
tel. 941-936-2397

Monitor Crystal Svc
124 W Walnut St Watseka, IL 60970
tel. 815-432-5296

Short product summaries for over 70 scanner models appear in
a separate article, entitled "Scanner Radio Review Briefs."
For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.
Radio Shack PRO-2004	R148 47K remove R148
	or replace with 220K.
	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)
Radio Shack PRO-2006	R152 33K try 100K or higher.
Radio Shack PRO-2022	R91 33K replace 33K
	with 220K.
	Between pins 12 & 14
	on IC-1 MC3361
Radio Shack PRO-2035	100K replace 100K
	with 220K.
	Between pins 12 & 14
	of TK10420 (IC-2)
Electra/Bearcat 220	R75 2.7M may be ok as is
Electra/Bearcat 20/20	R75 2.7M may be ok as is
Electra/Bearcat 250	R66 2.2M may be ok as is
Uniden/Bearcat 760XLT	R58 22K replace with 6.8K
	or other value.
	(select value for
	the particular radio.)
	Located on pin 14
	of MC3359P IC
Uniden/Bearcat 800XLT	R91 860K replace with 2.2M.
	Located on pin 14
	of MC3359P IC
Plectron P1	R81 180K may be ok as is
Plectron 700	R96 180K replace with 560K

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two | rubber belts. The Projector Recorder Belt Company makes | replacement belts which work fine, though they may not be | the original equipment: |

1. PRB SCA8.6 (218 mm) |
2. PRB SCQ 2.5 (64 mm) |

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from
the crystals used in the conventional single channel
Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. If you wish to
purchase a new receiver with "Plectron-like" signaling
capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 - 1999 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A crystal scanner are not working and the lamps for those channels won't light, replace IC4 or IC5 (type 7400A).

archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553. You can also download an electronic copy of the user manual for recent Bearcat models from the Uniden web site:

http://www.uniden.com/docs/service/support.htm

Some schematic diagrams may be obtained from Uniden's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and

2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Matt Roberds fixed a BC220 which experienced memory loss if power was removed by resoldering the positive wire to 2-AA battery holder.

As built, the BC220 logic board is grounded only through its mounting screws. In the BC220, Matt recommends adding real wire ground jumpers from the main board to the feature (logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig replaced a 22uF/35V C98 capacitor to repair his BC210XW.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of

a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Matt Roberds repaired the Montgomery Wards version of a BC220 and contributed these insights:

"I did add some heat-sinks, but you have to be careful what you do with the TIP29 on the logic board. I added a long, flat heatsink to it and immediately created a whine in the audio. I didn't use an insulator, as this was a temporary first-try. As far as I can tell, the heatsink was radiating noise from the logic board into the front end on the radio board, which ended up being just below the heatsink. Bypassing the TIP29 (a voltage regulator) with disc ceramics didn't work; using a smaller heatsink and an insulator fixed the problem."

"There is also a 220 ohm 1/4 watt resistor on the logic board. It feeds the TIP29 from the main +16v supply. It looked a little crispy. I pulled one end and measured the current through it and it was about 30-35 mA. This works out to right at 0.2-0.25 watt dissipation. I didn't have a higher-wattage resistor, so I substituted 2 470-ohm resistors in parallel."

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to

switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855. email rlassoc@inav.net

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $49 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and

store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi

antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Jan 1996 - Plectron & Motorola Alert Monitors
Feb 1996 - Radio Shack PRO-2042
Mar 1996 - Tips for Fixing Bearcat Scanners
May 1996 - Compendium of Scanner IFs
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Aug 1996 - BMI Nitelogger II tape recorder activator
Sep 1996 - PRO-2022 modifications
PRO-2042 baseband audio tap
Oct 1996 - Radio Shack PRO-2046 mobile
Nov 1996 - Build a wooden mobile radio mount
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jun 1997 - Innovative Scanner Patents of the 1970s
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker
Jan 1998 - Test Equipment Bargains
Feb 1998 - Innovative Scanner Patents of the 1980s and Beyond
Mar 1998 - RELM MS-200 mobile
Apr 1998 - RCA RP-6150 portable
May 1998 - Radio Shack PRO-2050 base Trunktracker
Jun 1998 - Opto DC442 CTCSS/DCS/DTMF display
Jul 1998 - Stub and Par Electronics intermod rejection filters
Aug 1998 - Sony SC1PC portable
Sep 1998 - Orange Book of Scanner Repair
Tone Out Testing (2-tone generators)
Monitoring ACSB (amplitude compandored side band)

Oct 1998 - AOR AR8200 portable
Nov 1998 - Alinco DJ-X10T portable
Dec 1998 - Radio Shack PRO-91 portable Trunktracker
Jan 1999 - AOR AR7000
Feb 1999 - Radio Shack PRO-2066 mobile Trunktracker
Mar 1999 - ICOM RS-8500 software for controlling the IC-R8500

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

ALINCO

DJ-X10T: 1998 vintage. Rugged construction - metal back. Multimode frequency coverage 0.1 to 2000 MHz (minus cellular bands). 20 selectable step sizes from 0.05 to 500 kHz. Knob atop the radio clicks when rotated and serves as a VFO knob, channel selector, and menu navigation control. Several battery pack options for NiCd and alkaline battery cases. Furnished with an EBP-37N 4.8 V, 700 mAH NiCd pack and a sturdy 11 hour drop in charging stand. Loaded with firmware features and complicated to use. Two VFOs and 1200 channels in 30 banks of 40 channels each. Memory banks are cryptically designated, though you can scan combinations of banks. Each memory channel can be programmed with the frequency, an 8 character label, attenuator, a skip (lockout) flag, and mode (WFM, NFM, AM, USB, LSB, CW, AUTO). Very slow 6 ch/sec scan rate. Rescan delay is about 1 second and cannot be disabled or changed. Auto Memory Write stores up to 40 frequencies but does not check for dupes. 20 linkable search banks with labels. Up to 50 frequencies per search bank can be locked out. Digital clock with on/off timer. Battery saver can be disabled. Ability to scan or search for signals above a selectable threshold or channels with a specific mode. Band scope 7 or 40 steps wide. In short, 30 - 1000 MHz sensitivity is good, few birdies and little intermod. WFM broadcast reception very good. The DJ-X10T squelch can be set to one of 10 levels. We had to keep the squelch set to SQ3 or higher, otherwise it opens at inappropriate times, especially when the battery saver is active. The DJ-X10T instruction manual does not specify the IF (intermediate frequency) scheme. Filters inside the DJ-X10T imply 0.455, 10.7, and 45 MHz IFs. Our tests indicate a first IF of 736.25 or 275.45 MHz, depending on the frequency to which the DJ-X10T is tuned. Our DJ-X10T hears images of cellular phone signals clearly in the 1419.9 - 1444.9 MHz range, 550.9 MHz above their actual frequency. For a full review, including technical test results, see Monitoring Times, November 1998.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

AR8200: 1998 vintage. S/N 550004 tested. Portable, high end "super" scanner covers 0.1 - 2040 MHz (minus cellular in USA version). Not a scanner for beginners. Many of the settings are made through the use of menus. Lots of features. 4 AA batteries, steel belt clip, plug-in AM antenna. 1,000 conventional channels in 20 banks, 10 temporary channels, one priority channel. Each memory channel may be programmed with frequency, label, mode, step, step-adjust, offset, attenuator enable, noise limiter, AFC, and write protect. Multi bank scanning. You can enable a 0 - 9 second rescan delay with each scan group, but not per channel. 40 pairs of search limits with labels. Offset capability for monitoring repeater input frequency. LCD display easy to read. Display and keypad backlit using green LEDs. The band scope. Shortwave reception stone deaf on shortwave when fitted with the supplied antenna or a 19" whip. Seriously overloaded on shortwave by a 132 foot long dipole unless we use the built-in attenuator. Supplied "dorsal fin" antenna for AM BCB. Scans slowly (14 channels/s). Requires more current. Audio quality is

slightly above other portable scanners. Computer port. One slot for a single plug-in option: voice inversion descrambler, CTCSS search, 256 frequency tone eliminator, voice recorder and playback, or extended (slow) memory. See AOR AR8200 review by Bob Parnass,in Monitoring Times, October 1998, for review with quantitative test results.

ICOM

IC-R10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new

frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency

of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100

components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan,

search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band

scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels

are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review

which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were

used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67,"

by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-91: 1998 vintage. Portable made by Uniden for Radio Shack. 150 channels in 5 banks. Can selectively follow conversations in 800 MHz Motorola trunked radio systems. Censors 823.975 - 823.95 and 894.0125 - 896.1 MHz covered by the BC235XLT. Powered by four individual AA alkaline or NiCd batteries. Power save feature. Program key. One priority channel/bank. One search bank. Direct search. Service search omits many police freqs (inc. 460 - 460.5 MHz). While connected to an outdoor antenna, our PRO-91 experiences intermodulation interference in the 161 MHz range from a paging transmitter on 158.1 MHz. IFs near 380.7, 10.85 and 0.450 MHz. See PRO-91 review by Bob Parnass, in Monitoring Times, December 1998, for review with quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan.

Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The

Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels.

Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search. No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, and 0.455. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes

quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no

scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel

programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state,

and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central

time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

HAMFEST/COMPUTERFEST CALENDAR 1999 - NORTHERN ILLINOIS
last updated February 22, 1999 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, Tom Harker, and ARRL for providing some of the information.

MARCH 1999

Mar 7 (Sun), Wheaton, IL - Giant Computer show (see below). Dupage County Fairgrounds.

Mar 7 (Sun) - Waukesha, WI. SEWFARS Swapfest. Info: Mary J. Adams, KB9IFF, tel. 414-358-1003. E-mail: mjadams@execpc.com.

March 14 (Sun): Sterling-Rock Falls ARS, Sterling, IL info: Lloyd Sherman, KB9APW, PO Box 521, Sterling, IL 61081-0521. tel. 815-336-2434, E-mail: lsherman@essexl.com

March 28 (Sun): Grayslake, IL - LAMARS hamfest, Lake County fairgrounds. All indoors. Admission $6 at gate, free parking. Setup at 6 AM, doors open at 8 AM. Info: tel. 847-272-8347. See http://www.lightwriters.com/nsrc/lamarsfest.htm (Small fest, but usually interesting - AJ9S.)

APRIL 1999

April 11 (Sun): Middleton, WI. Madison Area Repeater Association. 8 AM - 1 PM Middleton Conference Center, 1313 John Q. Hammons Drive Middleton, WI 53562. The Middleton Conference Center is located in Middleton, WI, near the west side of Madison, WI. From the intersection of Interstate 90 and Highways 12 and 18 near Madison's South-East corner, take Highway 12 West. Stay on Highway 12 until you reach Greenway Blvd. Exit to Greenway Blvd. and turn left. Then turn left on John Q. Hammons Drive. The Conference Center is attached to the Marriot which is clearly visible from the intersection of Highway 12 and Greenway Blvd. Talk-in Frequency: 147.75/.15. Info: Paul Toussaint, N9VWH, MARA President, prt@execpc.com. The MARA telephone voice mail (608)245-8890 . http://skywarn.ssec.wisc.edu/mara/swapfest

Apr 17 (Sat), Wheaton, IL - Giant Computer show (see below). Dupage County Fairgrounds.

Apr 18 (Sun), Orland Park, IL Giant Computer Show & Sale (see below). orland Park Civic Center.

April 25 (Sun): Galva, IL. Area Amateur Radio Operators Hamfest. When: 8 am until 2pm, April 25, 1999. Where: The National Guard Armory Tickets: Advance tickets $5 double stubs, at the door $5 single stub, No advance sales after March 25th. Outside flea market space available. Electricity, available on a first come first serve basis. Bring your own extension cords. VE Testing will be available by appointment only. Talk in 145.4900 - 88.5 PL / 146.460 simplex. Breakfast and Lunch will be available and served by the National Guard Relief Members. For set up times, advance ticket sales or other information, contact: (1) Bill Anderson WB9TEW, 103 SE 2nd Ave. Galva, Illinois 61434-1854. tel. 309-932-3023, bill@inw.net. (2) Tom Davis N9OSP, 802 Rose Street, Kewanee, Illinois 61443. Tdn9osp@cin.net

April ?? (Sun): Stickney, IL. Dupage Amateur Radio Club, Hawthorne Race Course. Hours 8 AM - 2 PM. Setup 6 AM.

AUGUST 1999

Aug 7 (Sat) - Quincy, IL. Western Illinois Amateur Radio | Club Ham Radio and Computer SWAPFEST 1999. 8:00AM to | 2:00PM. The Eagles Alps Grounds (3737 North 5th Street) 4.5 | miles north of downtown Quincy with easy access from US | Highway 24. Admission $3.00 at the Gate ($2.50 in advance) | per person, under 12 - Free. ARRL VEC testing for all | license classes at 12:30PM. Indoor Flea Market space avail- | able for $5.00 which includes one 5' table. Outdoor tail- | gating space - Free. Talk-in on 147.63/147.03 MHz. Plenty | of convenient parking available. Lunch will be served on | the grounds. Children's playground area. For additional | information contact N9JF, jfunk@adams.net |

Aug 29 (Sun), Woodstock, IL. Tri-County Radio Group. McHenry County fairgrounds. Talk-in: 146.52 Simplex. info: Bob Grosse, N9KXG, PO Box 3107, Skokie, IL 60077-6107 E-mail: tcrg@hotmail.com, http://quality-enterprises.com/tcrg/. Tickets: Advance With Double Stub $4.00 - At Gate $5.00 Single Stub - $6.00 With Double Stub . Exhibit Building: 8:00 A.M. - 3:00 P.M. Table Rental: $14.00 For 8' Table. Flea Market: 6:00 A.M. - 3:00 P.M. No Additional Charge For Flea Market Space Info (708) 944-0500. Fax (847) 658-1678. (fairly good, small to mid sized ham-fest - AJ9S).

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held on designated Saturdays from 9:30 AM to 3:00 PM. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, and anything else in the domain of computers! Lake County Fairgrounds, Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall Building #1=9720,000 sq. feet of everything Computer! For a show map, exhibitor info, and discount coupon, visit the web site at http://www.ccxpo.com.

The NRL Scanning page is officially out of summer hibernation.

Take a radio scanner along to the game and enjoy it on a different
level. Listen to:
* the coaches give instructions to onfield players via trainers;
* the officials including the ref and touchies;
* the broadcasters (various mixes of pre-boradcast transmissions);
* ground security.

The NRL Scanning Page is located at
www.ozemail.com.au/~stevenz/nrlscan.htm

"Because your balls have ears !!!"

The best answer to an unheard question is: "about four" !!!

> why does it happen and can I use this principle to transmit?
>
From my understanding a radio receiver has oscillators that mix with
incoming frequencies, these combine to make the original frequences and
two new ones, the sums and differences. These new new fequencies are
selected by passing them through filters and IF cans to select only one
of them. If this is done correctly and two or three times the radio can
be more precise on recieving a wanted frequency without images and
harmoncs. The local oscilators are in effect RF generators of a small
magnitude and can be recieved by other receivers and are, for the most
part considered RF interference or RFI. Computers, televisions,
generators, touch lamps, ect. all make RFI. FCC rules und part 95 that
these emissions should be keep low but sensitive receivers can "hear"
them.
These emissions can be used to an advantage! If you tune a second
reciever next toanother you can hetrodyne the first receiver's IF
oscilator on the second and it is possible to BFO SSB signals. i also
think that in England the RF police used this to "sniff" out radio and
television receivers for tax purposes!!
And you can use an AM radio to make a transmiter!

> Is there any real-time SSB decoding software for soundcard available on

A couple questions to help narrow things down:
1. Are you looking for a handheld or base?
2. Do you know if any of the services you're interested in monitoring are trunked?

Stop by Rich Well's site at http://www.strongsignals.net/ - you'll find useful information on whats out there and how to choose.

I've got the Opto TechToyz decoder, works great - as long as you don't mind shelling out $100 for one.
Check it out at http://www.optoelectronics.com/microdtmfpage.htm

I think Tech America sells a couple kits for this too, or plans for one shouldn't be hard to find. You might also try searching Amateur Radio websites for software to do it though a soundblaster card.

I would like to get a Yupitero MVT 9000.

But since I live in LA and would also like to pick up Police fire and the like, I am also considering being practical and getting a trunking scanner, namely the Uniden BC 895XLT.

Does anyone know how soon trunking will come to LA.

Thanks

Message-ID: <36D8DA8E.21B5BAB5@interlog.com>
Source record: 126278

I would not recommend combining two antennas into one coax, what you should do is aquire a all-band antenna (discone?). I tried this experiment years ago and it does not work well.

If you want to listen to stuff in the 150mhz and lets say 450 mhz band, try a dual band antenna or again an all-band antenna.

A CB antenna will not work well as a scanner antenna unless you are scanning freq's in the 27 mhz band...simple as that.

This is useless. Most equipment wouldn't fall in any category as alot of the use gear for sale is 5+ years old........

And most manufacture warranties don't excedd one year and may not be transferable.......

Not sure on the cost yet as the radios as not available in Canada yet and
the company who imports them does not have a price list on them yet.

2795. So.Calif Mall Security funny transmissions

Newsgroup: rec.radio.scanner
Date: 1999-02-27 00:00:00 UTC
From: redog31@aol.com
Message-ID: <19990226192234.11129.00000632@ng-cb1.aol.com>
Source record: 126292

Hey everyone,

I've got to share this story with you. I enjoy listening to local Loss Prevention Departments (undercover store security), maybe because that has been a profession of mine or maybe because it is real drama. No matter what the reason is, it can produce some funny transmissions to say the least. Along with monitoring the LP frequencies, it is also important to listen to the mall security frequencies for those time that uniformed gaurds assistance is requested. The other night I was listening to the Northridge Fashion Center Mall Security (464.775MHz) and heard a "smartass" dispatcher that made my night. The camera room officer noticed a group of 925 subjects near a loading dock and requested the dispatcher to send a mobile unit to check it out. The dispatcher advised that he would send a unit in 3 to 5 minutes. Another unit took it upon himself to investigate the actions of the subjects. Wouldn't you guess it, the dispatcher didn't take kindly to this. He told the unit that the next time something like this happens, to ignore it and don't worry about it because it's not his problem. Both the dispatcher and officer went back and forth on the issue. While driving in the parking lot, I saw the 925 subjects that caused all of this. I wasn't the only one who saw them. An LAPD Devonshire patrol unit also took notice and made a "Ped Stop" on them. I guess that dispatcher ought to pay closer attention to strange looking people.

Now you say to yourself, "why did this guy just post this msg?" The hell if I know why I did. I just did. Hehehehehe :-) Happy monitoring.

Hi! The trunked frequencies (as opposed to trunked id's) are stored just as conventional frequencies. (HINT-Always be sure you're in the TRUNKED mode when programming trunked freqs.-otherwise, it won't seek the control channel and won't scan). So, the freqs. take up one of the 1 - 0 banks on the front of the scanner. Since each bank only lets you hold 50 talk-group id's-probably a good idea to program the same freqs. into at least 2 of the banks. Yes, you may wish to "lock out" the trunked banks to speed up the scanning speed of conventional freqs.
Hope I answered your question - please e-mail me with any questions.

The XTS3000 is Motorola's 2nd generation Digital Radio. It replaces the Astro Saber. There is no commericial scanner out there that can decode the Astro/APCO25 digital bitstream.

Yes you can pickup/decode the APCO25 bitstream. The signal is QPSK 4-level FM modulation. It is not very complex once you know the structure of the bits.

Yes there is secure capability in Astro/APCO25, it is DES/OFB. OFB stands for Output Feedback, it was necessary to NOT use DES/XL since Motorola controls the patent rights to this extension (good going APCO...). The extensions (OFB) provides improved ability to resynchronize to the cypher text bitstream under faded conditions.

It may be possible in the very near future to hook up your scanner to a 4-level QPSK decoder board. Interface this board to your PC, and see the information content of the bitstream. Also possible is the ability to playback the IMBE vocoded audio on a Windows IMBE PC Sound Codec.

Your Astro Trunking System still uses a Analog Trunking Control Channel, thus the Trunking Tracker sees the Control Channel data for the Astro channel.

Only the Voice Channel is Astro (Digital) in your system. Over by me in Michigan the Control Channel is Digital. Eventually all the Astro Trunking Systems will switch over to digital control channels.

Dont worry the Digital Control Channels basically contain the same info in the Analog Trunking Systems. Seems like all Motorola did was to wrap their old 3600bps trunking signalling into multiblock 1/2 and 1/3 rate trellis coded data blocks. While doing this they told the customer its DIGITAL, sure its DIGITAL but they really didnt add anything new (they just wanted more $$$ by saying its now ALL digital...).

Why?
Bandercom has better prices and delivered when i ordered from them.
I have yet to order from Javiation, but i may be close and Jonathan is

friendly.
I think they're both good companies.
The only reason why i'm afraid to order from Javiation is because they
won't guarantee delivery.
Bandercom doesn't have the radio i want to buy or i'd order it from
them.

What you need then is the service manual of both the 2004 and the 2006
so you can same prescaler, same PLL chip. Maybe a little change in the
wiring order...but its been done.

Ive gotten several e-mails over the few years that Ive been in this
hobby. I just thought that I would try a new approach and try to make
things a bit understanding for some....everything is off the top of
the head so don't crucify me for trying.

Wig

>If I get / install the OptoScan board in my computer what will happen?

board?

OK, sorry for the delay. I will try to get the questions answered now.

Do I just let the Scanner "Scan" its entire range (1000 Channels) and
the Optoscan will Log in all"Hits"?

Nope...sure don't. The OS535 board does not use any of the
Pro-2042/2035's channels or memory. I know that it is a bit difficult
to exactly explain everything but hopefully I can try to make a
relation to standard items that would allow a better grasp on the
concept. We will attempt to explain things with the cable TV concept.

You have a cable, cable box and a TV:
-----cable----cable box----TV-----
Seems pretty simple so far doesn't it? If you have it hooked
up in a similar way that I do, then the cable comes to the cable box,
then to the TV. The cablefeed into the house would be thought of as
the memory of the scanner, the cable box (and you on the couch with
the remote) as the CPU of the scanner and TV as the Linear/RF section
of the scanner.
When you turn this setup on, you start flipping through the
channels trying to find something good to watch. You have all these
channels but sometimes there isn't much on that you really want to
watch. Say you have 50 channels on your cable which would be like 50
channels on your scanner. Every time that you push on the channel up
button on the remote control, the cable box looks to the cablefeed to
see what the next channel has to offer. This is like what the CPU does
with the scanner. It doesn't find anything too interesting so it looks
to the memory chips to get the next channel and the frequency
information. You keep flipping through the channels and then you find

Jerry Springer on channel 38 and you lay the remote control down. This is like finding a active channel on the scanner. It stops and waits until it no longer is interesting....or is active. The cable box then sends this information to the TV so you can enjoy it. When Jerry is over, you start scanning through the channels some more. The cable box (CPU) looks at what is available on the cablefeed and tunes the TV into that channel/frequency/etc.
Now after a while you get a little bored with this setup. You want to be able to have the ability to do a bit more. You hear that there are things called video tapes that you can watch shows whenever you want. Now instead of 50 channels of cable, you have the ability to watch over 10,000 videos. You have to put this VCR inbetween the cable box and the TV. The OS535 is like the VCR. It goes between the CPU/Logic board of the scanner and the RF/Linear board of the scanner. Now if you don't have the VCR(OS535) active, then it is just business as usual. You can watch your normal cable. When the OS535 is not active, it allows the CPU to tell the RF/Linear board what is going to be viewed. Now you have the option of making the OS535 active. Once you push in a tape the VCR totally ignores what the cable feed and the cable box has to offer....you can actually just unhook it for all that matters. The VCR (OS535) now is able to provide its own programming to the TV (RF/Linear board). Your computer is now turned into a neighborhood kid that is desperately out to please you and will quickly run to the video store next door to get the next video. There are also several types of video stores that you can get your tapes from Blockbuster, Hollywood Video, etc....think of these as your various software programs. Some video stores are just more to your liking so you tend to use them more often than the others. Your local Blockbuster Video Store has a lot more movies than what your cable system has. You put a tape in and find that you don't want it....the neighborhood kid takes the tape back, gets another one and brings it to you until you find something interesting. Now when you are running the OS535 under a program such as Probe, etc., there are a few more things that you can find out about that frequency. It can pull up the information about the frequency such as the typical agency that uses that frequency, the CTCSS tones, DTMF tones, signal strength and duration along with other items. That extra information is like picking up the video box and looking to see what movie that you are watching, the actors/actresses, the running time, etc.
Getting extra info on scanner without the active OS535 is taking a look at the frequency, picking up the Police Call and looking up the freqency. Its similar to seeing what channel the cablebox is on, looking at the time and having to pick up the TV Guide.
Now sometimes you are able to watch stuff on video tapes that just isn't out there on cable television.....yes, we are talking about the adult movies or cellular frequencies. Now there are three versions of the OS535. One is blocked, one is unblocked and one can be unblocked via a code. All versions are due to programming the the main IC on the OS535. Just because the cablebox will not allow you to watch the dirty flicks because those channels are scrambled, you can

sometimes find a video store (computer program) that will allow you to watch those shows. You might find a store that doesn't have those videos (blocked version), or you have to have a special membership card (code restorable version) or you might find a place that doesn't really care to begin with (unblocked version).
All kidding aside, the OS535 will allow the computer to tell the scanner what frequency to tune to. The computer recieves data back as to certain tones that may be present, the signal strength, etc. It shows this data and data combined from the frequency files back up on the screen. I keeps of all this activity similar to what the video store does when you check out the videos....yes, they KNOW you rented that TELETUBBIE video and you have no kids! If the OS535 is not active, then it goes back to the regularly scheduled programming. No matter what the video store has to offer, it isn't going to effect what comes over the cable system and you will find that that is also similar to the OS535. The OS535 cannot program any of the channels/frequency into the scanner itself but there is the PROgramit interface that can handle that. It can only take frequencies supplied by the computer. Probe allows 4,000 files each with 99 banks of 1,000 channels. Each file has 99,000 channel possibilities. It is very flexible and very powerful. You also have the ability to get the CI-V protocal to make your own programs...kinda like making your own video tapes (i.e. "The Ex-wife and Mailman Get Exposed with Hidden Video", ($19.95 + $4.95s/h...no CODs)).
Hopefully that has gotten you educated more than confused. Now on to the next question.

What alterations will be needed to the scanner in order to connect ti to the optoSan board?

You will need to take your scanner apart and nibble out a rectangular section of metal on the back panel of the scanner's chassis. You then piece everything back together and make two solder connections. One solder is to find the signal strength the other is one that connects to the NFM discriminator output. I don't actually think that the discriminator output is actually used in conjuction with the interface....but my mind isn't working just right now. There were a few places that were available for different decoding/enabling boards to be added such as a data-slicing circuit....but these were never put into use with the OS535. You then have to reconnect some other connecting cables then you are ready to put it all back together and get it up and running.

PRO-2021 Scanner
(200-0113)
Operation Faxback Doc. # 31132

Programming Frequencies

1. Select the desired channel.

2. Press [PROGRAM] to enter the programming mode.

3. Enter the desired frequency.

4. Press [ENTER].

Selecting the Channel

Step 1:

1. Press [MANUAL]. Continue pressing until the display shows
Channel 20. Press [PROGRAM].

2. Press [2][0][MANUAL]. Press [PROGRAM]. (or press [PROGRAM],
press [2][0], press [PROGRAM]).

Step 2:

Press the keys (example 162.55)

Step 3:

Press [ENTER]. To program the next frequency, move to another channel in
this way. Press [PROGRAM] to advance to the next channel. Repeat the
same steps to add more frequencies.

SKIPPING BANKS

1. Turn the power on.

2. Press the number key that corresponds to the bank to be skipped.

3. The corresponding bank number indicator disappears from the display
and the entire bank is skipped.

NOTE: To restore the banks, press the number key again.

SEARCHING WITH YOUR PRO-2021

To search for transmission, press [PROGRAM], enter limits of frequency
range, and press [up arrow] or [down arrow] to activate "search."

1. Press [PROGRAM].

2. Press [LIMIT].

3. Enter the lower limit of frequency range to be searched.

4. Press [ENTER].

5. Press [LIMIT].

6. Enter the upper limit of frequency range to be searched.

7. Press [ENTER].

Activate "search" by pressing [up arrow] or [down arrow]. [Down arrow] starts search from the highest frequency and goes down. [Up arrow] moves in the opposite direction.

Press [SPEED] to accelerate or to slow down the search.

Thanks to many of you, we have sold about $5500 in equipment for Clay's
widow. However, there is LOTS more nice equipment left.

These include: 3 HF and 2 VHF transceivers, wattmeters, SWR
bridges, GR impednace bridge and oscillator, SWL receiver, Packet
TNC, Power supplies, Grid Dipper, and LOTS more. Prices are LOW.
Please take a moment to study the entire equipment list at:
http://celia.mehaffey.com/k3ix.htm

THANKS.

Unfortunately, I don't know that much about the internal workings of
this chip. It is a 87C524 Quad Flat Pack (P87C524EBB B) chip that is
manufactured by Phillips Semiconductor with the same instruction set
at the 80C51. Im not for sure about reading the code from the chips
since there are 3 program lock bits that provide different levels of
protection for the on-chip code and data. More than likely they have
locked some portions of this chip which would stop a person from
easily acquiring the necessary data.

From: Jonathan Webster <jwebs1@email.msn.com>
Message-ID: <uEtArGhY#GA.188@upnetnews05>
Source record: 126315

Just got the R2. Seems to be a great radio, except hard to program at first (especially for someone used to Unidens!). I did notice that with the stock antenna, NOAA 162mhz stations that I can receive loud and clear on my PRO-2026 with a telescoping whip, come in poorly on the R2.

My most common target is the railroad portion of vhf-hi (160-161mhz). The reception of the weather stations makes me think that the nearby RR freqs will be bad as well. Is there a rubber duck type SMA antenna of reasonable size that will help? I would rather not resort to a telescoper, that would ruin the whole small-portable idea.

Thanks,

Jon Webster

2820. Re: Motorola ASTRO Systems, Digital/Analog, and APCO-25

Newsgroup: rec.radio.scanner
Date: 1999-02-27 00:00:00 UTC
From: R Clark <rcclark@nospam.tenet.edu>
Message-ID: <7b83a6$7ti$1@mercury.hiline.net>
Source record: 126317

Oh boy....where to begin....

I have been following ASTRO for about 6 or 7 years now. I have been a member of APCO and every month I get the opportunity to read in the APCO journal more and more good stuff about ASTRO and Project 25.

Essentially Project 25 is a standard for the development of new radio technology. It is the 25th such project or standard that APCO has sponsored in its history. Some of the other projects that have come out of APCO include Project 14 which was a study in the 70's to look at aural brevity codes (e.g. ten codes). It established some guidelines for the development of aural brevity codes and included some research on how effective they were, how easily were they implemented and understood, etc... Project 18 included the development of trunking systems. This background is given to help you understand just what APCO sponsors and what the results of their work has been.

Project 25 seeks to reduce the amount of bandwidth in use by radio users. Currently a radio used by the police or whatever you have been listening to uses 25 kHz of bandwidth or space (FM modulation). Project 25 seeks to reduce this bandwidth requirement to 12.5 kHz of space then eventually 6.75 kHz of space used. This would make more radio channels available for users in the same amount of space. This lack of space has been a big problem in some of the bigger metro areas.

Several experiments have been made in an attempt to reach this standard. One was a big flop in one of the northeastern states like Vermont or New Hampshire. One of the state police agencies tried some radios using a sideband modulation format. Sideband takes significantly less band space than FM, but it sucks for fidelity and intelligibility under fringe conditions. This plan was dropped. In a later experiment Motorola came up with a format that worked reasonably and GE came up with a different one. Mot and GE fought it out for years claiming that each one was superior. This slowed down project 25 considerably. Eventually Mot won and Project 25 adopted their protocol for reducing bandwidth requirements. This is what became ASTRO. Actually, there are 2 different kind of ASTRO radios. Only one of them is Project 25 compliant. The other series of radios is proprietary to Mot.

ASTRO is a digital format. This means that the audio signal is digitized and modulated into a digital signal. It sounds sort of like opening up the squelch on your scanner. Currently there is no manufactured scanner capable of receiving and demodulating ASTRO signals. There has been somebody haunting the newsgroups anonymously that has been able to demodulate the digital handshake channel and purse the data (talk groups, etc) from the data stream. He is using a $20,000 HP signal analizer and a whole mess of

computer equipment.

When you say you have been able to lock onto some of the talk groups with your Trunk Tracker I have my doubts that it is an all digital ASTRO system that you are listening to. The control channel is probably modulated analog data which can be recovered by your Trunk Tracker. The voice channels, however, remain digital.

In any case voice decoding of ASTRO systems is pretty far off in terms of the scanner market. It is really impractical to do it at all with anything currently available as a scanner. The software source code and vocoder chips are mega expensive. Eventually if Project 25 compliant radios become more common place watch for the chip and software to be reverse engineered, or watch for cheaper versions available as demand increases.

A couple of suggestions I would make.

1. Get more complete information. Talk to the techs at the radio shop nearby. Find out what radios they are buying. Make a public records request to review their radio bids or just watch the paper when they advertise their bids. Go back through minutes of the city board meetings and review what they authorized for purchase. Find out if they are using the ASTRO line that is Project 25 compliant or the ASTRO line that is Mot proprietary.

2. Watch for future purchases by the logal government that would signal an upgrade to all digital format.

3. If you are really dying to listen to what's going on consider purchasing an ASTRO radio and having the local radio shop program it with the talk groups on transmit inhibit.

4. If you have a lot of money - buy an IFR or some other kind of service monitor and get the ASTRO modules for it (are they available yet?).

One last thing to think about - NEXTEL. Because Mot and GE fought it out so long over their competing standards Project 25 has been terribly delayed and has not really been put to the production levels everyone anticipated. As a result competing technologies (i.e. NEXTEL) have really come to the fore. ASTRO will be there for a while because so many people invested in so much, but I don't foresee it being "the next generation" of radio for public safety. Maybe I am wrong about this, but I am at least thinking ahead beyond ASTRO.

Hope you find this helpful.

Does anyone have the frequency for the Odyssey located in Granada Hills, CA. They should have one security/operations freq's and several wireless mic freq's Also looking to see if the new LAPD training center in Granada Hills, CA has a frequency which they use to train on. Both are located at the intersection of Rinaldi and the 405 freeway.

Probe only works with OS456, OS535 and Opto-Com radios. It does not work
with any others.

There is no demo version of Probe. If you ask almost anyone who has used
it you will almost certainly buy it. I have had a Probe session running
on my OS456 for over 3 months straight, and have several channels with
over 12,000 hits. Runs great on my old 386/20!

Here is a list of the pre-ban (Apr 1994) scanners of which I am
aware that should be capable of cellular restoration:
PRO-2004 BC-855XLT *3 Regency 4030
PRO-2005 BC-200XLT Regency 1600
PRO-2006 BC-205XLT Icom IC-R10 *7
PRO-2022 BC-760XLT *4
PRO-2026 *2 BC-700A *3
PRO-2027 BC-890XLT *4
PRO-2030 BC-950XLT
PRO-2032 BC-2500XLT *3
PRO-34
PRO-37
PRO-39
PRO-43 *1
PRO-46 *2 *5
PRO-51 *6
PRO-23 *6
Note 1: Date of Mfg code 1A4, 2A4, xA3, xA2 (label in battery compment), or no
"A" in the serial no.
Note 2: Date of mfg code 1A4, 2A4, -A3, -A2 (label on back).
Note 3: Date of mfg code must not end in the letter "D", except for OAID. (On
BC700A some OBID work)
Note 4: Date of mfg code must not end in the letter "D".
Note 5: Units with date code of 5A4 can tune cellular in 30 kHz Steps using a
keyboard entry sequence.
Note 6: Units with date code of 6A4 (and some 7A4) can tune cellular in 30 kHz
Steps using a keyboard entry sequence. After 7A4 no mod can be done.
Note 7: The current 1998 models are (so far).
The below list are those scanners that were capable of receiving the full 800
MHz band,
without modification:
J.I.L. SX-400 AOR-950 Icom R-7100 *
Regency MX-4000 AOR-1000 Icom R-1*

I spent 2 hours evaluating every SMA antenna that Comet, Diamond and 2 other companies make. Believe it or not the overall best performer was the Comet SMA503 which has an extremely flexible little thin whip that is about 8 inches and can be twisted into a pocket without damage. It had an average of 3 to 4 S units more signal strength on signals ranging from 135 to 1000mhz. It is however absolutely deaf below 100mhz for some reason. Cost was $29.95 at AES and it is nearly indestructible, not a bad feature for such a little guy.

Hi,

I have an old 286, 12mHz PC with a 40 meg hard drive. Has anyone run Probe scanner software Version 4 or Version 3 on such a machine and if so, how well did it work? I can run it on my other PC (Pentium 166mHz) but I prefer to resurrect the 286 and dedicate it to Probe if it is feasible.

Any thoughts?

Thanks......

Jim

2847. MultiMode 1.6.4 For Macintosh Released

Newsgroup: rec.radio.scanner
Date: 1999-02-28 00:00:00 UTC
From: csmolinski@erols.com
Message-ID: <csmolinski-ya02408000R2802991702360001@news.erols.com>
Source record: 126094
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.scanner,rec.radio.shortwave

MultiMode version 1.6.4 has been released. This version supports 44 kHz audio sampling when running on an iMac or a new G3 system. These Mac models can only sample at 44 kHz. Most Slow Scan TV (SSTV) modes are now supported as well.

MultiMode is an application which allows your Macintosh to receive and transmit several different modes of non-voice communication often heard on shortwave radio. It is the only program of its kind for the Macintosh.

MultiMode allows you to decode and display morse code, RTTY, Fax, SSTV, ACARS, and many other modes on your Mac, without any extra hardware! MultiMode now also allows you to transmit in most of the modes of operation.

In the past, dedicated hardware, often costing hundreds or thousands of dollars, was necessary to demodulate and decode this transmissions. Today, you can use the processing power of your Macintosh to decode and display these modes, without any hardware.

MultiMode handles the following modes:

Morse Code (CW)
RTTY (Baudot)
ASCII
SITOR-A
SITOR-B / FEC / NAVTEX
SSTV (Slow Scan TV)
WEATHER / SATELLITE FAX
ACARS (Aircraft Communications)
WWVB Time Decode
DTMF, CCIR, XPH Tones
Audio Spectrum Display to aid in properly tuning in stations

MultiMode is shareware. The MultiMode web site URL is
http://www.blackcatsystems.com/software/multimode.html

Poor Zimmerman. He's destined to live out his years in mental anguish suffering the conspiracy kook's worst nightmare of a paradox. Every round of ammo, every Kevlar vest, every vehicle, every salary of every agent of every government agency he so despises - all have been funded in part from his taxes. Oh, the pain he suffers as he searches to understand how to cope with such a contradiction. Should he cease paying any further taxes, only to spend his remaining years in a cell? Will he continue to pay his taxes knowing he's funding those who fill him with such rage?

(Luckily, there are government social programs in place for those like him in such a mental state; free counseling and even grant money is available, just for the asking!)

Jeff WH6U

Well, for what matters, you can easily hook up to the CPU and record the output verses the CI-V input. For example, put in FE FE 80 E0 00 00 25 16 37 04 FD and read what output is sent to the PLL chips to tune it to 437.1625 MHz. You can cross reference this to the PLL and band selector chips. You then need to also see what the specs on the tone decoder chips are and be able to read these. Just reverse engineering. On the 535's that I have, you can just pop out the CPU chip, erase it and reprogram it. Don't quite know what exactly they are using on the Opticom. If it is a pop-out chip, then it could be rather simple to make a few of them. Don't ever say nothing is not possible.

However, the government is not the real villians in this, they are merely doing what they have done for the last 30 years- selling of the whole country piecemeal to the Highest bidder, regardless of propriety or Common Sense. The real villians are the Big-money Cellphone interests that can throw money around like my kids throw their dirty laundry,and buy ANYTHING or ANYONE they feel like, inside the Beltway, ethics being what they are anymore.
In light of Congresses recent "Spectrum farming" as a way of reducing the budget deficit, I will be surprised if we are not paying license fees for use of recievers here before long....for christ's sake don't tell the government they get money for this in England, we'll be hit with that too.....

THe right thng to do would be to return things to the state of affairs before 1986 and the ECPA, let the communications act of 1934 stand as it was written(It was fine before all the High-priced Lawyers paid for by Cellphone $$$ got their hands on it),and let the Cellphone people encrypt their Radio communications. With the bags of money they make from them, encryption would be a piece of cake...YES,DAMNIT!!! I SAID RADIO!!! Cellphones are radios, no matter how many times they try to tell the yuppies that can't live without them otherwise.

Electronic Stalking devices- wonder WHERE that phrase came from.....
This Politically Correct world we live in is becoming more and more distasteful to those few of us left with good common sense.....

Just my observation: The aircraft that run that route don't use extenders, and like one of the following comments; if they have it on too.
I recommend to do the speed posted. You don't get there much faster.
For example; 70 mph posted but you do 80, you will only make up just a few minutes, use more gas (a great deal more), and possibly get a speeding ticket.
and don't forget the CHP are now using radar, and it's range can be much more that 1/2 mile.

Shooter486 wrote:

If it works, fine, but perhaps the local oscillator and radiation from one
unit might interfere with the other unit. (Birdies). If you have problems
with
this, try a 3 dB splitter which will provide perhaps 20 dB isolation between
the two antennas from the rig. This will increase your noise figure by 3
dB, but should be no big deal with a scanner.
Whoooops! Pay no attention to the man posting this message. This reply
is
for 1 antenna connected to two scanners!

2880. BC-895xlt question

Newsgroup: rec.radio.scanner
Date: 1999-02-28 00:00:00 UTC
From: n8ppz73@aol.com
Message-ID: <19990228000007.05212.00001077@ng16.aol.com>
Source record: 126127

Howdy's

Just wondering if there is anyway to change the defualt mode on the BC-895xlt on VHF airband from AM to FM? Like a 138 freq.

Grego

2881. Plane to Plane freq's wanted

Newsgroup: rec.radio.scanner
Date: 1999-02-28 00:00:00 UTC
From: n8ppz73@aol.com
Message-ID: <19990228000554.05212.00001080@ng16.aol.com>
Source record: 126128

Howdy's:

Just currious if anyone had any plane to plane freq's for military. I am mainly interested in the freq's that fighters use to coordinate with each other.

I have just a few from the 178th FW Springfiled OH ANG, and the Toledo OH ANG. Some that I really would like are:

AV-8's from Cherry Point (callsign Stone or Mars)

F-15E's from Mountain home (callsign HITMAN)

F-16's from Fort Wayne, IN (Callsign Snake)

F-16's from CTS NELLIS (Callsign MIG)

The reason I am looking for these, are they are all frequent visitors to Wright Patterson AFB, and they mix it up with SABER's in the Buckeye and Brush Creek MOA's. So I really would like their plane to plane chatter freq's.

Thanks,

Grego, N8PPZ

I am looking for a 486 laptop, cheap.....
It will be used to run Probe scanner software.

Anyone have one they don't use anymore?

Prefer to pick up in the Atlanta area.

Thanks,

Jim....

Hi, Gary,

Don't get me wrong -- I appreciate your response and respect your
knowledge you display in r.r.a.e, but I could use specifics. I've
only had one other response, endorsing the 8500. I happen to like
it, too, but it's an excellent consumer grade piece of gear.

I wouldn't even know where to _look_ for W-J equipment (other than
the HF1000, which isn't what I need!) or R&S. Who do I contact?
Do you know dealers that will do single-unit sales? What models?
Given the current regulatory environment -- H. R. 514 passed the
House -- I need to move pretty quickly while such equipment is
still legal in the U. S.

Thanks again,

Eric

The Icom IC-T8AHP is a triband handie talkie covering 6m,
2m and 70cm. The radio has a DTMF keypad and a back lit LCD display, and
features extended receive with AM and Wide FM modes, 9 autodial memory
channels
(16 digit), automatic repeater shift, CTCSS tone encode/decode/scan,
DTMF squelch
& paging, 123 memory channels, multiple scanning modes, and more. The
radio is
supplied with a rechargeable NiMH battery pack, plug-in wall charger,
belt clip, wrist
strap, and a rubber duck antenna.....and extras!

More evidence that ham radio is dying:

I went in to the local bookstore today and searched their extensive selection of magazines in the racks. I notice that QST was no longer among the available titles. Curious, I asked the store manager why they were no longer carrying this particular magazine. "Nobody buys it. There used to be a few old guys who would come in and buy it...but now, we don't sell any at all."

Plenty of computer and Internet magazines in the rack, though. Plus PopComm and Monitoring Times. Ham radio is dying.

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

>Jeffrey Herman has just admitted to murder for hire

Because committing a federal capital crime can result in the death penalty, Zimmerman, too, commits "murder for hire" via payment of his federal taxes. That should cause him a few sleepless nights between now and April 15th.

>felony conspiracy to violate the Communications Act.

"Conspiracy" - the rallying cry of the nation's kooks.

>What a worthless shitbag.

Zimmerman gets so emotional about these things. It's interesting how I can evoke such anger within him without uttering a single foul word. He's as easy to control as a puppet.

Now, off to watch a beautiful Hawaiian sunset and sip a beer.

Optoelectronics sells one. And they also have the techtoyz one if you want to do it on the cheap. I haven't used either one so do some reseach. I think the Opto unit decodes DTMF (touch tones) and CTCSS and I think it also needs a discriminator output to work.

No you wouldn't. Code is hardly a barrier for anyone with enough
motivation to be a contributor to the hobby. I'm not pro-code, but I
don't buy that excuse for a second. Code is hard for me, but it didn't
keep me from getting my Extra Class ticket. Once I got it, I never
touched a keyer again. But I did it, and I'm glad I did. That
accomplishment is something nobody can take away from me, no matter what
happens to the hobby.

From: starcat@radiks.net
Message-ID: <7bbf0m$c27$1@nnrp1.dejanews.com>
Source record: 126211

There seems to exist a device which can be implanted in the left nostril. This device can read a persons thoughts and transmit them via microwave radio to a receiver(internal surveillance). It also receives barely audible transmissions designed to change a persons thoughts or make them think they are losing their mind(mental health fraud). It also receives ultrasound transmissions causing a person to feel sick or lose conscienceness. One such harrassing signal seems to be coming from the vicinity of 2413 C ST Omaha, NE USA. These signals are probably 1-300 GHZ. It would be nice to have a scanner or spectrum analyzer to trace these destructive signals...

Toronto Police are on Both.
The plan is to expand the existing trunk system to better cover the rest of
the city and slowly move all the police and fire on it.

To date 5 District is back on trunked and the rest are still conventional.

The only ones you listed that were cell capable are the Pro-39 and Pro-46.
There are many more that were in the good ole' days. See my site for a listing
if you desire.
Get em while you still can !
With H.R. 514 in the shadows what will be in our scanning future ????
Politics, paranoids and greed make strange bedfellows !

2918. H.R. 514, it will pass, but WHY ?

Newsgroup: rec.radio.scanner
Date: 1999-02-28 00:00:00 UTC
From: scanshack@aol.communicate
Message-ID: <19990228095403.05791.00001335@ng34.aol.com>
Source record: 126221

A humble opinion follows from a private party:

With H.R. 514 on its way to being passed, and oh yes I'm sure it will, as greed (cellular industry type) is the driving force behind it. Look at the history of these type bills. They always do pass even though letter writing efforts are put to the test. MONEY is the key. The type money that only the big industry cellular type companies have.
They want to give that false sense of security to their "customers".
Just remember, when it passes, if they don't appoint a million person scanner police force to break down your doors and take all your scanners, don't worry too much. They (the politic, bill passing people) have make it look good so they can justify the money they took from the cellular industry.
HEY cellular industry, if you REALLY did care about your customer, why not spend that money on revamping your system to better secure their privacy. Digital encrypted systems would probably cost you a bit more than your paying Wash DC now. I know it might also require a little more work on your part, but it would be a true way to help your customer you are SOOOO concerned about. Remember, lots of scanner owners also own cellular phones. They are your customers TOO !!!!!!! You are hurting them with this BOGUS bill.
Thanks for your time.

I am looking for specific University of Oklahoma frequencies. In particular, I am interested in the following:

Physical Plant
Huffman
Lloyd Noble

If you know of any other specific frequencies (by this, I would like to know who uses these frequencies. Please don't send me a list of frequencies licensed to the University), I would also be interested in it.

Also, if anyone knows the protocol, such as how they ID, I'd be interested in it as well.

Thanks!

Is the person who has this in his/her left nostril given directions to point
his/her nose at the receivers microwave dish so the signal may be picked up on
command at specifc time intervals ? Speaking of pick, is this transmitter
protected against "the pick" being in the nose and all ?
Maybe Icom or Uniden can invent a scanner for the right nostril. But I bet the
battery pack would be a killer.

>display.

Yes, it's a highly accurate clock source intended for fixed-location
use indoors. It wouldn't be too much more effort to package it for
portable use in a waterproof case, if that's what you need. It's
still somewhat power-hungry for portable use.

If you need a portable display, you *could* build one with a PIC
and a cheap LCD display.

But really, you're talking about two different types of timing. If you
want something to read visually to write into your logbook, or something
to set your watch by, 1-2 second accuracy is generally fine, and any
inexpensive handheld GPS will give you that. A board-level receiver
is overkill for this, as well as being less convenient and more expensive.

If you want something to give you microsecond-accurate time to set some
piece of measurement equipment to millisecond accuracy, or you're trying
to synchronize two movie cameras miles apart, or you want a reference
frequency to calibrate the timebase of your frequency counter against,
you need a receiver that has 1 PPS output.

>Since the unit is not portable, you might have problems getting or
>installing a suitable antenna. GPS receivers aren't all that great indoors,
>assuming you can get them to lock on to a satellite at all. Keep in mind
>that inexpensive antenna connectors and cable are extremely lossy at those
>high frequencies. That loss might overcome even the best amplified antenna.

You really do want an external antenna if at all possible. It's normal
to use a remote antenna with a board-level receiver. But the losses
in cables and connectors aren't as horrible as you make it sound. I've
used 50-60 feet of RG-58, plus a half-dozen BNC connector joints,
between an active antenna and a GPS receiver (in addition to the 15 feet
of cable already attached to the antenna). It worked fine.

I've also used an active antenna sitting on top of a bookshelf inside
my house. It also works OK for satellites overhead, but can't see ones
nearer the horizon. And it's worse when it rains, making the roof wet.

>The project itself is an incredible achievement, but might not be what the
>average person wants or needs.

Indeed. A handheld GPS is probably *worse* than listening to WWV, if you
have a suitable receiver and can hear it. A board-level GPS is much
better that WWV, but will cost you more than the handheld.

Dave

DAMN, I am amazed that anyone at ARRL can READ!! What
you have done, and they will kick you ass for this,
is acknowledged that someone at ARRL knows about this
and continues to let it slide. Are you THE Hans
Gooseschtepper, Hitler's Butt Buddy?

Want the tyrannical misrepresentation of ARRL over the
amateur service to end? Force them to account for not
publishing the information at the website below, which
Hans knows about by the way. Right Herr Goosey-mann?

The system I used in patrol cars here in Arizona was also an Eyewitness. The recorder and audio receiver are mounted in the cars trunk, with the antenna on the trunk lid. The mic for the system is a typical wireless mic like you'd find in an auditorium. Though I don't recall the frequencies it used (was selectable), they were all conventional wireless mic frequencies in the 170s and 180s like you find in many frequency directories and webpages. Just punch them all in and scan as you drive by an officer on a stop and, assuming he's turned it on (the audio can be turned on and off from the transmitter in the officers pocket), you'll find it.

Gingrich is only the tip of the iceberg. The real reason for
this bill is that the folks in government carelessly discuss
criminal operations on the cell-phone during the commute from
Northern Virginia and other suburbs into DC. Somehow they
think security is someone else responsibility. They don't
realize that critical phones have already been cloned, and
no laws or encryption will not save them. New laws aren't
needed, education for the turkeys who discuss sensitive
matters on the phone is what's needed.

Whereas everyone can't park on the side of the road in DC
next to a cell-site that handles these calls, it would be
an education, and it would make a big difference in the way
naive liberals vote in the next election, if only they could
listen in and discover how government really works.

Thanks for the extra info. About all I would add is that I'd consider using RG-6 instead of RG-58 or 59. I always worry more about loss than impeadance matching with receivers.

Do you know if there is a BNC connector made specifically for RG-6?

These are excellant working radios. Signals come in very clear. Can get
them new from Bandercom.

2942. F.S. GRE Super Converter II

Newsgroup: rec.radio.scanner

I have a GRE Super Converter II for sale.
The unit is new in box and has never been used.

Best for handhelds but could also be used for base receivers.

$75.00 + $5.00 includes shipping.
Sorry, no COD's. Check or M/O.

If interested, please e-mail me for more info and pics.

Thanks.

The FCC has spoken as has the FAA. You are wrong and the system you cite
(AirCell) does not operate on cellular channels.

Please point out which one of the below channels operates on the Cell
Bands. Yes, they are very close, Cell ends at 893.999 and below, Air
Cell uses 894.0055 and above. AirCell and Cellular are two different
animals.

CH. # CHANNEL BLOCK

I copied this from the link listed below (a good resource). I know it has more than you asked for, but hope it helps.

73,

Mac

In some communications, the Secret Servicecodewords are used. Bill Clinton is Eagle, Hillary is Evergreen, and Chelsea is Energy. Bush is Timberwolf, Babsie is Tranquility. Reagan is Rawhide, Nancy is Rainbow, and when Nancy used to do her errands in L.A., the expensive escort was Rainbow Trail. Carter, a
minister, is Deacon.

On 11 Feb 99 10:33:13, "Phil Kane" said the following to All:

>> And it should not be. The radio waves belong to the people, period.
PK> Urban myth. Radio waves are not tangible property.

Tangible: real or actual, rather than imaginary or visionary.
definite, not vague or elusive; no tangible grounds.

In the 1940, when the City of Chicago passed an ordinance forbidding
the reception of CPD radio, the supremes ruled that the airwaves DID
belong to the people, and could not ban listening to broadcasts.

PK> I agree 100% but the Supreme Court, the interpreter of our
PK> Constitution, has said otherwise - see below.

2949. Manual Needed - Old Sears Scanner

Newsgroup: rec.radio.scanner
Date: 1999-03-01 00:00:00 UTC
From: "Steven R. Lane" <slane@no.spam.adelphia.net>
Message-ID: <lSIC2.26572$fd1.5706@server1.news.adelphia.net>
Source record: 126052

Just picked up and old Sears-brand programmable scanner. Model on the front says
"Sears5band" and it programs via punched plastic cards. Very similar to the SBE Optiscan.

If anyone has a manual for these old scanners, or is willing to copy theirs for a nominal fee, it would be greatly appreciated. Also appreciate any info on where I might find same.

Thanks in advance,

de Steve, W3SRL

2950. KS/MO Column 03-99

Newsgroup: rec.radio.scanner
Date: 1999-03-01 00:00:00 UTC
From: andy <andyb@qni.com>
Message-ID: <36DB58EF.1805532A@qni.com>
Source record: 126053

Kansas/Missouri Column 03-99

Spring is here in Kansas. I can tell. As I walk outside, take a breath of fresh air, and lift my eyes to the sky, I see the most obvious sign of spring. My antennas. Their radials and active elements are bent and pointing in the same direction, thanks to the wind that plagues the state this time of year. There are few trees to break the wind near my place, so they take the direct force of any breeze that sees fit to approach. My scanner antennas end up looking like bizarre TV antennasï¿½little "V's" pointing to the southwest.
It is supposed to be 70 degrees today, so there is no way I'll have
time make repairs after work. If it starts to rain, or the temperature drops drastically, something will happen and there will suddenly be enough time for me to scale the tower. Come to think of it, I don't think I've ever been up on my tower unless the weather was bad.
One fine warm sunny day I decided to climb and make some adjustments on
an antenna. I put my foot on the first cross-member, and a small cloud appeared on the horizon. Another couple of steps upward and a cool north breeze whipped up. Two more steps and it clouded up and began to mist. Halfway up, the wife grabbed the kids and dragged them inside because of the lightning. As I neared the top, the ice pellets were stinging my face so bad I had to retreat to ground level, at which time it cleared off and was warm and sunny again. That's the nature of the hobby, I guess.

Last month's column had some items that were brazenly stolen from Rodger's "KC-Scanning" list. The trend will probably continue since many of the things that would have normally been exclusive to the column are now shared with KC-Scanning. It is a good thing, thoughï¿½I'm not complaining. Just remember that when you see the same stuff in both places.

1. HR-514. Is it going to kill scanning?
2. KHP stuff from Joe, and a pat-on-the-back to all of you.
3. Some more Leavenworth County FD radio numbers
4. Correction on KHP statewide simplex frequency
5. Dale offers an insight to the progress of the KS 800 system
6. Raytown MO trunked system note
7. Lees Summit MO gone trunked
8. Kansas City, KS trunked system talkgroups and radio IDs

---

1. There's been lots of hoopla over a bill in the US House of Representativesï¿½HR-514. I haven't read the text of the bill, but relied

on others to present the basics to me. Sounds like "they" want keep scanner manufacturers from making radios that will decode digital signals in many chunks of the spectrum, including public safety. The digital signals in question may be those that are not encrypted, like the APCO-25 standard, which is not "secret."
Some of my observations may be out of whack, to don't send any e-mail telling me I'm wrongï¿½there is a good chance that is the case. Regardless, my comments to follow still are relevant.
Let's assume that the bill passes the Senate, is signed by Slick Willie, and becomes law. Big deal? Maybe not! So what if you can't buy a scanner that decodes digital radio transmissions. How many of you are decoding to MDTs and pagers (decoding pagers is illegal, so I'm sure no one does that) or listening to trunked systems with scanners that are not designed to decode MDTs or pagers, or follow trunked systems? Lots of us do that with the aid of a computer and a simple interface or small black box, a regular scanner or two, and it works fine. In real life, following a trunked system with a computer and a couple of 2006s is more fun than doing the same thing with a TrunkTracker. It offers much more information and flexibility, though it lacks in the portability category.
These interfaces are cheap, and the software is often free! What a deal! I'm no technician by any stretch of imagination, but I have no doubt that someone else will design a software package for decoding digital radio transmissions. It will work with standard, run of the mill, generic scanners and a computer. It will probably be dirt cheap, and it will work great. I have seen every hurdle (with the exception of digital scrambling of analog signals like DVP) overcome by regular old' scanner/radio buffsï¿½not Uniden. Neal from Canada is primarily responsible for giving us Trunker and Etrunker, and there are untold numbers of folks who can claim fame for developing other software for MDTs and other similar technologies.
We should fight bills like HR-514, but remember that we scanner /radio geeks are known for ingenuity and cleverness. As long as we have a radio that will monitor the frequency, and a computer to process the signal, we will listen to it.
To help prove my point, here is an outstanding page for digital signal monitoring enthusiasts. A fellow named Lindsay C. Blanton maintains this page, and I refer to it regularly and recommend it to those interested in this kind of thing. Who says you need a digital capable scanner to listen to digital signals! (I stole his note from one of the news-groups on the Internet.) Read on:

"I've updated my digital signals page with lots of new information, including WAV file examples of lots of digital signals. There are also numerous examples of Radio Trunking Data Channels. Here is a list of the wav files currently available on the page:"

Motorola Newer Trunked System Control Channel
Motorola Older Trunked System Control Channel
Motorola ASTRO 9.6K Newest Trunking Control Channel
Ericsson EDACS Trunked System Control Channel

Ericsson EDACS Narrowband Trunked System
Motorola ASTRO APCO-25 IMBE Digital Audio
Motorola ASTRO VSELP Digital Audio
512 Baud POCSAG Paging
1200 Baud POCSAG Paging
2400 Baud POCSAG Paging
Motorola FLEX Paging
600 Baud Golay Paging- (Decodable)
Motorola MDC-4800 MDT Protocol- (Decodable)
Motorola RD-LAP MDT Protocol - Not Decodable
Motorola MDC-1200 Signaling Protocol (Signaling, Emergency, Status etc)
Motorola MODAT Signaling Protocol (Signaling, Emergency, Status etc) -
GE/Ericsson GE-STAR Signaling Protocol (Signaling, Emergency, Status
etc)
Motorola OTAR (Over-the-air-rekeying) Used for Fed/Mil DES rekeying of
radios.
"Also included are downloads to decode a number of these signals, and
links to lots of other decoding applications. I also updated a
considerable amount of information regarding the interfaces needed to
decode these signals. Check out the page for the latest details."

http://web2.airmail.net/lblant1/dfw/digital.htm

Thanks, Lindsay.
---
2. Joe writes in with some goodies about KHP and the towers for the
800
system. Take a look at what he had to say:
"What with all the interesting information getting sent around
lately,
I got to do something fun with it today. I showed my new maps and
freq/tower lists to a local trooper I know, to see what it matched of
his information, or if he knew of anything that would be missing. He
looked it over for a minute, and then went and made copies for himself!
It's at least as good a pile of stuff as what the KHP gives its people
for official use, particularly the list of tower locations (he couldn't
stop laughing at the level of detail). He says he'll let me know if he
finds anything missing or incorrect, but it's doubtful that either will
occur. He also hadn't heard of the 800 MHz KBI freq, but there isn't
much KBI radio traffic in this area anyway."
"As for the Troop H conversion to Salina for the midnight
dispatch, my
contact said that it works out well, because most of the dispatchers
working that shift in Salina transferred there recently from Chanute."
"Through lengthy discussion, we also figured out that there may be more
of the peculiar crossovers of radio traffic once dispatch becomes
centralized. This crossover seems to occur between towers on the same
frequency, when, occasionally, each tower can hear and interfere with
each other's traffic. Apparently, sometimes the fiber optic system
connecting dispatch to the towers will broadcast on more than one tower
by accident/mechanical glitch. The result is that sometimes you can

hear dispatchers clear on the other side of the same troop. But once all the state's towers are interconnected, who knows what far away towers we might be able to listen to?"
There you go, fellow scanner nuts. We must be doing something right if we can impress the actual users of the system. Keep up the good work, gang. Thanks, Joe, for the note.
Speaking of maps, how's the 800 MHz tower site map project coming along? I must admit I have been neglecting the project lately. Just not enough time in the day. Keep searching/monitoring and send in the results of your labors.
---
3. Bob sent a few more radio numbers for the township FD in Leavenworth County.

7xx Fairmont twp. (Bashor)
17xx Stranger twp.
21xx Reno twp.

He added this to the end of his e-mail, which shows that he has the true spirit of scanning:
"I suppose I could just ask some of the volunteers for the whole list, but it's more fun to psyche it out from hearing it over the air." The hunt is as much fun as listening to it.
---
4. Another note from Bob:
"A few weeks ago I posted a note saying that KHP might be using a DCS tone of 525 on their 855.9625 statewide simplex channel (shared with KDOT). This was an error. My DCS search mechanism on my Yaesu FT-50R stopped on DCS tone 565, not 525. The latter isn't even a recognized DCS tone. So if you live in an area where this frequency is used at all, you might try 565."
"Sorry 'bout the mistake. First one I've ever made. :)"

Bob
---
5. As usual, Dale is keeping us up to date on much of the "red tape" end
of the Kansas 800 MHz system. Check it out:
"There was a legislative hearing in Topeka on Tuesday 2-23-99. It was voted at that time to scrap the $18 million dollars that was set aside for the 800-system enhancement which was the trunking and the MDT's. They thought it was going to be hard enough to come up with the funds to finish the current system statewide. So for now the system will remain conventional for the foreseeable future. There is also a petition circulating by Troopers against the central dispatch system. I was in Topeka on the 21,22,23,24th and got a first hand demo of the AVL/GPS at Troop B. I thought it was a really neat tool and I wouldn't hesitate to put one in my unit. The maps were a little behind but for the most part pretty neat. I guess the main frustration among the natives is that is not reliable and has a lot of bugs to be worked out of it. Once it proves itself to be reliable I think it will be a easier pill to

swallow."
---
6. Larry came across an interesting talkgroup on the Raytown MO
trunked
system.
"Last night (2/18/99) found some good stuff on the Raytown system.
Undercover snark activity. Talk group was 200-0. They were using radio
Id's in the 200's. I'm not sure if they are Raytown snarks or not. Any
idea?"
I remember listening last year to a talkgroup on the RT system, which
consisted of similar activity. The users didn't employ radio
numbersï¿½called themselves by first name. They sounded "federal" to me,
because they used radio traffic that is consistent with the way the Feds
are known to chat while tailing someone. Darned if I can remember the
actual talkgroup though. This is the system's set-up.
854.9125 856.4125
855.1375 857.4125
855.3875 858.4125
855.7375 859.4125
855.9625 860.4125
Fleet Map: E1P6.
---
7. The good Dr. Sm0ke reveals the poop on the new Lees Summit MO
LTR
"trunked" system:

"4 channel NarrowBand LTR UHF trunked radio system so the TX'd audio
will sound a little lower than the normal UHF stations you hear. They
use Motorola M/P1225-LS radios (that's Mobiles and Portables.) the
freqs are as follows:"
453.0625
453.1625
460.3375
463.0125 (yes folks that is a legit "PP' freq)
"I have heard that they have 8 talk groups on this system . They also
have 453.1500, but it is not yet on the air...there is however a unid TX
on that freq that has some data bursts and a cw id on it. Anyone who
can id this mystery TX?? send it to me. I caught the id this morning
but I was driving and did not realize it was on that radio.....so I did
not pay attention to it to copy it...."
Does anyone know if all city services are on the system?
---
8. Trunker and TrunkTracker users in KCK take note. The first part
of
this section is a list of Kansas City, KS radio numbers for various
units. These are not talkgroups, but the actual number for the
individual radio. Obviously, this info can only be used with the
Trunker program, not with TrunkTracker radios.
The second part makes up the talkgroups I have logged so far.
The first

column is the HEX number used by Trunker. The number in the third
column is the decimal number that you need for an actual TrunkTracker
scanner.
"C-xxx" is "Car xxx" for the FD
"K-xxx" is a Trooper
"P-xxx" is "Pumper xxx"
"Q-xxx" is "Quint xxx"
"T-xxx" is "Truck xxx"
The PD units with a number after it may not be accurate,
either. The
car is not always in the same district, so the number could be
different. I ought to take the numbers out to avoid confusion.
This info is from my own research. There are surely some
errors,
duplicates, etc., as well as many omissions. I don't pretend to have
all the info. There are many more out there, so let me know what you
have and we'll add it to the list and make corrections.

Does anybody out there have a Remote Control with a Previous Channel
button. I was wondering where the two channels are put into memory--
in the Remote Control Unit, the T.V., or both?

2970. FS: Icom R-1 scanner + accesories $250

Newsgroup: rec.radio.scanner
Date: 1999-03-01 00:00:00 UTC
From: watsons@aol.com
Message-ID: <19990301002056.20400.00001711@ng-fz1.aol.com>
Source record: 126153

For Sale- nice condition Icom R-1 scanner with original box. 100 channel, continuous coverage from 100 Khz to 1300 Khz-NO GAPS. AM, FM, WFM. Selectable search steps (includes 30 Khz). $250. I will pay for UPS COD in the lower 48. Comes with following accesories.

BP-90 AA battery case, runs the R-1 off of 6 AA nicads or alkalines.
LC-59 case for R-1 with the BP-90 battery case attached- the R-1 is in nice condition but this case is a little beat up.
BC-73E wall brick battery charger, this is a 220ac charger, cannot be used in USA without a transformer (I really never used this, I ran the R-1 with AA alkalines).
Comet CH-32 "Miricle Baby" antenna, a very short (1 3/4 inch) antenna for use on 144, 430 and 900 Mhz.
Original manual and odd documents included.

The original antenna is not included.

I have used this scanner in the South Bend, IN area without any problems. It really doesn't do well in the HF range, not enough selectivity for close spaced internalional broadcast stations, but it works ok on most anything above. I have read posts on this group about intermod problems with the R-1, South Bend is not exactly a huge city and the amount of ambient RF is pretty low, I never had a problem with intermod. I used this mostly for police, weather and TV audio while driving, it picks up both VHF and UHF TV audio (WFM).

E-mail if interested.

Scott

2973. List of the rec.radio newsgroups

Newsgroup: rec.radio.scanner
Date: 1999-03-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7bdc3a$kvf@news.Hawaii.Edu>
Source record: 126156
Cross-posted to: rec.radio.info,rec.radio.swap,rec.radio.scanner

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman, WH6U
(rec.radio.amateur working-group)
```

2974. Re: Is Los Angeles trunking likely soon?

Newsgroup: rec.radio.scanner
Date: 1999-03-01 00:00:00 UTC
From: Harry Marnell <marnells@snowcrest.net>
Message-ID: <7bdkkl$3bn$1@news.snowcrest.net>
Source record: 126157

I doubt it VERY much. They spent a lot of time, money & energy to get the extra UHF TV channels (482-490 etc) opened for public safety throughout the county. It's not a particularly "coordinated" system at all, but with today's radios, if you're ANYWHERE on UHF your radio can probably cover the entire band (450-512).

Notice that almost every law agency in LA County is on UHF...almost nothing on 800, not much left on VHF high-band. With the money LAPD & LASO have sunk into their UHF systems, they'll not be leaving soon...and the other agencies will likely want to have inter-communications capabilities. They COULD have crossbanding, I suppose, but why?

LA City Fire, OTOH, is already on 800 band...with 24 channels they still got the FCC to give them a waiver from the "trunking requirement"...which is why they're on conventional repeaters and not trunked.

Brian Humphries, LAFD PIO told me some months ago that they would no doubt have to go to DIGITAL within the next ten years, as radio congestion grows and frequencies will have to get closer together. Digital signalling can use a narrower bandwidth than analog, so closer spacing can be used.

If most of your listening is gonna be in LA County, I'd get the CONVENTIONAL scanner that best suits your needs.

Harry Marnell, N6URU

: is there a different one?

: Richard

If the date code of the unit is beyond 4/94, the mod should not work.
In fact, I suspect that the jumper might not even be there.
(I'm not sure about that though-the only 2026 I've seen was made in 1992,
and of course, had L201-and clipping it did what it was expected to do.)
As for other mods, I've not heard of one...same with the 2030...same
jumper L201, but it's in a different location.

Another hardware approach is the board(fully assembled) that Motron sells.
Very well made, and it has a full display AND a serial output(and it
comes with both DOS and Windows-based logging software).
Motron's URL is http://www.motron.com
phone #(800)338-9058.
The name of the board is the ToneLogger.
I've not checked lately, but last I checked, it was $59.95 .
Not cheap, but worth considering anyway.
I have one of the above, and one of its predecessor(the TDD-8X),
and I've had great results with both of them.

Hey Jeff,
Who is this Zimmerman guy, one of you anti-American Zionist
Socialist friends? I don't fund Amerika's Wafen SS because I
don't pay taxes that I don't owe. The IRS doesn't mess with
me, I know the law. They go after cowards like you. The
evidence of your cowardice is your continued use of a
Followup To address to nowhere. You can't handle the
truth or any opposition.

Want the tyrannical misrepresentation of ARRL over the
amateur service to end? Force them to account for not publishing
the information at the website below.

Want the FCC removed from authority over the amateur service?
Contact your Senators and Congressman. Ask them to force
Henry Hyde of the Judiciary Committee to convene a hearing to
determine why FCC Chairman Kennard is not enforcing the
Communications Act against the FCC and FBI for jamming
licensed broadcasters and the Amateur Radio Service.

"Best" price in terms of cheapest or "best" price in terms of overall service provided ? Two different things in my experience. Box shifters rarely (not always) give good service or have too much care for customers.

Rich.

Do keep in mind that the serial data (NMEA) output of most or perhaps
all handheld GPS receivers is only accurate to the nearest second or two.
Yes, internally, the GPS chipset has microsecond-level time accuracy,
but driving the serial port is a low-priority task and the data coming
out of it is somewhat late. The same goes for the time displayed on
screen.

If you want more accurate time than that, get a board-level receiver
that provides a 1 PPS (one pulse per second) output. This output *is*
synchronized to UTC time with an accuracy that varies from a microsecond
or two for inexpensive boards to a few tens of nanoseconds for better
boards. TAPR sells a kit called the TAC that packages such a receiver
nicely, and they also have a program that will synchronize your PC
clock using this signal.

There is also a 1 PPS option for the Trimble Scoutmaster handheld, but
these are expensive and not common.

>Just make sure you get a 12 parallel channel model, a computer interface
>model (if you want), and don't worry about an external anetnna option, as
>the connectors and cable used quickly negate any potential improvement and
>external antenna might provide.

Actually, an active external antenna has a preamp at the antenna, which
makes up for losses in the cables and connectors and still has plenty
of gain left over. The use of an active antenna can improve performance
over the built-in antenna in marginal signal conditions, such as under
tree cover. It's also awfully handy to be able to put an antenna
outdoors when the receiver is indoors, particularly if you're using
it for timing.

Source record: 126178

Before you get too excited about the TAPR (www.tapr.org) Totally Accurate Clock (TAC) project, , just keep in mind that the $125 to $139 kit also requires an OEM board-level GPS receiver, which itself costs from $179 to $199, plus shipping. The higher price is for non-TAPR members. What you end up with is not enclosed, and thus not particularly attractive or portable, plus it has to be connected to a PC, since the board does not contain a display. Since the unit is not portable, you might have problems getting or installing a suitable antenna. GPS receivers aren't all that great indoors, assuming you can get them to lock on to a satellite at all. Keep in mind that inexpensive antenna connectors and cable are extremely lossy at those high frequencies. That loss might overcome even the best amplified antenna.

The project itself is an incredible achievement, but might not be what the average person wants or needs. In any event, check out the TAPR web site for more info.

Thanks for your message.

Source record: 126179

I have a Radio Shack Pro-43 for sale.

From what I can determine, this scanner CAN NOT be modified to receive cellular. S/N starts with "A".

The scanner is in good cosmetic condition and checks out with my Cushman Service monitor at anywhere from .15 to .25 uv 12db quieting at various frequencies (30-900 mhz).

Also included are a set of Ni-Cad batteries (no charger). I can't vouch for the condition of the batteries. The charger can be purchased at most Radio Shack stores.

Price is $175 plus shipping. Payment is accepted via Postal MO.

Respond via e-mail if interested.

The beeps are MDT tones. Motorola Data Tones are used on all of the Chgo Conventional frequencies to identify the which radio is transmitting. If you listen carefully, you only hear the burst from the portable transmissions, not the dispatch side. The Chgo radio system has no mobile radios in the regular patrol cars, the entire UHF system is HT only. CPD also operates a DVP capable trunk system, that the detectives, mayors security marine units, mounted units and others use.

Message-ID: <36DCAF42.55C306E6@urbancom.net>
Source record: 125938

This site appears to be a scanner programed with all of the 13 CPD zone frequencies. I am hearing calls from all over the city, calls that are not on the same frequency normally. The unit number will tell you what district and beat the car is from
an example is 832. This car is on beat 32 from the 8th district. even number units are supervisors 820,830 etc. any unit with a low single number 801,802 etc. is the front desk at the station of that district. Any units that start with a "lincoln" call ,i.e. lincoln 8324, are transit units and operate city wide. Lincoln comes from the slang for Chicago's rapid transit trains "the el".
You may want to check out this web site.
http://www.theramp.net/shabec/carma.htm. CARMA is the Chicago Area Radio Monitoring Association. CARMA is a well informed excellent source of info on what happening RF wise in Chicago. There is even a map of the Chicago District and radio zones on there site.

The CPD only uses 3 10 codes The most common are 10-4, acknolgement for a 2 person car, 10-99 for a 1 person car and 10-1 for officer needs help. No other 10-codes are used.

Can someone please help.....I had purchased (From RaidoShack) a copy of the service manual for my Pro-2006 about 2 years ago.....due to relocation after I got out of the militay the manual was lost. My question is this.....

Does anyone have a copy of the service manual for the Pro-2006 in ADOBE Acrobat format that I can download? I would hate to have to buy it again!

Thanks
Scott

3010. Frequency Database for US

Newsgroup: rec.radio.scanner

I have 2 Realistic Pro-2006 scanners covers 25-520 mhz and 760-1300 mhz. Some of the features of this extremely popular unit are 400 channel memory, am/fm/wfm mode selectable, direct frequency search, 10 programmable limit search banks, 2 speed scan and search, lockout, delay, lockout review, step search select, priority and sound squelch. It has jacks for an external speaker, headphones, and tape out. Clean unit's in EXCELLENT condition. Both radio's are very clean and in perfect working condition with no backlight problems. You will receive the scanner, telescopic antenna, original manual and box. The cellular modification has not been done. The serial numbers and FCC ID's of the radio's are (SN 009929 & FCC ID AA020-145) & (SN 024555 & FCC ID AA020-145). Asking $325 + shipping for each radio. If you have any questions I will be happy to answer them.

IMHO, the Yupi's only shortcoming is its less-than-stellar performance on the AM broadcast band. If you look at the sensitivity numbers, they're pretty high (which means poor) anywhere under 3.0 MHz or so. Even with a great antenna, it's never going to burn up the AM broadcast band.

However, the FM broadcast band is a different story, at least on my 7100. Its sensitivity within the 88-108 MHz band beats any portable radio I own. But the first time I tried to pick up FM broadcast stations, I noticed that they were terribly noisy and distorted, even on strong local stations. I was pretty frustrated with the radio until someone told me I that you can't listen to FM stations using the radio's regular FM mode. Instead, you must use wide FM (WFM). That solved the problem for me.

I have a Pro-43 portable scanner for sale. From what I can determine, this unit CAN NOT be modified to receive cell phone calls.

The receiver is a triple conversion and sensitivity checks out to around .15 to .25 microvolt for 12db quieting on my service monitor.

No manual or charger, however I am including nicad batteries however I cannot vouch for their condition.

Price- $175 plus shipping. Postal MO.

The PC control language for the 895 has a command that can do it, but it is
diabled on the 895 (curious, no?)

I'd say look for this to be one of the added features on the 905.

Rumors, rumors, rumors.....

Actually, if you look at the numbering scheme that uniden has given these radios, you will see a pattern:

The BC235 becomes the BC245, so the BC895 becomes......the BC905.

Furthermore, the BC905 will be just like the 895, with the added features of the 245xlt. No alpha display or anything like the 9000 series. Just an 895 with the added trunked coverage - still a great radio, I intend to get one the day they hit the market - possibly as soon as late summer of this year. Or so I've heard (heh heh, another rumor).

Odd...

Have you tried to reset the radio? (Hold Man+2+9 and turn it on) That might
fix it, but you'll of course have to reprogram all of your channels.

If resetting it won't work I'd send it in for repair, or just live with no
WX search.

Shinwa SR-001

25 to 999.975 MHZ
NO GAPS!
AM/FMN/FMW
200 Channels 10 banks of 20
10 search ranges
Scan speed: 35Ch/SEC

2 antenna inputs 1-BNC 1-TYPE N
User selectable steps 5, 10,12,5, 20,25,50,100 kHZ

Triple Conversion Receive
13.5VDC

Dimensions: 7WX2HX6D

Comes with infared remote control that can control all funtions of the radio
and the original user manual.

Looks great, works great

Multi Color LED display shows FREQ, MODE, STEP,Scan Resume mode, DELAY, ANT
Signal strenth meter, Channel, and much more.

Looks like an AM/FM car stereo and could probably mount just fine in the
radio slot.

Terms:
$400 US Postal Money order or cash
Includes UPS Ground to the continental US

Not interested in trades.

I doubt there are any European scanner manufacturers at all.
Most if not all the scanner models found only in Europe (COMMTEL, Albrect
Netset etc.) are just OEM versions from the well known Japanese
scanner manufacturers like Uniden.

>> For example, surely there must be a European movement
>> to decode TETRA digital ?

The problem is, that the scanner market is driven almost only by the
demands from the American market. Since TETRA is if no interest to
the Americans I think we'll have to wait long to see anything in
this area.

I am looking to buy a secondary handheld scanner. If anyone has any ideas on what would fit the following spec's, let me know.

**New scanner
**Handheld scanner
**Around 200 ch's
**Around 9-bands
**L/O, Delay, Priority
**Good Audio
**Must be able to search varies banks at one time. My R10 could only search one bank or all of the banks, but not a combo of 3 or 4 banks.
**Beings I will most likely buy a top of the line, bells and whistles equiped scanner in the summer; I would like to spend under $200 for the one I am getting now.

Source record: 126026

John

The new Sony's include the milair band. The SP1 is about $259 and the SP1PC is about $319. As you might guess, the PC indicates computer control. These are the least expensive full-featured scanners with milair on the market right now.
The new ICOM IC-R2 is a bit cheaper, around $220, but it doesn't have a direct entry keypad.
Stepping up from the Sonys (at least in price, if not in performance) is the Uniden 3000XLT for about $350. The Alinco DJ-X10 is a bit more, around $380, and from there you'd move into the AOR 8000 and 8200 or the ICOM R10.
If you're looking for a base or table model scanner then the Uniden 9000XLT is probably the best choice for the money.
The 895XLT is popular, and offers trunk tracking in addition to covering the 225-400 range, but you can't select AM mode in the 138-144 range, and there are a lot of fighter comms down there.
There are several computer controlled receivers that include milair, but those are specialty units so I won't go into those here.
There are plenty of milair capable radios on the market, just none at RadioShack.

> I have a PRO 2005 whose panel light just died. Is this a big job to fix,
or

It's not as bad as it sounds....it takes more time to take the radio apart
than it does to replace the light. Pop the glue on the old one, unsolder 2
leads, then re-solder in the new one (no glue needed this itme), re-assemble
and you're all set.
It's part # RSU 10800050 from Radio Shack, and runs right at 30 dollars
(ouch!). I just did 2 of the critters last week on a couple of
2006's....big difference! Good luck...
Dan

After checking out
http://members.aol.com/wwhitby2/trs.html
I've come to the conclusion that in every case it is trunked 800mhz.....Now as for the little places in between that remains to be looked into.....just stay out of Kentucky and Indiana....Both states have scanner laws that are written into the criminal code and not the vehicle code....they WILL take it away from you and not give you a receipt.....and if you're lucky let you continue on your merry way.....enjoy your trip.....

3071. MDT Monitor, Version 1.4.1, Released

Newsgroup: rec.radio.scanner
Date: 1999-03-02 00:00:00 UTC
From: mdtmon@hotmail.com
Message-ID: <7bfo4b$s66$1@nnrp1.dejanews.com>
Source record: 126070

MDT Monitor is a Windows program that allows you to monitor MDT traffic on systems that use Motorola's MDC-4800 protocol. To use this program you'll need a scanner with a discriminator output, a Windows PC (running Win95, Win98, or WinNT 4.0), and either a sound card, a HamComm-type data slicer, or an RM100 decoder.

The program (and source code) are available at
http://www.geocities.com/ResearchTriangle/Facility/7646/index.html

---

Here's what's changed since my last posting (in early February):

Added "Reverse Polarity" menu item to the Actions menu with a short-cut key of Control-P. Selecting this, or pressing Control-P will change the polarity setting for the current data source. This is useful when switching between MDT frequencies often where the polarity of one differs from another.

Added "Clear All Windows" menu item to the Edit menu. This menu item clears the contents of the Messages, Active Terminals, and MDT windows. Useful when you switch which system you're monitoring while the program is running.

Added "Emit beep through computer's speaker on match" option to the window used to define what happens when a rule match is made. It's possible this won't work for everyone, it works for me though. I think some computers may intercept the beep and send it to the sound card instead.

Added ability to specify the foreground and background colors of the alert windows opened based on rule matches. To specify the colors to be used click on the "Configure" button to the right of the "Display message in pop-up window" checkbox.

Doubled the size of the COM port buffer used when using the RM100 decoder for the reception of MDT data. This was done to decrease the chance of buffer overruns when Windows doesn't give the MDT Monitor enough attention (when other programs are starting up or are doing other things).

Added the ability to import and export rules to/from files. The "Export Rules" and "Import Rules" buttons are in the "Configure Rules" window.

When the program loads and no rules have been setup the program will add a couple of samples rules for you. The sample rules won't work for everyone but should give you a starting point. The sample rules will

display matching traffic (MDT messages and dispatches) in the Messages window (the big window at the top of the main window) if the rules happen to match traffic sent on the system you monitor. If these sample rules work for you you'll want to edit them to customize what is displayed in the Messages window.

Added a right-click menu to the Terminal Aliases window. The window contains one item: "Assign/Edit Aliases." This does the same thing as double-clicking on a terminal number. Both are used to assign an alias to a terminal number.

Added a right-click menu to the main form that can be used to hold the MDT display so you can read it. To open the right-click menu containing the "Hold MDT Display" click the right mouse button in the grey area between the top and bottom windows, betweem the left and right windows at the bottom of the main window, or on the toolbar or status bar. This was added to make it easier to hold the MDT display, now you don't have to move the mouse as far to hold the display.

Replaced the virtual device driver, slicer.vxd, with a newer version. This driver is used when using a data slicer to get MDT data.

Would be interesting to see how (or if) they would attempt to enforce this against a motorist from another state who had a permanently-mounted unit in his vehicle and was passing through. If they attempted to remove the scanner, they would then be guilty of interfering with interstate commerce.

My old and trusty
Regency Touch can
be had for the
right bid....

right now no manual

cannot find. But,
it may be in a box
and it may be found
by the time someone
determines they must
have it....

so, what will you pay
for a working Touch
100 16 channels Scanner
by old Regency?

plus shipping...it's
a pretty heavy unit.
lots of wood and metal
sourrounding it. Built
to take a licking and
keep on ticking

it never did. has scrathes
on it. but no vomit marks
or cat pee or dog shit marks.

it's clean

bill conduit
etc.

My town has finally gotten around to installing MTD's and whatever freq they are using isn't listed anywhere yet.

They've only had them for about a month now.

I've gotten MDT monitor to work for me with some well known freqs for major cities around me, but my town isn't carried on that freq.

I figure I'll search the bands up and down until I get traffic and do a trial and error deal.

My only other alternative it to buy a freq counter and follow them around. I'd prefer not to do this at all.

Disloyal to government? Of course not, no socialist
would ever do that. Disloyal to the people?
That's wear you hang yourself.

Returning the subject of this thread and
reporting some of the details at my website,
http://www.atlcom.net/~geozim/index.htm
the FCC is a criminal faction of a criminal executive branch,
engaged in a criminal coverup which is further protected by
a criminal Justice Department, also a party to the crime.

The FCC knowingly, intentional, deliberately, willfully and
purposefully supplied radio jamming equipment to the FBI and,
with reasonable assumption, to the US Air Force for the
purpose of jamming AM and FM radio broadcasters, TV
broadcasters and the Amateur Radio Service. The amateur
station jammed was defined as a Title 47, Code of Federal
Regulations, Part 97.405 Station in Distress, relaying
emergency communications critical to safety of human life.
As a result, appoximately 100 people died.

FCC is also a deliberate violator of the Freedom of
Information Act, using an exemption of documents not
allowed under the list of exempted documents types.
Whereas, I have not posted details on this to the
website yet, you can read the 36 descriptions of
FOIA requested documents in the FOIA Administrative
Appeal letter. All of these are denied on the basis
that I have figured out what the nature and content
of the documents are, and the FCC does not want to
verify my logical, analytical and deductive work
that has narrowed down the documents almost to the
point of writting them myself. Actually, I already
have two of the documents, and stand ready to
publish them, as soon as I can arrange to leave the
country, and post them from a safe place.

Neither last nor least, but in closing on FCC criminality,
FCC is a criminal co-conspirator with FBI to classify
documents pertaining to the criminal operations of the
FCC and FBI. Such classification of documents for the
purpose of avoiding criminal prosecution is specifically
described as a criminal violation in any Executive Order
pertaining to such classification at the time of

classification.

Get the FCC out of the control business, contact your
Congressman, ask that he support Henry Hyde of the House
Judiciary Committee to convene a hearing into the
criminal coverup by FCC Chairman Kennard of the
criminal operations of the FCC and FBI and US Air
Force engaged in Communications Act violations.

Get the American Radio Relay League out of its
tyrannical misrepresentation of the amateur community.
Publish the fact that the ARRL board voted not to
reveal the criminal operations of the FCC and FBI.
What decent person would be a member of such
a criminal organization. If you are in the ARRL,
moral integrity demands you quit.

I have looked at the chart on your site and viewed your reviews section. You do show the specs (ie: L/O, CH's, etc.) but I am looking for a review on it. Have you or do you know of people who have used it? Does it do a good job for the price tag of $250? I love my Pro 51, but 200 channels is not enough, and the freq coverage could be better. Also, it is old and slowly reaching death. I noticed the Commtel on the Javiation page and liked what I saw. One of my main issues with scanners these days, is the way they scan. My Icom R10 would only scan 1 bank at a time or all of the banks at a time. I want something that can scan banks 2, 4, 9 for example. Does the Commtel do this? How is it's audio? That is the kind of info I am looking for. Either this summer or early next year, I will buy myself a scanner with the bells/whistles, but for now I would like a good basic scanner that can do the job. Some people suggested the BC235, which I am looking into. I don't need a TT, but it might be close to what I am looking for.

Go to:
http://www.csp-tech.com
They are selling off their frequency databases for the entire U.S.on CD
for $3.95, basically that covers S&H and postage. A great deal!

It would help if we knew the city in which you lived. Of course you can scan the air band 108 to 140MHz. Most multicom is in the 122MHz range. Also, large departments may have a tactical or dispatch channel for the Air-support division, which is in the same freq range as there radio system (ie: 150, 450, 506MHz). In the San Fernando Valley (Southern California) I listen to PD, FD, USFS, SAR, etc. on the freq's I listed below. Help this helps.

118.9500
119.9750
122.9000
123.0250
123.0500
123.0750
123.9750

Ok, i'm a little confused now. I've gotten one email saying it was great, & another saying that it basically sucked. Maybe if I explain my purpose for purchasing one, things will clear up. My base scanner I have at home is an old Bearcat, I think made in 1982. I was hoping to upgrade. I'm just a college kid who wants one in his room next year to listen to aircraft, railroads, police, the like. I don't want to spend too much cash, as I am a little tight with school & all, & the 890xlt seemed to have everything i wanted on it. I was just wondering if the scanner was "good enough". I'm not out to do major radio scanning, I just want to listen in on what is going on around me.

One more thing, does the 890 has programmable search?

3120. FS: RS Pro-2036

Newsgroup: rec.radio.scanner
Date: 1999-03-03 00:00:00 UTC
From: TVSJR@SPRYNET.COM
Message-ID: <7bi1tb$s6r$1@nnrp1.dejanews.com>
Source record: 125945
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.swap

I have three Radio Shack/Realistic PRO-2036 scanners for sale. These radios are RS duplicates of the BC890XLT.

Here's the product info from U/BC's web site.
BC890XLT - 200 Channel Continuous Band Scanner
Continuous Band Coverage :covers virtually every frequency from 29 MHz to 956 MHz

200 Channels
Weather Scan & Alert
Frequency Transfer
Automatic Sorting
Automatic Store
Optional CTCSS Tone Board
Programmable Scan Delay
Auxilliary Tape Outputs
VFO Control Knob
includes Aircraft Band
Channel Lockout
10 Priority Channels
Includes 800 MHz & Aircraft

The radios are in pristine (10/10) condition- they look brand new. They have been sitting on a shelf locked up on one channel for a while, and have not been touched, so the knobs and buttons are nice and tight, not sloppy. This radio is capable of CTCSS tone decode, however the radios don't have the optional board. You can still purchase the add-on boards.

The frequency ranges are as follows: 29-54, 108-136.975, 137-174, 216-512, 806- 823.9875, 849.0125-868.9875, 894.0125-956 MHz

I would like $200/each for the radios, or, make an offer and we'll see how it goes.
Any questions, please feel free to e-mail me. I do not regularly check these newsgroups, so PLEASE E-MAIL ME!! TVSJR@SPRYNET.COM
Thanks
Terry

For Sale- nice condition Icom R-1 scanner with original box. 100 channel, continuous coverage from 100 Khz to 1300 Khz-NO GAPS. AM, FM, WFM. Selectable search steps (includes 30 Khz). $200. I will pay for UPS COD in the lower 48. Comes with following accesories.

BP-90 AA battery case, runs the R-1 off of 6 AA nicads or alkalines.
LC-59 case for R-1 with the BP-90 battery case attached- the R-1 is in nice condition but this case is a little beat up.
BC-73E wall brick battery charger, this is a 220ac charger, cannot be used in USA without a transformer (I really never used this, I ran the R-1 with AA alkalines).
Comet CH-32 "Miricle Baby" antenna, a very short (1 3/4 inch) antenna for use on 144, 430 and 900 Mhz.
Original manual and odd documents included.

The original antenna is not included.

I have used this scanner in the South Bend, IN area without any problems. It really doesn't do well in the HF range, not enough selectivity for close spaced internalional broadcast stations, but it works ok on most anything above. I have read posts on this group about intermod problems with the R-1, South Bend is not exactly a huge city and the amount of ambient RF is pretty low, I never had a problem with intermod. I used this mostly for police, weather and TV audio while driving, it picks up both VHF and UHF TV audio (WFM).

E-mail if interested.

Greetings, all...

I'd like to include some state-specific info to go into my
last letter -- my letter to Max Cleland of Georgia. Can any
Georgians give me info where ham groups (ARES, SKYWARN) or
CB groups (REACT) or other volunteer groups who would have
scanners helped out in a local emergency? I try to give the
letters a little "local flavor."

It's too late for me, but if you have any other information
with respect to "scanner bearers" in the states of

Montana
Alaska
Washington (state and D.C.)
Mississippi
Missouri
Texas
South Carolina
Hawaii
Massachusetts
Louisiana
West Virginia
North Dakota
Oregon
Michigan
Tennessee
Kansas
Georgia (as above)

have helped out, I can put another web page out there for
some personalization of the letters!

Thanks much,

Eric

I was looking at the varies scanners out there, other then the standard American companies (ie: Icom, Yaesu, Uniden, etc.). The Commtel line of scanners, made by Altai, seems to be something I might look into. The only problem I have is that there is no info on the net about them. Other then the fact that they are a cross between Uniden and Radio Shack, I haven't a clue as to there quality. I want something that is similar to the Pro 51, but with more depth. The Commtel 216 seems to be close to what I am looking for. It has 400 channels, 25-1300MHz with no gaps, programmable modes of AM, NFM & WFM, and search speeds of 100 channels/second (normal mode), and 300 channels/second ("Jet" turbo mode). Also, the Commtel 510 looks to be a nice little scanner that is similar to the Icom R2. If you have any information on these scanners, reviews, thoughts, or know of places that sell them; please email me. I have listed the links to both the Commtel 216 and Commtel 510 pages, which are on Javiation.

http://www.javiation.co.uk/com216.html

Before, someone gets the wrong idea, let me correct myself. When I say "American" I mean sold here, not made here. With that said, I am still looking for info on the Commtel 216 and 510. To date, the Strong Signals Site and Javiation Site are the only ones with good info on these models.

Commtel 216: 400 Ch., 10 Banks, 10 Priority, L/O
Commtel 510: 400 Ch., 10 Banks, 01 Priority, L/O, VFO, Light, Meter

Disloyal to whom, George? To you? I owe you no allegiance. Disloyal to my country? I don't need to prove myself to you. I served my country in Vietnam during my military days and I'm doing so now in the Foreign Service.

Psssst, George--let me clue you in. You don't get to decide who is loyal and who isn't. Nobody put you in charge.

3141. Scanner Recorder and BC895XLT

Newsgroup: rec.radio.scanner
Date: 1999-03-03 00:00:00 UTC
From: Todd Townley <twtownley@lambtech.com>
Message-ID: <x09D2.44$kS2.155713584@dca1-nnrp1.news.digex.net>
Source record: 125966

I&#65533;m trying to get Scanner Recorder to work with my BC895XLT.

Scanner Recorder is installed on my computer and works fine using a mic plugged into the mic-input of my sound card. But I can&#65533;t get it to work with my scanner.

I have tried both mono (two-line) and stereo (three-line) leads plugged into either the line output or external speaker output of the scanner, and plugged into either the mic input or line input of the sound card, and Scanner Recorder doesn&#65533;t pick any of it up. I have also cranked up the volume, but it didn&#65533;t make any difference.

The combination of the three-line lead from the scanner external speaker jack to the sound card line in does a beautiful job of running the scanner sound through the computer sound system. But that&#65533;s as far as I get.

Any suggestions as to what to try or look for would be appreciated! Thanks.

I think you need to look around a little more. There are plenty
of dealers in Europe which carry this line and you can pick up
various info there.

> The Commtel 216 seems to be close to what I am looking for.

The COM216 is really a Uniden UBC3000XLT that uses 4 AAs instead
of the usually proprietary Uniden NiCd battery pack. There's plenty
of info on the 3000 on the net, especially at my site.

> Also, the Commtel 510 looks to be a nice little scanner
> that is similar to the Icom R2.

The COM510 is a Welz WS1000. I have info on both it and the WS2000
at my site.

The number of IF conversions has nothing to do with it!
A properly designed converter will work on any receiver that can receive
on the output frequency range of the converter.

In addition, many FRS units have voice inversion scrambling capabilities (A friend of mine has two Kenwood units and we tuned them in on the scanner to see what the scrambling sounded like - too cool...)

So, you'll want to look for a descrambler too.

>
>Don't even bother asking HOW I listened to them.

Geez....

While the above post was certainly entertaining, I would suggest searching 417 to 420 MHz in 2MHz increments for a few days. You may catch some traffic in the clear, but most will be using DES encryption. If you stop on a frequency that sounds like static, but has a strong signal, snag it anyway. They only ecrypt when necessary because the encryption hinders radio performance.

When you find one in the clear, and if your radio allows it, find the CTCSS tone they are using. DES scrambles the tone too, so if they encrypt it, you won't have to bother with locking it out - the scanner will skip right past it.

Many newer wideband scanners from Alinco, ICOM, Yupiteru, AOR, etc go that high and higher.

>Secondly digital cellular is so hevily
>encrypted that you won't be able to get voice audio.

GSM can be described as "heavily encrypted". The garden variety TDMA (IS-136) used in the US is not so at all. However none will give you voice output from an analog receiver.

>Thirdly the digital cellular system known as TDMA
>uses spread sprectrum so you won't be able to keep track
>of a single signal for more than a second.

Wrong. You're thinking of CDMA which spreads the signal over different frequencies. TDMA slices each frequency into pieces (TIME division multiple access).

Hi,
My friend and I are representatives for an alarm company in Los Angeles.

We would like to identify the victims of recent theft, burglary, etc. to provide them with a FREE alarm. Our hopes are to generate word of mouth publicity for future sales, while helping at the same time.
The big question is: when someone calls 911 and the call is dispatched to an officer, what is the frequency used?
We are looking for the actual address, etc. that are normally broadcasted.
Any ideas are appreciated
Brian

One nice thing about the "890" is that it includes the 225-400 mil-uhf band.
Hard to find in this price range. Mine is dedicated to this role with a
tuned antenna and I am very happy with the performance.

Stop by Ham Radio Outlet at 11705 SW Pacific Highway or Fox's Spy Outlet at
9103 West Barbour Blvd. They sell the Portland Frequency Directory there.
75+ page book just on the metro Portland area! Includes frequencies, radio
codes, fire station resources, trunktracker talkgroups, maps, and more...
It's about $18, but it's edited by local scanner "experts".

Dan

What are the frequency ranges for the Motorola Radius GP300? I went to the motorola site and found that this radio is not listed, but the newer model (GP350) is listed. Is this because the GP300 is an old model and is no longer being made? Also, what are the frequency ranges for the MT2000 radio?

You have determined the one and only real Achilles heel of the R2. The manual trys to discuss how to set up such a search, but no one has yet been able to interpret how it is done including me. I just put up with hitting the band that I want to search and let it rip. The darn thing has such good audio and great sensitivity that I wouldn't trade it for anything. Not to mention it's incredible small size.

XXXXX DRUDGE REPORT XXXXX 03/05/99 02:41:08 UTC XXXXX CAMERAS WATCH LOS ANGELES STREETS, SECRET UNDERGROUND BUNKER HOUSES COMMAND CENTER

Exclusive

Under L.A., ready for Y2K! Five stories below the Federal Building in downtown Los Angeles there is a secret computer command center -- a command center that has enough power, food and water to sustain 50 people for two years!

The DRUDGE REPORT has learned, the bunker, named ATSAC [Automated Traffic Signal And Control], would become a high-tech command center used to monitor any civil unrest during a Y2K breakdown!

The compound is reached by a secret elevator located on the parking level of the Federal Building.

In order to gain access to the ATSAC area you must pass through 4 bank-style vault doors.

The city's high-tech bunker has been designed to survive a San Andreas rip and a nuclear explosion.

The main area of the complex is a large space with one 180 degree semi-circular wall stretching along one half of the room.

Feeling and looking like a STAR TREK set, the lower work area has dozens of computer consoles, which will be powered by diesel fuel generators if power is cut.

The upper wall is filled with two rows of 40 large flat panel display screens -- screens that monitor views from remote controlled cameras placed throughout the Los Angeles area.

"These cameras are our eyes," one government source tells the DRUDGE REPORT.

One camera pans across the infamous Florence and Normandie intersection. One camera is mounted on the South East corner of the MTA building; another is on the North West. One camera is at the corner of Cesar Chavez and Vignes looking out on the intersection by the new city jail.

One camera placed on the roof of a 28-story building has demonstrated dramatic zoom capabilities. With the camera, you could spot a pimple on

someone's face on street level.

The DRUDGE REPORT has not been able to learn how many cameras have been placed throughout the city, but most appear to be mounted on public buildings.

The city council and the mayor would ride out a social breakdown episode inside of ATSAC, according to one emergency plan.

Suggestions that officials should be moved to the bunker before New Years Day Y2K, so far, have been met with complete resistance.

"Nobody in their right mind wants to watch the dawn of a new century from five floors below Los Angeles," laughed one well-placed City Hall source.

The bunker, built with local and federal tax revenue, is strictly off limits to the general public.

I think I can get you a Pro2026 for about $125 (plus shipping from Houston, TX). It is the 200-148 model - the first one manufactured - it is a 1992 date code - This model requires power to maintain the memory (it has pigtail leads on the back of the scanner) but it is cellular capable. Let me know if you are interested

From: beavis@e-z.net
Message-ID: <36DE5630.578B@e-z.net>
Source record: 125891

Hello,

I've been lurking in the group for some time now, I was wondering if
anyone knows where I might obtain a complete list of scanner freq's for
Portland Oregon? As in police,fire,electric companies,cable companies,
the whole bit.
And yes I have thought about that freq books that radio shack books,
I'm only interested in the Portland/GResham and maybe the clark county
area.
Thanks,

beavis

> going on around me.

Much of the confusion will come from different people
who use the radio in different RF environments. This radio
is VERY sensitive and only double conversion. As such, if
used in a heavy RF area with strong, local signals (pagers,
cell, TV, FM radio, etc), it is EASILY overloaded and will
spew image and intermod across every receive band. Not a
model I would recommend attaching an external aerial to
unless you live many miles from a city.

Also, be aware that the BC890 is VERY noisy due to internal
signal generation (birdies). This radio spews more of this
such crap than any other base station I have owned (I
currently have about 20) or probably ever will own. Uniden
has made LOTS of mods to this radio over the years to try
and control this but have only been partially successful.

> One more thing, does the 890 has programmable search?

Yes, the usual one Uniden search band.

>> did.
>
>can you help a newbie out with explaining what are tone
>decoding features?? thanx!

Sure...the older boards were capable of decoding touch tones (cordless phones) and displaying the actual digits on the screen.
In addition, many radios transmit what's known as CTCSS or PL. That is a sub-audible tone transmitted along with the regular signal. The purpose of that is so that the receiver can also be set up to only hear those transmitters using the PL tone, and filter out any transmitters NOT using it. Many police departments and other services now use repeater systems, and a PL tone is required to be able to access the repeater. So an entire department's radios are set up to use a certain tone, and all are able to talk to one another without the possibility of hearing someone else using the same frequency. Ham radio operators do the same thing with UHF and VHF repeaters. This mainly helps to prevent outside interference to a repeater system. The 456 board is also capable of displaying these tones in addition to touch tones. I suppose the tone decoding would be useful for a number of purposes depending on your intent. Many people using cordless phones conduct bank by phone transactions, call phone-sex numbers requiring passwords, etc....you get the picture.
Since the tone decoding chip used on the opto board was discontinued by the manufacturer, the original 456 is no longer being offered, but the 456-lite is still being sold by Optoelectronics and does everything the original board did, less the tones.

I guess you didn't pick up on my hints last posting.
COM216 = BC3000XLT
COM510 = WS1000
I have reviews of the BC3000XLT and WS1000 on my site.
Clear?

> R10 would only scan 1 bank at a time or all of the banks at a time. I want
> something that can scan banks 2, 4, 9 for example.

This is a limitation of iCOM radios (1 or all banks). Most
models allow all banks to be scanned simultaneously. There
are a few older Yupiteru models that only allow up to four
banks at once. Commtel radios are made by GRE, Uniden and
Welz and as such, do not have these limitations.

>
I found the problem.

While the output jack on the scanner is mono, the mic-input jack on the sound card is stereo. However, the mic feed is only using one side of the stereo line.

With the lead pushed all the way into the mic input, the scanner signal was not feeding the input the sound card was looking at. By pulling the jack out of the mic input slightly (1/16 inch), contact is made where the signal is expected, and everything works fine.

Thanks to all who responded!

You have got to be kidding! But just in case you're not a troll, I'll give you this advice. Go to your nearest RadioShack store and buy a copy of PoliceCall Plus. This is a frequency directory book with listings for all the police departments in Florida and much, much more.

While programing the "delay/." key is used for the decimal. Look close, you may see it on the key pad. All other times this key will act as the delay (on/off) function. Or maybe the pad is worn and you can't see it?

Thanks for your reaction! It does that too a bit, but that's easely solved with a tiny bit of foam.....or whatever they call that stuff on the inside of the holder. The foam that is already in there has lost its flexibility due to storage.

I found the problem to be the contacts inside the phone jack. The rattling is pretty hard to hear. If I plug in the ear phone that comes with it, it's gone. No biggy. :)

Hi! Thanks for your reaction! It's not the battery pack. I found out that it's the contacts inside the phone plug. The rattling noise is pretty hard to hear, but it's gone when the ear phone that comes with it is plugged in.

The battery pack also makes some noise, but that's beacause the foam on the inside of the lid has worn out a bit due to storage. I guess that can be fixed by putting in a little piece of foam.

Again, thanks for your help!

The new 2066 trunktracker is about the same size, and has some great features (besides trunking) that makes it even better than the 2026. It has CB search, service search, weather, and best of all triple conversion (no more intermod problems - yay!). If it had PC control too, it'd be perfect in my opinion.

If it is hillsborough county I would imagine they use there regular police freq. I am sure though that they would have to get clearance on a seperate channel through the FAA on a aircraft freq. As far as the news copters I would think in the 450MHZ range since most TV stations broadcast in that range on mobiles to trucks etc. If you find out anymore info let me know, I would be intrested as well.

My 235XLT had a piece of plastic inside it. I managed to shake it out
through one of the openings
inside the battery compartment. It looked like a hole cover of some
sort, but it didn't fit
any of the holes. It was a small, rectangular piece with small side
tabs.

Scott

> to decode TETRA digital ?
A bloke from one of the companys that developed TETRA
gave a lecture to the local Institute of electrical engineers
group reccently. I don't have the papers to hand.

TETRA does all sorts of funky stuff. Users can can transmitt to each
other direct from radio to radio, via repeaters or from
one end of the country to the other cellular style.

Dispatchers can monitors calls between there users and can
block or disconnect calls.

When asked about monitoring he said something like "The idea
you could buy a scanner from Tandy and listen to Tetra is
rediculus, those days are gone." Tetra uses a "high quality"
speech codec, claimed to be better than GSM quality with
lower bitrate. The data is also encrypted as well as encoded.
Different encrypting algorithms have been developed for different
end user markets, millitary users getting the best encryption.

Let's say you've got an old calculator hanging around doing nothing but taking up space. If that's the case, why don't you unload the poor thing on me -- and you'll have a wee bit more $$$ to toss at whatever else you might want. I'm mostly looking for the older LED-type handheld calcs from the 70s or so, the ones with the blackish screens, often with glowing red numbers, as opposed to those you see most often today, with their typically grayish screens. I'm looking for all makes, all models, including (but not at all limited to) those from Hewlett-Packard (HP), Texas Instruments, Casio, Sears, Adler, Wards, Olivetti, Canon, Bowman, etc, etc. The thing may seem crummy to you, but to me it may not.
Plus, if you've got the old manuals, cases, chargers, so much the better. Just drop me an email (floete@aol.com), maybe we can work something out, because these things fascinate me! Thanks much, Erik

Thanks Rich. You've got a great web site, by far the best I've seen.
By the way, thanks for putting together that list of scanner specs and
including it in your pages. I printed it out and have been pouring over
it. I plan on using it as my new shopping bible as I add to my collection.
I noticed something strange in regards to the Icom R-1. You list it as
being able to receive from 500khz up to 1856 mhz. I have seen other web
sites that also list this specification for the R-1 while some say
100khz up to 1300mhz. Well, I bought the R-1 I was looking at this afternoon
and the manual clearly states that my R-1 will only range from 100khz up to
1300mhz. Are there different versions of the R-1? Is the American market R-1
different than my Canadian market R-1?

Sal
I have seen no indication that there were

I could be wrong, but I do not think it is legal to use the personal information sent out over the air for the purposes of increasing business for your alarm company. Also, doing this could give our hobby a bad name, as well as generate support for those who would seek to place more restrictions on our hobby. Also, there is no one frequency that does this in L.A., it goes over the regular dispatch channels, as well as the hotshot channel. Don't be an asshole -- earn an honest dollar, and don't abuse our public safety radio system for profit. Advertise like everyone else does, and wait for customers to come to you.

I have both. Personally, I think you would do much better with the BC235XLT. It is much easier to use, has superior scanning features (the R10 can't scan multiple banks), and is easier to program. It also is much less prone to intermod, and is about $150 cheaper, depending on where you buy it. This is not to say the R10 is a bad reciever -- it just doesn't work well as a scanner, with it's 6 channel a minute scan rate vs. the 235XLT's 100 channel a minute rate. If you have many channels to monitor, and don't want too much heartache, buy the BC235XLT, or it's superior RS clone, the Pro-90.

Can't be done. You'll need an Optocom, or TrunkTrack or one of the other
software programs to do it, or wait until summer when Bearcat is
supposed to release their
BC-245 which is rumored to trunktrack 900 MHz. Radio Shack will surely
come
along with their version of the Bearcat too.

>Where can I find the freqs used by police Helicopters?

It usually depends on the area for what frequencies they operate on. I know in Cleveland they are on the city's Motorola ASTRO trunked system, but will communicate on certain conventional frequencies like 155.3700 and 154.9350, which are used for police intercity and mutual aid. I would also listen to 123.0500 and 123.0250, these are Helicopter Air-to-Air frequencies that units will usually coordinate on and keep up with the weather and such. If you have a specific city or region, I'm sure somebody could let you know which frequency they would operate on. I would assume the helicopters would be capable of communicating on all the normal police frequencies for the city . . .

>BC895XLT trunktracker and additional hard/software ?
>Or is this Bearcat scanner only usefull for analog trunking networks ??

The BC895XLT only does Motorola analogue trunking.

Tetra is digital and will require quite another setup to decode.
In addition Tetra communication might be encrypted in which case
it will probably be impossible to decode.

>Schneier.

True, but this is the US Government we're talking about. Nobody ever accused them of being super smart...
>
>Maybe it was triple-DES...that is in pretty common use these days.

Actually it's not. Federal equipment is only designed to handle one cycle of DES encryption. Think about the people who they feel the need to hide these communications from - common robbers and thieves, mostly. They could give a damn if we listen, they just don't want their suspects to know they're being watched. Most of these suspects are not the brightest bunch, and that is the level of security the government is using. Anyone with enough money and time to decode these signals isn't going to be hauling loads of coke into the country, they'll have "mules" who do that.

>But how do you know it was DES? Any encrypted signal is going to sound like static.

Simply because it's the federal government we're talking about! It's federal law that sensitive federal communications are to be encrypted - it's also federal law that prohibits people like us from attempting to decrypt these comm's. So if someone does manage to crack the code, that's just one more charge added to the list...

Not only that, but since these comm's are digital, just by taking the first 3 bits off the front of a frame sync and sticking them on the back would serve to encrypt the signal sufficiently to prevent another radio from receiving the signal - if a digital radio receives an invalid frame synch, it can't pick the audio from the synch data, so it won't even break squelch. Someone could transmit an encrypted signal on that same frequency, and you wouldn't even know it.

Yep, Heard everything on the good old scanner on my way to work. I got on 280 and Foothill as San Mateo SO's were
hauling ass down 280 along with a few CHPs. The Sn Mateo SOs got off on Foothill Expwy and then got back on 280 as
the suspect was seen on 280. County Fire Truck 14 had seen the suspect, though i'm not sure if that was on Foothill
or 280, They said that right before I turned the scanner on. I took 280 down to Stevens Creek while on my way to
work, San Mateo SOs were hauling ass down Stevens creek from Wolfe I believe. CHP was also coming up behind me from
280 at the exit and went through the lights. I have never seen so many channels on my scanner all working the same
event. Traffic was coming across a few of the SOs freqs as well as SJPD, I didn't hear anything come across the CHP
freqs though. I couldn't find the San Mateo SOs freq so i didn't listen to them. They had that condo covered pretty
damn well, I thought for sure that he had ran and that they lost him but it turned out he was still in the condo.

Kept me enertained for a few hours at work......
-Mike

I use a fairly recent vintage Radio Shack variable voltage wall adapter. I set it to 12 volts and the Alinco works fine. This particular wall adapter has the smaller coaxial power plug that the Alinco requires. I believe it puts out about 500 ma. I use it (but at a lower voltage setting) with my Sony 7600G as well.

Is there anyone that is willing to sell their WORKING OPTO-456
board? heh.. i know this is a stupid question, but maybe someone is
willing to part with it.. I personaly was going to buy the 456 because
of its tone decoding and such, but since opto no longer makes that
version of the board.. i'm pretty well screwed.. if nothing else i guess
i will end up building another CE-232 and installing it and snagging the
RedShift software..

Thanks..
David

All this debate on most recent congressional bill to impede scanning on this newsgroup does not mention that the bill (apparently) will prohibit the future manufacturing and/or design of a digital scanner. I picked up on some hearsay that one manufacturer was working on one. I got this information by watching C-Span and the Congressman (unknown - I don't remember) was giving a compliment to involved scanner users who listen to fire and police. He then said that the bill would not impede those users, but would only prohibit devices "readily accessible" to monitor wireless personal communications and digital. This sounds like much of the future of scanning could be in jeopardy as this seems to be the wave of the distant future as frequency assignments become more and more narrow.

3298. San Jose Police chase ends in suspect's apparent suicide

Newsgroup: rec.radio.scanner
Date: 1999-03-05 00:00:00 UTC
From: bayareascan@usa.net
Message-ID: <36DF54D0.257F@usa.net>
Source record: 125817
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Just wondering if anyone in the Bay Area monitored this event this morning? I managed to tune in at the end of the chase when they had the suspect corner in the apartment complex. The San Jose PD reported that that the suspect was found with Gun, Exploded Dye Pack and a Scanner! The event took place on San Jose PD 2 - 460.325.

==========

From the San Jose Mercury News:

Police chase ends in suspect's apparent suicide

A suspect in a Redwood City bank heist shot at a San Mateo County Sheriff's deputy Thursday, led police on a chase to a San Jose apartment complex, where he apparently committed suicide after a standoff, police said.

Sgt. Derek Edwards, a San Jose police spokesman, said a shot was fired about 11:30 a.m., and police found the suspect dead a short while later.

The man, whose identity was not available, allegedly held up a Wells Fargo bank on Woodside Road. But a dye pack hidden in the money exploded, splattering the camoflauge jacket the suspect was wearing, police said.

The robber drove south on Interstate 280 but was spotted by a San Mateo County Sheriff's deputy, who gave chase. Somewhere in Palo Alto, the suspect fired a couple of shots at the officer, missing him with both, Edwards said. But the officer had an accident and broke off his pursuit.

The suspect went off 280 at the Stevens Creek Boulevard exit and hid in the Plaza condominiums. That prompted dozens of officers to surround the area and block traffic on Stevens Creek in an attempt to take the man into custody while minimizing the risk to civilians.

>

No No, setting scan edges, there are 25 of them, is not that difficult. It's just like programming a memory channel. One of the banks has channels numbers that are numbered 0a, 0b, 1a, 1b, etc on up to 24a & 24b. These are your scan edges (limits-lower and upper). After setting your edges (limits), with the R2 in VFO mode, push FUNCTION and BAND, the scan edges will show up as PROG 0 thru PROG 24. Select the edges to search with the tuning knob and push band again. The R2 should now be back in VFO mode. Push FUNCTION and an ARROW key, R2 will now search between the edges (limits). Page 17 of the manual TRYS to explain this. I have I haven't confused you more.
There is a R2 list at www.onelist.com
R2 freeware is available at,
http://www2.crosswinds.net/frankfurt/~vlaski/
Good Luck,
Greg

The Pro-2045 is a much better radio than the 890XLT. The 2045 is triple conversion and offers many of the same features as the Uniden 9000XLT. It is blazingly fast, relatively free of intemod and images (when compared to the 890, which is loaded with them) and allows you to manually select the receive mode which is important if you want to monitor military aviation in the 138-144 range.
If I couldn't have my 9000XLT a 2045 would be my second choice.

>How do I tell my R2 to start searching at 255 mhz and then loop when it
hits
>280 mhz?????
>
1)Select 255.000 manually while in VFO mode by pressing FUNC+ROTATE DIAL to
achieve 255.000
-nothing should be blinking
-to get VFO mode,press V/M and only battery and freq. should show
-be sure to press MODE to get desired AM,FM,WFM
-use the band key alone to jump bands to get near 255,use FUNC+DIAL to get
closer and finally DIAL by itself for small steps to achieve 255.000

2)Press FUNC+V/M MW no more than 1/2 second.
-MR is flashing with some other figures or numbers
-the set freq.. of 255 may disappear or change,OK.

3)Press FUNC+ROTATE DIAL counter clockwise until a number and letter
combination is seen.(example,0A,0B,1A,1B,2A,2B etc)
-the number/letter combo that will appear is the first empty one
available,most likely 0A if never used before.
-use DIAL only,see how it changes
-press FUNC+ROTATE DIAL both ways,see how it changes

4)With the proper number/letter combo flashing(0A and the letter MUST be
A)Press FUNC+V/M MW for one second.
-beep rapid beep beep

5)Set to 280.000 as in step 1)
-set desired AM,FM,WFM with MODE

6)Press FUNC+V/M MW no more than 1/2 second
-MR is flashing with number/letter
-the set freq. of 280 may disappear or change,OK.

7)With the proper number/letter combo flashing(0b and the letter MUST be
b)Press FUNC+V/M MW for one second.
-they must be paired 0A-0b,1A-1b etc,A is the start freq.. and b is the end.
-rotate DIAL to change as needed
-beep rapid beep beep

8)Press FUNC+BAND.
-ALL,BAND or PROG## will be seen

9)Rotate DIAL to PROG 0
-use PROG 1,2,3 etc if you used 1A-1b,2A-2b,3A-3b etc. instead of 0 as
above.

10)Press FUNC+volume up key.
-scans at desired range set between 0A-0b
-0P flashes or 1P,2P,3P etc.

Depends on what model you are talking about. Most of the motorola radios are available in VHF high, VHF lowband, and several UHF splits. Someone with one of these could be on virtually any frequency. Perhaps you are not asking the right question? Are you looking for a frequency for an agency or business?

Only get the 235 if you need to do trunktracking. Otherwise, if price is not important, I'd look at some other scanners. Feedback on the Icom has been less than stellar. Look into the AOR scanners, or Relm as a cheaper alternative.

Check out www.strongsignals.net for some great reviews.

Hope this helps.

Looks like a good page. I have had great luck with the simplest of all, a random longwire antenna. Simple to build, solder a connector onto some antenna wire, and cut the wire to the longest length you have room for. Started using this mostly for shortwave, but it really pulls in scanner signals well! I have been pleased enough not to mess with anything else, and I like to tinker!

Is it possible to decode Tetra (European digital Trunking network) using a
BC895XLT trunktracker and additional hard/software ?
Or is this Bearcat scanner only usefull for analog trunking networks ??

Thanks,

Geert

I'd strongly recommend that you look into the BC895XLT. Much better
receiver with more features. Computer control. S-meter. etc.
You should be able to find a new one for just over $200!

Good luck!

Strong Signals,
Rich Wells N2MCA

> different than my Canadian market R-1?

Might very well be a mistake. I'll have to wait until I get home
and check the manual. Seems I might have copied a spec from the R100
and forgot to change the 1856 to 1300.

From: Markus Buttinger <m.buttinger@salzburg.co.at>
Message-ID: <36DFD9FE.7996A4D2@salzburg.co.at>
Source record: 125835

hi from Central Europe,

I am considering to get JRC's NRD-545 receiver.
Although primarily a short wave receiver, the
optional "CHE-199 VHF-UHF Internal Converter"
card turns it into a scanner up to 2 GHz.

In case anybody on here has one of these, please
tell me your opinion on how it performs.

thanks,

Markus Buttinger
Salzburg,Austria

>propaganda?

Actually the "features" are TRUE in the sense that the customer reads what
he/she wants to read into the discription as it's printed. If the marketing
types were to put the exact technical terms on the box, a lot less
"techno-savy" people would avoid the product because they wouldn't understand
what the "features" were and the sales person qualifications would require a
"double E" just to get hired, not that that would improve the breed....

>upper left corner. That would almost make it fraudulent for them to sell the
>phone in that packaging if it were indeed analog. Are there any ways for me to
>test the phone or prove its capabilities (or lack thereof) one way or the
>other?

Well it is a 900mhz phone and one of it's capabilities is "digital"....so technically it is a 900mhz digital phone. On the other hand if it said the phone was capable of "digital communications" in the 900mhz band then I would read that in a totally different way....and it would NOT apply to the model we are talking about. As for testing the phone, I'd keep one rule in mind, if it's sensitive information then use a "land line" or a digital "CDMA" only Cellphone.

3318. FS-Icom R-1 factory Unblocked

Newsgroup: rec.radio.scanner
Date: 1999-03-06 00:00:00 UTC
From: gg210301@aol.com
Message-ID: <19990306182353.15311.00003912@ng-fv1.aol.com>
Source record: 125637

This is a very nice and tiny scanner with 100 channels. Some features include sleep timer, knob vfo, dial light.. It also has built-in lithium rechargeable batteries which will run the radio for a about two hours; these batteries are in good condition.

It was originally purchased overseas and is factory unblocked. Comes with the original manual, box, BP-90 battery pack. Its been seldom used and has been sitting in the box.

Would like to ask $300 shipped to lower 48 States. Please respond with serious offers. Thanks for reading.

The + 30 Channel Autoscan System should have been the tipoff that it's not a digital nor is it spread spectrum. The Uniden 900 mhz phone that have 4 digits in the model number appear to be the only 900mhz spread spectrum which would be damn near impossible to intercept with a scanner......

The manual also says..

The UltraClear Plus innovative technology, together with 30 different channels, virtually eliminates background noise and provides you with the best possible reception during all of your conversations.

translated this means that it uses audio compression to improve the voice quality....

To protect you against misbilled calls which might result from your phone being activated by other equipment, Random Code® digital security automatically selects one of over 65 thousand digital security codes for the Handset and Base Units. Also, the AutoSecure® feature electronically locks your phone when the Handset is in the Base.

translated this means that the digital performance is used to prevent anyone from hacking into your base unit and dialing out and letting you get the bill...

enjoy

Fred

For the life of me the damn thing won't charge with the dc adapter.
But I went to JFK airport today and grabbed a european to american
converter for 4$ which allows me to use the wall adapter that is
charging the battery now. BTW did yours come with a dry cell battery
case?

>Does it say Spread Spectrum anywhere in the advertising or docs?

Nope - I know it's not a DSS phone. I'm wondering if it's even a digital phone.

>How much did you pay for it? If it was much under $100, it's probably
>not SS. Digital can mean anything you want it to mean, including, I
>suppose, the fact that you use your digits to push the buttons on the
>dial.

Forgot what it cost, but it was closer to $200 than $100. It's a two line, dual keypad speakerphone. The way they use the word "digital" in their product description is very ambiguous.

I knew it wasn't DSS, but I was hoping it was at least digital since that's fairly secure and it's also how the phone was portrayed in the literature. Why is the Autoscan System a dead giveaway that the phone is analog 900mhz?

>The manual also says..

Hey, you've got the real scoop on the specs! Do you have the same phone, or are you an expert on phones in general? Do any of the specs in the back of the manual reveal facts about the phone that would contradict the "features" propaganda?

>To protect you against misbilled calls which might result from your phone

Hmm...."Random Codeï¿½ digital security" - is this what they use as an excuse to call the phone "digital"?! I'm looking at the original box it came in right now, and I just noticed that they did print on the box "900mhz Digital" in the upper left corner. That would almost make it fraudulent for them to sell the phone in that packaging if it were indeed analog. Are there any ways for me to test the phone or prove its capabilities (or lack thereof) one way or the other?

Rest assured, the EX965 uses wide-band digital modulation and all somebody with a scanner would hear is white noise, and then only in WFM mode. I know because I bought one and that's the first thing I checked(with a scanner). I agree their marketing language is a bit ambiguous, especially now when every cordless phone has "digital" something in their specs.

Thanks for the confirmation. It's good to hear from someone who actually has the unit and tested it with a scanner. After that stunt that Panasonic pulled with their GigaPhone, I really started to wonder how many other cordless phones weren't within the specs they advertise.

I'm actually in the market for another cordless phone aside from my Uniden, as the phone I use for an answering machine is oooooold technology - a 46/49mhz. The only reason I've kept it is because it has a speakerphone built into the handset, which comes in handy when you're on hold and want to be mobile. I think Sanyo is the only company making a cordless phone that comes with a handset speakerphone (and has DSS). At this time, they don't offer a model with a built-in answering machine too. By any chance, is there some manufacturer that does?

Like they are going to spend multi-millions developing soft & hardware
that will decode it! It is also probable that if any one does the
importation, manufacture, sale and possession of such will be made
illegal.

I have the following 2 scanners for sale

1 - Uniden Bearcat SC150 800MHz scanner, twin turbo, used but in good shape. 100

channels, no modifications done. Unit has a date code of 'OFIG' first $120 obo takes it

1 - RS Pro-2039 Base scanner. Very small and in great shape. 200 channel, 800MHz

HYPERSCAN. Broken antenna top, but functions fine and has optional BNC antenna connector on back. Unit is 120VAC ready with cord. Asking $150 obo

I have a number of mint condition Black & White CCD cameras. Follow the below link toview . They are very small encased C-mount cameras(I have some lenses for sale as well) They were purchased new for $249 each. I will sell for $150 each, or can work out a deal for qty. Let me know if interested

http://www.polarisusa.com/pi2201.htm

I have a NEW Vivitar Vivicam 3000 digital camera with 2MB flashcard installed. Comes with all manuals, software, cables, boxes and batteries. I used few days for a specific case and have no further need for it. Great camera, see specs at link below.
Asking $225 obo

The February 99 Monitoring Tomes had an interesting article on computer controlled trunk tracking, though most of it was about how to use two ordinary scanners, an interface board, and a PC to do the job. However, the references gave some great pointers to BC-895XLT sites. I checked out several, and my favorite software is FreeTracker (v2.x as opposed to beta 3.x) at www.autowinnet.com/freetrack.html. Cable info (easy to make from junkbox parts, and the radio interface IS at RS-232 level) at www.futurescanning.com/index.htm

I tried other software, such as RadioManager, had a difficult time, and didn't quite end up with what I wanted. Ditto for PC895.

While others have praised it, I never tried ScanCat, as I'm not ready to shell out $100.

I take it you have no idea what encryption means then?

This is real life not television! You can't just
press a few buttons and magically "break the codes".

This reminds me of one of my mates. I told him all
about videocrypt line cutting, hash functions and smartcard
security. He's still convinced he can somehow copy his
Sky-TV card onto a PIC-chip.

This is not a matter of "letting a market go", its a matter
of it being uneconomic and impractical.

If they sell a dozen decoders at half a million dollars each
that would be a "Multi-million dollar scanner market".

I don't have that much TETRA specific knowledge, anyone
who does feel free to jump in. Anyone know of sources of info on
protocols etc?
What follows is my take on this, some of it supposition based
on current systems.

a bit about encryption

In this context, encoding means " to transmitt a lound sound send
some one's, to transmitt a quiet sound send some zero's" or some
similar principal.
If you know the encoding scheme in use then you can recreate the sound from
the data stream.

Encryption is about making it delibertly difficult to recover the
original message.

Say there is a digtal signal going past your antenna.
Alice is sending encrypted speech to Charlie. Bob is stitting
in the middle monitoring the traffic.

Alice's radio transmitter produces a stream
of numbers representing the loudness of the the sound picked up by
its microphone as she speaks.

To encrypt the data, Alice picks a random number X between zero and
four billion. Using some clever mathamatics she sends the number to
Charlie without Bob finding out what it is.

Alice adds X to each of the numbers representing how
lound her speech is. At the other end charlie subtracts X to get
back the original data.

How can Bob get the orignal data back? He dosn't know
what the secret number X is. He could try every possible value
of X and listen to the result and see if it sounds like Alice talking
and hope hes lucky enough to find it before he dies of old age.

Maybe he can use Cunning Mathamatical Methods to speed up his search
but hes going to need a roomfull of computers and still a lot of time.

(Yes this is an oversimplified example)

Your dreaming about a scanner that can break encryption in real time.

In countrys like Russia, China or France where using encryption will
get your front door broken down by the security services
TETRA might just be digitally encoded.
You would need two seperate receivers, one to listen
to a control channel the other to grab the transmission.
A couple of DQPSK decoders to recover the data stream. A relativly
powerfull micro to make sense of the control data, tune the receivers etc
and a DSP chip to convert the data-steam back to audio.

Mid-range scanners probably cost the manufacturer about 30 USD to
make. For every extra dollar on manufacturing cost you can add ten to the
final retail price.

I don't think TETRA decoders will be available to scanner enthusiasts
for the foreseeable future (say 5 years at the rate technology moves).
By the time its practical it will have been replaced with something more
complicated. Look at satTV, now cardless DSP pirate decoders have appeared
for analogue systems the evil corporations want everyone to change to
digital TV.

Apparently you haven't paid attention to another strongly encrypted market;
namely, DSS. It, too, was supposed to be "unbreakable." Hackers broke
that long ago and you can now find hacker cards well under $100. to watch DSS
programming for free. Should actually be easier for scanners as they don't
have video to deal with.

Source record: 125727

Scott,

If you wanted to stick with the PRO-2006 (Advantages being that
is is unblocked, among others...) You really have 2 options. Each has
its good points.

CE-232 Interface

Great all around option, do-it-yourself or buy it pre-built, has the
advantage of being able to program the scanner's channels for you, for
use in "Away from the Computer" operations. The Included software has
Scripting options, And general control capabilities. Additional software
packages are available (Such as RedShift CE-232 from www.steaksandwich.com)
which allow you to have instant lookup of who's frequency you are looking
at, Easily Manage thousands of Frequencies, Record Audio to Compressed WAV
files, Manage Limit Searches, easily view scanner activity, and more. The
CE-232 allows the Computer to press the scanners keys for you, and read what
is on the display. The RedShift software will also interface seamlessly with
the WintonePRO software tone decoder (Due to release soon) to give you
integrated tone decoding.

OptoElectronics OS/456 Lite (Or a full OS/456 if you can find one used)
--- This is an add on board which actually allows the
computer to disable the PRO-2006's CPU and tune the reciever by itself.
Because of this, You rely completely on the functionality of the software, as
the Scanner's Memory and functions are not used (It only uses it for it's
tuner). Using this method you can theoretically have more channels (All the
frequencies are stored in the computer, not the Scanner) and depending on the
software used, you can normally achieve a higher channels/second scanning
rate. However, to operate the Interface you have to have the computer on and
the software running, and it cannot program the scanner's memory channels for
you for "Off Line" Operations. The OS/456 (www.optoelectronics.com) used to
be available with a tone decoder for DTMF/DCS/CTCSS built in, but that model
has been discontinued due to the fact that the parts they were using are no
longer available. But the Lite version still works great - Just no tone
decoding. If you want the tone decoding features, you can always grab a
software tone decoder like Wintone (www.steaksandwich.com)or make sure you
get a software package that will do it for you Like the upcoming RedShift
Opto version.

I have both interfaces, as I use the scanner both on-line and off-line.

For either option, the software plays a vital role. I encourage you to look
around and see what you find that suits your needs.

A great source on the Web with information on Software for both interfaces is the Monitoring Post :

http://home.ptd.net/~pro2006/

Hope that helps!

A magazine here recently reviewed an Australian made piece
of trunk-tracking hardware. Not a scanner, but an add-on.
ISTR that it would be capable of making a connected scanner
do the tracking.

The trunking system doesn't involve encryption. TETRA and digital
mobile phones are encrypted with a system that's strong enough
to defeat casual listeners.

From: DarrenD <dsdavis@yahoo.com>
Message-ID: <36E1AD5D.FE3EEEA5@yahoo.com>
Source record: 125732

I'm deciding between the programmable ones and the BCT-12. I'd rather not deal with the programming, but does the BCT-12 really work well?

Will it really pick up my local police/fire/etc? I find it hard to believe that they've got EVERY frequency in the US in there. Besides, I rarely travel out of Massachusetts - why do I need Canadian Coast Guard?

If anyone has any experience with one of these, I'd like to know your thoughts. I love its size & portability (car cigarette adapter), but if doesn't have the frequencies I want, what good is it?

Thanks very much,
Darren

3393. Digital Phone Security/Confirmation

Newsgroup: rec.radio.scanner
Date: 1999-03-06 00:00:00 UTC
From: jdsurfing@aol.comJD
Message-ID: <19990305191421.00294.00004302@ng-fd1.aol.com>
Source record: 125777

I have two questions regarding my Uniden EX 965 cordless phone. First, I'm curious if this is truly a digital phone. Yes, I read the manual and called the company but I really don't trust either source in light of the fact that some companies mislead consumers about specs - the Panasonic GigaPhone *fiasco* comes to mind.

The info in the manual is written with some curious language. In their "Features" section, they do not say the phone is 900mhz Digital. Instead, they write it like this:

- 900mhz Performance
-Advanced Digital Performance

I'm wondering if this could be an analog phone that has some "digital performance" features (whatever that means). Their description on the back of the box also seems a bit indirect:

"900mhz with Advanced Digital Electronics - offers you unparalleled range, performance, sound clarity, and voice security when compared to normal 46/49mhz phones"

Aha! I'm thinking, why did they compare the phone to 46/49mhz and not mention that it's also superior to 900mhz *analog* as well?

So, my two questions are:

1) Aside from buying/borrowing a scanner, is there anyway to confirm if this is a 900mhz Digital or 900mhz Analog phone?

2) If the phone is indeed 900mhz Digital, how much less secure is it compared to DSS? Is the security good enough to protect me from most scanners?

Thanks for any info you can provide.

Does it say Spread Spectrum anywhere in the advertising or docs?

How much did you pay for it? If it was much under $100, it's probably
not SS. Digital can mean anything you want it to mean, including, I
suppose, the fact that you use your digits to push the buttons on the
dial.

It does not need anything so drastic, simply instructing the radio to write erase the EEPROM will do the job. I do not know if this is a feature, but it would be sensible for police, etc. Then again if each radio is separately addressable all you have to do is stop addressing any which are lost or stolen.

I was scanning the Family Service band and came across a voice calling for help. He could barely hear me, but I could pick up enough from him to tell that he and his son were lost in the mountains, and had built a snow cave and needed to be rescued. I phoned the local sheriff, and they were indeed looking for the father and son after they had not returned form a day of snow mobiling. The Sheriff dept got on the frequency and as soon as the sun came up they went up and began searching. They found the pair only four hours later, but unfortunately they were both dead. It was kind of sad, but the sheriff let me keep their radio as a thank you.

It was exhilarating!

Source record: 125592

Does your BC200XLT battery pack not power your BC200XLT even though you charge it and it reads the 7.2v or so ?
You might want to try this as it works, for some, but I don't know why.

1) Fully charge your pack.
2) Remove the pack from the radio.
3) Turn on the BC200XLT power switch.
4) With the BC200XLT power switch in the "ON" position slide the battery pack onto the radio.
5) Did the radio come on ?

This has been reported to work on units that will not turn on prior to the pack being removed and replaced again.
I have even done this. Is it a flaw with the radio or the circuitry inside the battery pack. Or is it magic ? I don't know but it worked. Once you do it the radio turns on and off until the battery goes dead again. The process must be repeated each time the battery goes dead and must be recharged. Weird huh ???

There are no guarantees. However, a double-superheterodyne scanner, as opposed to a triple-superheterodyne, will pick up cellular image frequencies, which allows you to hear cellular activity. Such a scanner is (or at least was) the PRO-25.

I have to disagree with this choice.
The BCT-7 has no controlled delay option and the radio is very prone
to images.
The good points about this radio is that it picks up CB band and cell
images are easily heard.
The 100 channels you mention are not in 1 bank.
The private bank has 25 channels, Highway has 25, and ect..

Any phone that is 900MHZ digital spread spectrum would qualify.

I have several Uniden phones including the model 9100 DSS which I have had for a few years without any problems. Also have models 905 (white color) and 925 (black color) which are the same phone inside. these appear to have the same transmit characteristics as the 9100 even thought they don't claim to be DSS. The scanner will not stop when searched between 902 and 926 MHZ but you can manually search with the squelch open and eventually find a buzzing sound.

There is a new model 9110 DSS that is on sale this week at Office Max for $79.99 that would be a good buy.

Digital and/or Spread Spectrum phones can and do have multiple
channels.

I have several Uniden 900MHZ digital phones including the 9100 DSS
and it has 23 channels. it will switch channels if the signal is
noisy.

The 900 MHZ band goes from 902 to 926 MHZ so you could spread the
signal 1 MHZ wide and still have 24 channels.

For more information about spread spectrum see these sites.

>Is there a decent cheap scanner I can get from Radio Shack that can be
>modified to pick up cell freqs? Any advice would be helpful.
>

Nothing from Radio Shack is cellular-capable, or for that matter, any new scanner sold in the U.S. Some scanners will receive "images" of cell frequencies, but you'd probably be happier with something that you can directly enter the frequencies on.
Have you considered looking for something used? There seems to be an abundant supply of cell-capable scanners for sale both here in the newsgroups and on Ebay. I won't get into the pros and cons of buying used stuff on the net, but scanners such as the Uniden 200XLT handheld or a Radio Shack Pro-2006 desktop would both be good choices. I've seen some very nice units up for grabs and have bought a couple myself that are in like-new condition. The handhelds seem to take a little more wear-and-tear because of their portability, but many have been well-taken care of and would make a really nice scanner for you.
Unfortunately, the words decent and cheap seldom go together in the scanner world. You'll get what you pay for most of the time.
Just my $.02 worth, but take your time and find something that both meets your price range and has the specs you are looking for and you'll be happier in the long run.

Dan

I am installing a scanner in my mobile and would like to hook it to the stereo antenna so as not to add another antenna to the pickup. Can I just put a "Y" adapter in the coax line, or will that cut my recieve on the AMFM radio? The guy at radio shack said that it will really cut down
on the stereo receive. I don't mind a little loss on the stereo side but I would still like it to be functionable for both. Am I asking to much of this antenna? Has anyone out there ever done this. I'm suprized nobody sells an antenna like this. Hey maybe I'm on to a money making idea. Two meter and stereo. Hmmmmmm. My email address is "kb5zcr@aol.com" Thanks for the help. 73

Hello BLAKE BOWERS!

I see that you are forging messages again!

Notice that I had been ignoring your pompus & immature messages
which are nothing more than pathetic attempts at FLAMING & drawing
attention to yourself that you so desperately desire. So when I
stopped responding to you, you then started to forge messages like
the one from Steve Barker in support of you. Notice how NO ONE
posted ANY messages supporting you in your recent tirade or
causing trouble on usenet, so you invented Steve Barker from
a dejanews account! But you forgot one thing Blake, Dejanews
tracks the IP address of the computer used when loggin in!

The message, IP address, & originating location for each are below!

Now Blake, SERIOUSLY, how stupid did you think the citizens of USENET would be to NOT see thru your games & forgeries???

Don't try to deny it Blake. While you were at least smart enough to hang up your modem & dial in again to most likely get a different IP before posting again, the proof is EASY to see! How many users are in your LITTLE, SMALL, MISSOURI town using the SAME ISP as YOU & posting on the SAME newsgroup as YOU & would use their ONE & ONLY USENET POST to agree with YOU when NO ONE ELSE WILL?!?!?!?!?!?!?!?!?!??!?!

Of course, despite the many complaints your ISP has received from MANY unhappy individuals your antics continue. Perhaps complaints about you will have go up stream to your ISP's provider of Kelly Consultants or UUNET!

For a refresher of memory, Blake was caught doing this same thing only a few weeks ago At that time he forgot to dial in to get a different IP! If anyone wants to see that let me know & I will post it.

There are couplers available for just this purpose, that will give better results than a simple Y. Most any scanner dealer should have one for around 15 bucks. I've used one with reasonable success. I saw minor degradation of FM performance, nothing I couldn't live with.

Philip,

Go to RadioShack and pick up a copy of their catalog (free) and a copy of PoliceCall Plus (about $15). PoliceCall Plus has a very good introduction to scanning in the front, plus it will have the frequencies you will need later on.
Stop by a good bookstore or news stand and pick up copies of Monitoring Times and Popular Communications magazines (about $3 each) and read the articles and look at the ads showing the differenct scanners and their prices. Also, check out the model descriptions on www.strongsignals.com on the Internet.

It is interesting however, Bob, to note that on a number of occasions I have searched across bands such as the 40-50, 155-160, 450-470, 850-930mhz ranges and found that while using the stock antenna on the R2 (thought by many not to be the ideal) it was able to receive thing at nearly full strength, while taking my 8200 and no matter what antenna I used on it as far as non-roof type, it was unable to even so much as note that the channel was active. Perhaps on a bench .2uV isn't much but obviously in some cases as this, it is everything vs. nothing. This is only 1 of the 2 areas I am profoundly disappointed in my 8200 with. The other would be the self-generated noise. I would have to say that if Icom ever comes out with a larger version of the R2 that has all of the bells and whistles of the 8200, it would blow it away.

That yard is the BNSF (ex ATSF) yard. The IC line to Joliet runs around
the south end of it.

Check 160.650 for road trains on the BNSF, and 160.920 for the IC trains.
I don't have any UPS freqs handy right now.

Does anyone have experience with the Pro 210XLT? It is a base scanner similar in appearance to the 2004/5/6 radios. I saw one in a pawn shop in the $30.00 range (buried under a mound of dust). I have been unable to find any info/specs on this radio. Nothing posted on Strong signals or the Tandy web sites. I would appreciate any info on this radio. Thanks.

Not sure on similar technologies on DSS vs. encrypted radio, but DSS does send- out "killer" pirate card signals, which fry the pirated cards.

I would also wonder how long a scanner company would be able to sell such a scanner in the U.S. before the govt. and federal agencies, lend them a few words of encouragement, on how to stay in business, in the U.S.

>Should actually be easier for scanners as they don't have video
>to deal with.

Apparently, you don't know the fundamental difference between
one-to-many broardcast systems and lots-of-seperate-links communication
systems.

In satellite TV systems, the encryption key is in a smartcard,
Joe Hacker can dig into the silicon to recover it. The
key is changed relativly infrequently.

In an encrypted digital comms system the key is in the radio at each end
of the link, Joe hacker can't physically get at it.

Even if you somehow get the encryption key for one conversation
then it won't let you listen to any other because a new key is
produced every time a new call is set up.

Incidentally there were cases of Traffic wardens being mugged for
there radios when the police went scrambled around here.
I'v heard they can transmitt a command to individual radios
so they reverse the polarity to the EEPROMS and self destruct.

3483. FS:Pro-64 400 channel scanner MINT!

For Sale : A Radio Shack Pro-64 Handheld scanner loaded ...

Price : US 200 or Canadian equivalent !

Triple - conversion design virtually eliminates reception of image frequencies & cuts that annoying interference . Auto store feature will quickly find & store up to 400 active frequencies while preventing duplication - really great option while traveling and being in a foreign area !!!!

I'm told that this scanner can be hooked up to your PC with software...

Plus , you can search for new and unlisted frequencies in the 17 pre-set ranges or ranges that you decide to set. 40 monitor memories hold frequencies found during search for transfer to main computer memory. Duplicate frequency indicator, has 10 priority channels , also a one touch weather button with pre-programmed national frequencies , display backlight, memory backup.

Unit covers : 29 - 54 , 108 - 174 , 380 - 512 , 806 - 824 , 849 - 869 ,

and finally from 894 - 960 MHZ.

Comes with earphone jack , external rubberized antenna (BNC) , ext. power

jack (on the side of unit) , and a deluxe soft leather case for unit.

Manual , original box included . MINT!

Please indulge a newbie. I have only read the NG for a short time, looking for information regarding a replacement scanner for my BC3000XLT that was stolen from my truck.

After reading several posts, and listening to the advice of a ham friend, I finally settled on a AOR AR8200. The next phase was who to decide where to buy one from. I wanted the unblocked model, although I don't anticipate ravaging the cell band. I received images of cell in the air band on my BC3000XLT and most of it was mindless drivel. Even so I still desired the whole range, I might get bored and want drivel sometime.

After researching several web vendors and checking prices, I selected Bandercom. On Feb. 24th I called and placed the order for the AR8200. I was informed that it was in stock and would ship the next day. A couple of days later while reading the NG, I was a little worried that there was some posts on shipping delays with Bandercom. I was subsequently impressed that Pete Peltola of Bandercom responded explaining that there were complications due to some kind of strike in Finland and that was the basis of delays. Seemed reasonable to me.

Due to a e-mail glitch, I hadn't heard from Pete and sent him an e-mail inquiring about the order. He responded immediately and informed me that the scanner had shipped on the 25th of Feb., just as expected. I received the scanner on March 4th. From Finland to Colorado in almost 7days!!! Although this is only one data point, I suspect that this is more the norm for Bandercom than not. I would not hesitate recommending them to a friend, their service, at least for me was excellent. Thank you Pete Peltola and Bandercom.

: >Should actually be easier for scanners as they don't have video
: >to deal with.

: Apparently, you don't know the fundamental difference between
: one-to-many broardcast systems and lots-of-seperate-links communication
: systems.

: In satellite TV systems, the encryption key is in a smartcard,
: Joe Hacker can dig into the silicon to recover it. The
: key is changed relativly infrequently.

: In an encrypted digital comms system the key is in the radio at each end
: of the link, Joe hacker can't physically get at it.

: Even if you somehow get the encryption key for one conversation
: then it won't let you listen to any other because a new key is
: produced every time a new call is set up.

: Incidentally there were cases of Traffic wardens being mugged for
: there radios when the police went scrambled around here.
: I'v heard they can transmitt a command to individual radios
: so they reverse the polarity to the EEPROMS and self destruct.

Actually, the "self-destruct" mode is a normal OTR(Over The air Rekey)
signal, but instead of updating the radio, all applicatable settings are
set to useless values.
The end effect is the same, but no hardware is actually "fried".

Matty,
Click twice on the "speaker" icon in your toolbar. Then click
"Options", "Properties", "Recording". Make sure the "Line-In" and/or
"Microphone" (Whichever you are using) is checked, press "OK",the recording
control panel will show, make sure "Line-In" and or "Microphone is checked and
the volume set. There is a level meter on this panel, if you get a signal
here it should work in the program.

Regards,
Rolf

Lee,

Your observations are very credible. Two comments:

1) The 0.2 uV difference *is* significant when comparing a
0.2 uV vs. 0.4 uV figure. That's 6 dB -- a difference you
can hear.

2) The SINAD measurements I cited do not, of course, take into account
the antenna.

tos-tng (Fred) replied to my questions:

>>Why
>>is the Autoscan System a dead giveaway that the phone is analog 900mhz?

>because it indicate there are 30 separate channels to choose from indicating
>that it is NOT spread spectrum which would use a single very wide channel.

I know the Uniden EX-965 isn't spread spectrum, but wasn't sure why Autoscan couldn't be used on a plain digital phone.

>Well it is a 900mhz phone and one of it's capabilities is "digital"....so
>technically it is a 900mhz digital phone. On the other hand if it said the
>phone was capable of "digital communications" in the 900mhz band then I would
>read that in a totally different way....and it would NOT apply to the model we

>are talking about.

Hmm. Now I'm getting a little confused. How does this affect the phone's security (or lack thereof)? There was a reply from c.dean@cwix.com that made me believe the phone's "digital capabilities" would make it fairly impervious to scanning. Here's what he wrote:

"Rest assured, the EX965 uses wide-band digital modulation and all somebody with a scanner would hear is white noise, and then only in WFM mode. I know because I bought one and that's the first thing I checked(with a scanner). I agree their marketing language is a bit ambiguous, especially now when every cordless phone has"digital" something in their specs." (c.dean@cwix.com)

So, now I'm wondering what makes a digital phone "digital". If I have the same security as a true digital phone (whatever that is) with a phone that merely has "wide-band digital modulation", what is the difference? Are they equally secure, but with minor performance (like range) differences?

I actually own one of these phones, and it uses speech inversion which is easily decoded by a listener using circuits available from kit suppliers and schematics available on the web. This phone worked well for 3 years, and is now junk. It started acting "crazy" and I could not find anything obviously wrong with any of the components, and Motorola wants a minimum of $100CDN just to look at it. Probably something stupid I can fix, but time is money and it isn't worth it.

I now have a Uniden exp920, a 900 MHz two line version. It has no security, but it works beautifully with about 200 ft inside to outside range. I just don't say things on it that I don't want other people to hear.

Bud,

Come now. You want Mackey to be up front and factual when he posts? You left off the smiley face. What has it been? Four years? No, closer to six years of John Mackey (JEMG via FIDO in the beginning) forgetting to include all the details, misquoting or out and out lying. John suffers from Mackerettes syndrome. He CAN'T be honest and truthful. It is a sickness beyond his control. He types on a keyboard and lies flow like the mighty Columbia River. He tries to be on topic but can't. He tries to fix repeaters and they smoke. John lives a life of lies, mistruth and frustrations.

Pity John or hate John or discourage John, try and help John but never, never BELIEVE John!!!!

Mackerette syndrome.....isn't it sad?

3518. Why do most scanners block 175-225 MHz?

Newsgroup: rec.radio.scanner
Date: 1999-03-08 00:00:00 UTC
From: Radio Daze <radiologist@yahoo.com>
Message-ID: <01be69a5$ed250820$422da2ce@default>
Source record: 125510

I have owned several scanners, and it seems that most of them (SC-150, Pro-51) block the 175-225 MHz frequencies.

I realize that these frequencies are allocated to television, and most scanners don't have the wide FM needed to properly listen to TV audio, so I'm sure that adding wide FM would surely be an unnecessarily expensive addition to a scanner when most of us use our scanner for narrow FM only.

But, there's another reason to listen to the 175-225 MHz freqs. At our radio station and in my church, all our wireless microphones broadcast within that range. And they all use narrow FM. For me, in my job, I have to be able to monitor everything our radio station is doing. Therefore, I need to be able to listen to the 175-225 MHz freqs in narrow FM. This is why I bought my Yupi 7100. But for those who don't otherwise need a full-coverage scanner, it still would seem that the manufacturers would "let us have" those 175-225 MHz freqs anyway. The cost would be negligible, and it might open up a whole new world for many scanner owners.

Wireless microphones can be very interesting to hear. It's cool to isolate a field reporter at a football game, pick out different singers or instruments of a concert from outside the building, or to hear a public speech from a block away. If you have a scanner that will pick these up, you ought to give this a try!

I have the following 2 scanners for sale

1 - Uniden Bearcat SC150 800MHz scanner, twin turbo, used but in good shape. 100

channels, no modifications done. Unit has a date code of 'OFIG' first $105 obo takes it

1 - RS Pro-2039 Base scanner. Very small and in great shape. 200 channel, 800MHz

HYPERSCAN. Broken antenna top, but functions fine and has optional BNC antenna connector on back. Unit is 120VAC ready with cord. Asking $125 obo

I have a number of mint condition Black & White CCD cameras. Follow the below link toview . They are very small encased C-mount cameras(I have some lenses for sale as well) They were purchased new for $249 each. I
will sell for $150 each, or can work out a deal for qty. Let me know if interested

It really has more to do with powerful signal handling than anything
else. TV transmitters can be orders of magnitude more powerful than
most things scanners are made to monitor. So unless your scanner has
good dynamic range, it is better off blocking the TV bands. That way
IMD doesn't become a bad nightmare (imagine customers wanting to know
why there is a peculiar hum on so many channels).

Here's a cheap and dirty way out: Use a cable TV tuner box and hook
the TV side to your scanner. It works well --even for cellular
telephones.

The FCC says:

Licensee Name K & A MUTUAL INC
Callsign KNHQ729
State NY
Service GB
Station Class FB2
Power Output 125
Freq Assign (MHz) 855.7875
ERP 475

From that I'd gather they were involved in some sort of stock quotes in which
case it could be a proprietary code.....enjoy.....

I checked some of these 900mz with my scanner. Sure enough, alot of cells and home portables can be heard.

Maybe the govt will block these? I notice most places are selling 900mz portables now instead of the 800mz, that you use around your home.

My portable freq are: 902.300, 902.600, 902.900, 903.200, 903.800, 904.700.

The panasonic, has a channel button on it. Its interesting to drive around town, use it to listen in on stuff. Only $89.95 at CostCo.

If you have Microsoft Access or something like it, use that. You can easily build your own data base.

>I tried other software, such as RadioManager, had a difficult time, and
>didn't quite end up with what I wanted. Ditto for PC895.

I've been kicking the idea around of releasing a new version of PC895, as it's rumored that the new Uniden trunktrackers due out this year will use the same commands that run the 895, + a few new ones.

If you would, could list for me what you felt was wrong with PC895, and what could be added to make it better? I've already planned fixes for the database manager and communications portions of it. Plus, the new version will work on Win 3.x systems as well! (Got a lot of requests for that)

I've planned to implement the following changes:

Doing away with the interface used to enter frequencies and talkgroups in favor of 3 data bound grids. These will work very similar to Access tables or Excel spreadsheets.

A user-selectable delay between scanner commands. This will allow people with faster systems to run PC895 without errors occurring.

Enhanced database import/export: This may prove difficult, but I'd like to add the capability to import frequencies or talkgroups from a number of database formats, foxpro, dbase, paradox, and even excel sheets in addition to APF files.

PC895 will come in two flavors, a freeware version, and an enhanced retail version that will scan multiple trunks, trunked and conventional simultaneously, and decode DTMF tones using your soundcard. In addition, it will have a new name, although I don't know what I'm going to call it yet... ;-)

I don't plan on putting in the ability to control your scanner via the internet, or other silliness like that that I have heard of. I don't see a use for that.

If you prefer, you can reply via email to ziggy7445@yahoo.com

Thanks for your input.

I've got a different question regading POC32. I'm tuned to a valid pager
freq (snagged directly off the back of a pager), I get a good signal in, and
the little folder icon lights up to indicate that it's receiving a valid
POCSAG message, but nothing appears on the screen. Anyone else experience
this, and if so, is it fixable? Or is it a "feature" of the freeware
version?

Thanks,
-Phil

Hello,

I seemed to ruin my 9000 tonight by touching it and discharging a
static shock to the unit.
No buttons work at all.
The unit seems to be broke.
Is this unit ruined?
It's a UBC so i doubt if i can get it serviced.

>... from several
>authorities (competent scanner >dealers) it is
>well known that the R2 runs rings around the 8200 big time
>in the area of raw sensitivity....

I measured the sensitivity of one AR8200 (s/n 550004)
and two IC-R2s (s/n 1104 and 1385) in my lab.

I published the AR8200 sensitivity graph in Oct 1998 Monitoring
Times. The IC-R2 test results will appear in the April 1999 (next)
issue.

On average the two ICOMs are 0.1 - 0.2 uV more sensitive
than the AR8200.

While you cannot extrapolate this small sample to a
broad generalization about all IC-R2s being more
sensitive than all AR8200s, I though you might find
these data points interesting.

Grove radio in NC has several things that can help you out. Try
grove.com(?) and look at the no-tenna, which uses your vehicle's body
as an antenna, or the Y splitter which lets you use your car radio
antenna as a scanner antenna.

On Sun, 07 Mar 1999 20:41:17 GMT, kb5zcr@my-dejanews.com wrote:

3571. BC 895xlt

Newsgroup: rec.radio.scanner
Date: 1999-03-08 00:00:00 UTC
From: "E.J. Caylor" <Caylorman@aol.com>
Message-ID: <7bvlsn$5dp$1@mozo.cc.purdue.edu>
Source record: 125569

After finding out that Radio Shack no longer produces the PRO 2045, & also learning the PRO 2050 doesn't recieve aircraft & military bands,, I'd like to know if the BC895 xlt is the only thing left. I was hoping to save some cash with the 2045, but it looks as if that thought is now worthless. I could use some help. Are there any scanners out there that have the same frequency bands as the 895, but not so steep in price? Thanks in advance.

Caylorman@aol.com

old, no 800 but a good scanner. I have 2 of them bought them a few
years ago for 50.00 for both. I use them to listen to the CHP. and
things like that.

> >ELSE WILL?!?!?!?!?!?!?!?!?!??!?!

> Actually, my ISP covers a scad of towns across the area. Many users,
> with hundreds of lines. Your post shows nothing.

Wrong again Blake Acording to the web site for YOUR ISP they
only cover 3 towns, all small towns in Missouri. On their web site
(www.townsqr.com) they state as follows:

"Providing complete and local phone call Internet Services in
Missouri for West Plains, Mountain View, Willow Springs, and the
surrounding area"

> Lies again Johnny. Aren't you ashamed of yourself? My ISP has only
> gotten complaints from you, or your forged names.

No Blake, I do NOT forge. All the complaints you mention that have been
received regharding your poor behavior are from real people, not me.
It is YOU & Bud that have been CAUGHT FORGING in the past, NOT me!

You on the
> other hand, have been kicked off multiple ISP's, which has been
> proven.

Then post your proof Blake, you won't be able to because I haven't beenb
EVER kicked off of an ISP!

>Is there a good FLEX decoder out there that utilizes a computer's sound
>card?

Flex and Reflex protocols cannot be decoded using your sound card - there are 4 levels of data and the sound card is capable only of decoding 2 levels.

If you want to decode Flex try a 4-level FSK decoder. I have one and it works great! I got it from Texas 2-Way. Its called the DDM-4 and it is a small box that hooks up between your scanner and your computer. It requires only a single voltage power supply and is very well built. You can call Texas 2-Way at (956)702-2481 or email them at n5sim@aol.com

3590. Aiplane Wireless Phone

Newsgroup: rec.radio.scanner
Date: 1999-03-09 00:00:00 UTC
From: Donald Smith <smithdon@primary.net>
Message-ID: <36E59219.504A195B@primary.net>
Source record: 125388

I have acquired a wireless phone that was used in commercial airliners as part of an airline collection. The passengers would put their credit card into the wall unit, and the wireless phone would be released. The passenger could return to his seat, and telephone from there. Does anyone know the frequency of the wireless system in the plane??? or even the voltage need to run the unit?

3591. Re: ICOM R-8500 vs PCR-1000

You can read this page for lots of info:

http://www.strongsignals.net/htm/my_rank.htm

Especially ,please read the test/review on the Pro-2042 with
the Optoelectronics OS535 computer-board/interface.

I think this is the best setup you can get at any price. Even the
most discriminating users count this "rig" up among the three most
capable units at _any_ price. The Icom R-8500 is among the other
top alternatives ,but will cost more than five times as much !

The PCR-1000 is not _quite_ in the same category ,but perhaps
among the top 10 units..

Best regards,
Knut Otterbeck

A 1/4 wave coax stub works ok for notching 2 meter interference
from a TV set.

But, if you still want decent scanner reception in the same band
as the interfering pager, and you want to notch out just the pager,
a quarter wave coax stub is a poor performer.

I built two of 'em and used an HP spectrum analyzer and tracking
generator to trim the length -- a VERY touchy procedure.
3/16 inch makes a big difference. You'll never be able to
tune it right without good lab equipment.

If you do cut it to the "right" length, you will find it is
broad. It significantly attenuates signals you want to hear.

I tested a couple of PAR Electronics (no relation) filters and they
were impressive. Of course, you must be sure you know
the frequency of the offending pager and order a filter
aligned for the right frequency.

You can read the test results of my experiments in
July 1998 Monitoring Times magazine . I published the frequency
response graphs of two 1/4 coax stub filters and a PAR filter
I tested.

Nope. The CE232 uses an entirely different protocall than PROBE. (Not for
the serial port, but to communicate).
the CE232 doesn`t use pipeline tuning or any if that.

Donald Smith <smithdon@primary.net> asked about:
> ... a wireless phone that was used in commercial airliners ...
> Does anyone know the frequency of the wireless system in the plane???
> or even the voltage need to run the unit?

You might consider 28vdc or 115v 400cycle ac for aircraft power.
I don't know the onboard wireless frequency, but the air-to-ground is:

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

800 MHz Air to Ground Telephone [22.1107]

- - Airborne - -
Blk Ch 1 - Ch 29

10 894.0055 - 894.1735
9 894.2055 - 894.3735
8 894.4055 - 894.5735 Guard Band -
7 894.6055 - 894.7735 .x765-.x797
6 894.8055 - 894.9735
5 895.0055 - 895.1735 Control Channels -
4 895.2055 - 895.3735 .x813-.x973
3 895.4055 - 895.5735
2 895.6055 - 895.7735
1 895.8055 - 895.9735

Transmissions are AM (or AM/SSB), and converting to digital.
Channels are spaced 6 kHz apart. A specific block of 29 channels
is assigned to each geographical area. Ground frequencies are 45
MHz lower and do not echo the airborne half of the conversation.
Service is used on passenger airlines.

Selling a Radio Shack Pro-2046 mobile scanner. This was a shelf queen / demo unit and has not been used. I've had it for one month and not used it. The 2046 is basically a Bearcat 760 clone without the CTCSS feature. It includes:

1) 100 Channels, covers the following frequencies: 29-54Mhz, 108-174Mhz, 406-512Mhz, 806-823.9375, 851-868.9375, 896-956mhz
2) Priority channel
3) HyperScan & HyperSearch
4) Preprogrammed Service Search
5) Data-skip & Search-skip

I have seen some units offered that were supposed to be cell capable but I don't know if this unit is. It comes with a 12 vdc power cord, mobile bracket, box and docs. I will also include the receipt for warranty purposes. I am selling it for $100 plus shipping. Buyer to prepay by Postal Money Order. Feel free to check Ebay for references.

My wild guess would be......
GP-300 = 403-433 mhz lo split 438-470 mid split 459-495 mhz hi split I think....
MT-2000 = 403-470 mhz lo split 450-512 hi split

I'm selling a Motorola Minitor II. I checked this unit and it was working fine. Cosmetically it is an 8 or 9. This pager does not have reeds and is on a frequency of 155.895. I do not have the drop in charger or battery for this but I have found an online source for these items which should cost less then $30. I am selling it for $75 plus shipping. Buyer to prepay by Postal Money Order. Feel free to check Ebay for references.

Stuart,

My 2046 doesn't pick up normal cell frequencies in the appropriate cell range. It is manufactured so it can't do this. It can't be modified, however it does pick up cell images quite well. Starting at 896 it begins to pick up images. It continues on up through about 915 Mhz. The problem is distinguishing between 900 Mhz phones and the cell images. They are both in the same range. When you lock on to what you think is an image you can subtract 21.7Mgz which is twice the if stage frequency. This will give you the exact cell freq. and you can verify this with another cell capable handheld. It will be off just a little because the step setting is 12.5 on the 2046 and cell freq. steps are 30. It is a really nice scanner and I certainly love mine, well worth the $100.00 asking price.

>didn't want on the new system, they are still using their old 150mhz
>simplex system ...
>

Metro PD is constructing a new Metrocom in the southwest valley, and from what I heard, they will have a separate 800 MHz system. This new system, according to sheriff Keller may not be up and running until after the first part of next year, so we will still be hearing Metro on the current VHF channels for at least another year. Metro is also planning to add four new substations during the next five years, so a new radio system is imminent, one way or the other. I have also not heard if the proposed new system will be digital, analog or both.

Date: 1999-03-09 00:00:00 UTC
From: robdon33@aol.com
Message-ID: <19990308194042.13304.00000177@ng145.aol.com>
Source record: 125451

Hi all. I've saw a few posts regarding Metro Police, Fire Department and other frequency requests.

I have a scanner frequency list (in .txt) format, which I update at least once every month or so, if anyone is interested.

Las Vegas Metro Police is NOT on the 800 Megahertz system like the fire department is today. Metro is planning to go to 800 MHz, but will more than likely use a different system, as they are constructing a new MetroComm.

The only police departments operating on 800 MHz at this time is the North Las Vegas PD and Clark County School District PD. NLVPD operates on Erricson EDACS and there is no trunk tracker to trunk track those frequencies...until the 245XLT comes out. CCSDPD is on a Motorola Type I system and can be trunk-tracked on the 235XLT, 895XLT or the Radio Shack TTs.

I have not heard about plans from Henderson PD or Boulder City PD regarding moving to 800 MHz at this time.

Last, Nevada Highway Patrol operates mostly in the 150-151 MHz range (they still use the 42.500-42.940 range) and there are a few frequencies in the 161 MHz range as well.

That's all for now. As soon as I hear more about the future PD 800 Mhz system, I will advise.

Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.swap

I'm reposting this after 2 buyers backed out after they said they wanted it, and I won't stoop to Ebay's nonsense, sooooo, here it is again.

Pro-2006, with on/off switch for backlight, which works fine. Date code 5A3. It's an 8-9 out of 10 and has a couple of very minor scratches on the top of the case. Cell & speedup mods, otherwise stock.

Nothing broken, missing, cracked or discolored. With original manual and internal whip. I'll throw in a 12VDC cord if you want one. Works great.

$250 shipped UPS ground. More if you want next day or FedEx.

Reason for selling: I have to pay the !@#$ IRS this year.

Thanks,
Jon

3632. WTB or Trade: AOR 8200

Something I've been wondering about. I've thought about buying one of these new openers. I would have a remote in my car, and one in my wife's. If she uses hers, and the code rolls on to some random code. How will my remote get me in? Just a question.... Thanks, Kim

I have the following Radio, and electronic equipment for sale. Will consider trades for Pentium computer EQ. All working last time tested unless noted. Shipping is extra.
Thanks

Tempo-1: Tube type Ham Transceive with Power Supply.Covers 80-10 meters. Looks good and works well. $200

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $100

Lafayette: HB444/25A Looks and works great. This is an all tube 25 channel base unit with a nice chrome trim all around. would rate an 8 in looks. I think the mobil mounting bracket is also included, with nice heavy cast alum mic. $125

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $125

HW-32: 20 mtr single band xcvr ,mbl mounting bracket, and HW-13A mbl power supply with connecting power cord. Will also work with the Heath AC power supply. looks good works well on AC power have not tried it mobile, $125

Non Tube Items:

Marantz Model 2220B Stereophonic Receiver, with optional real wood case. This unit is in excellent condition, both in looks and operation I would rate a 9.7 in appearance. Also have original manual, also in excellent condition. $350

AR Inc: Stereo Amp, All solid state. $100

Traynor: Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. As is $50.

Swan Phone patch: with hook up cords. This unit looks real good, but is also untested. As is $35.

MFJ Antenna Tuners: Have 2. One is 941B and the other is 941C. Both rated a 300 Watts. $40 each.

Siltronix Model 90 VFO: Excellent condition with three position crystal switch. $75

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $200 for both.

Bearcat 250 Scanner: Have two. One working and one for parts. $75 for both.

Bearcat 210XL and 220 Scanner: One of each complete, but not working. $25 each.

Kenwood MC 50 Mic: Works OK and comes complete with cable and input jack. $50

Hello All,

I thought I would post this in the groups, to invite all of
you to my new webcasting website.

http://www.honk.org/jpx

The first of it's kind ever. Live Amateur Radio Webcasts
from Ottawa, Ontario Canada, delivered live on the net.

Listeners will require Windows, and the lastest version of
Winamp.

All webcasts are streamed using MP3 technology.

So if you are interested in listening to some of the
Amateur Radio Activity from the Ottawa, Ontario
region, and are to far away, come check it out!

Visit my website for our schedule and other information.

Also, we have special presentations and music webcasts.

Our official Launch is Thursday March 11th 1999.

Have fun and enjoy!

James Poulin
VA3JPX

3651. Radio Shack Frequency Counter

Newsgroup: rec.radio.scanner
Date: 1999-03-09 00:00:00 UTC
From: Colin Leathley <leathc@tdbank.ca>
Message-ID: <36E558DF.777DB6BD@tdbank.ca>
Source record: 125481
Body handling: Binary attachment payload not displayed: leathc.vcf

Can anyone offer any opinion on the the Radio Shack Frequency Counter
that is in their current catalog (not catalog number 22-305...it has
been discontinued).

Sorry, I don't have the catalog number for the new one but, it is
selling for $144 (Canadian or approx $80-85 US), covers 1-1300MHz and
has 4 gate speeds (1, 10, 64, 640). I had a look at the manual in the
store but, it doesn't give any indication of this counters effective
range (distance).

Would appreciate hearing from anyone who has this particular counter.

Thanks in advance for any insight.

Regards ... Colin

3652. Decoder Software

Newsgroup: rec.radio.scanner
Date: 1999-03-09 00:00:00 UTC
From: nexussix@engrs.unl.edu
Message-ID: <7c3mpf$9on@crcnis3.unl.edu>
Source record: 125482

What and where is this decoder software I hear about once in awhile on this newsgroup? It is for decoding different digital signals? Does one need to make this discriminator mod to the scanner for these programs to work? I know about DTMF decoding but can one decode say for example beeper control signals and data?

USENET? I haven't seen anyone flaming the USENET. All I see is everyone having fun at your expense. They make fun of *you* loony boy. I make fun of you. It's irresistible in your case. You're a mental midget dealing with an unfulfilled god complex by running amok on your little keyboard. The fun thing about you, is that you're totally oblivious to people laughing at you.

But I'm sure most people respect the USENET.

Just like I'm sure most people don't respect you.

You friggin' loon.

(P.S. - and don't get me started about you going on and on about how you can tune your RF oscillator with a metallic tool.)

There are quit a few enhancements that you can do with the Pro-2042.
Some of them are not just spelled out exactly for this particular
scanner, but with some patience and the schematics you should be able
to impliment these mods and come up with some on your own.

Well, for starters....
1) S-meter
2) Center Tune Meter
3) Extended Delay
4) Auto Tape Record Switch
5) Extended memory
6) Data-Tone Squelch
7) SCA Decoder
Basic mods from internet and the book "THE ULTIMATE SCANNER"
8) Computer interfacing
Optoelectronics OS535
http://www.optoelectronics.com/
PROgramit Interface
http://www.qsl.net/ka2pyj/
Boondog Automation ISA card interface
http://www.boondog.com/
9) Remote Control (see PROgramit's page)
There are others that can add a few features, but they don't readily
come to mind.

Scott-
Yes, it can happily coexist with the Opto456/OS456Lite/OS535
board. In fact you can tap off of the OS boards to get the signal for
the PROgramit interface. You don't have to worry about switching
cables, etc. and you use the same COM port and the OS boards DB9. No
additional plugs, holes, etc.

If your Detroit Freq listing weren't' so incredibly sloppy, I assure you, I'd just keep quiet, but the listing is just as ghastly as it was when you advertised it last year!

It seems like much of your list was transcribed from an ~1973 edition of POLICE CALL by a dyslexic, one-armed 4 year old...

The least you could do would be to update it with the info from a '93 issue of POLICE CALL, and have 10 year old copy it for you... But if you REALLY want to improve your Detroit freq list, remove all the text & just leave the artwork!

I do not quite understand MASC, but I have a thought that I would like you to pass me your thoughts on....

I understand that MASC uses a rolling inversion that is set every time the unit transmits by send a data blast to the unit receiving (Or there abouts)

Would it not be possible to decode the data blast and to recover the inversion settings, rather than try and decode the whole signal.

Excuse my ignorance, but if this is the way that you would decode it, then I apologise and please feel free to flame to death :-)

If the truth can be told, o as to be understood, it WILL be believed.

Hello!

Our local Radio Shack dealer has the Pro-71 on sale for $89.99. This scanner features 100 channels + aircraft band.

It looks like an exceptional deal. Any thoughts from the news group?

I own the Pro-70 and it works great, except for the fact that it has 50 channels - aircraft.

Thanks for the input!

3677. Reviews on Sony ICF-SC1 -vs- BC3000XLT

Newsgroup: rec.radio.scanner
Date: 1999-03-10 00:00:00 UTC
From: Ryan <"rrichards[NO SPAM]"@benham.com>
Message-ID: <36E6A4FC.73EAEF08@benham.com>
Source record: 125345

Has anyone seen any reviews (or can you point to any online) for the Sony ICF-SC1 scanner? I was thinking of buying this (its cheaper than the Bearcat BC3000XLT) and I always likes Sony but haven't seen any reviews on either radio.

Thanks for any help
Ryan

Re: HR 514, The "Wireless Privacy Enhancement Act"

Dear Senators:

I read with considerable dismay this new Bill, "The Wireless Privacy Enhancement Act." And while the goals are laudable, the facts and rights it tramples to reach them are not.

For this reason, I strongly oppose it. It has no real protection to offer to the general public, it violates the rights of radio users and listeners far and wide, and from a technical and practical standpoint it is a substantial nuisance and completely unenforceable. Thereï¿½s even a good chance that it may be unconstitutional.

Surely you have heard judges tell the public that "ignorance is no excuse for the Law." Well, Iï¿½m writing this to you because "ignorance of technology or society is no excuse for a bad law" This fact of life cuts both ways, Ladies and Gentlemen. Ignorant legislation will surely lead to lawlessness; and this Bill goes against every bit of common sense and technology.

If you are thinking of voting for this Bill, then I feel obligated to acquaint you with a few facts of physics, history, and human nature. I should mention that Iï¿½m an electrical engineer (The Johns Hopkins University, 1990), an amateur radio enthusiast (call sign AB3A, licensed since 1975), and a registered voter in the State of Maryland.

Why it is Impractical

First, there are serious problems defining exactly what a "scanner" is. Most do not realize that radio test equipment, such as a common service monitor used in radio shops everywhere, is often nothing more than a calibrated scanning receiver. Further, even if a radio receiver receives only one channel at a time, and has no

memories for scanning (thus evading the current definition of "scanner"), one can still attach a personal computer to perform that function. I doubt you would be interested in seeing the Federal Communications Commission regulate computers as well...

The problem with the definition of a "scanner" is that with very few changes it can legitimately be sold as "test equipment". Further, it would seriously hamper the legal activities of radio shops everywhere if all test equipment were made so that it could not function on certain bands of frequencies around 800 MHz. Radios generate their own signals internally and some of these internal products may be in the very bands this legislation seeks to block. How is a radio shop or private individual supposed to work with test equipment which has been lobotomized by this legislation?

Second, how can we reasonably define the difference between a private person who wants to get in the radio business, an amateur radio enthusiast who wants to build radio equipment, and Representative Billy Tauzinï¿½s mythical "electronic-stalker." I know several individuals who have businesses which operate out of their garages and basements. They perform free-lance technical services such as pager reconditioning and repair. They need test equipment and scanners which perform at the frequency ranges this Bill seeks to block. Most of these businesses arenï¿½t incorporated. What documentation should we have them produce to prove theyï¿½re legitimate?

And what about amateur radio operators like me? Is it really the intent of this legislation to hamper my ability to repair and construct radio equipment? And what checks would you expect of those who sell "test equipment" to keep it out of the hands of those "electronic-stalkers?" We depend on radio test equipment far too much for Congress or the FCC to suddenly start controlling access.

Third, scanners are used mostly by radio enthusiasts. It takes some technical background to know what buttons to push on a scanner, to know what the conversations on the air are talking about, and to know how to erect an antenna properly. So exactly what kinds of measures would be reasonable to prevent a scanner from being "readily modified?" A radio hobbyist will usually find ways around these problems if inclined to do so.

However, letï¿½s assume for a minute these problems could somehow be addressed. Even if one were to eliminate the problem of defining what constitutes a "scanner"; even if one were to define who a legitimate user of an unblocked scanner ought to be; and even if one were to define exactly what "capable of readily being altered" means; --we still canï¿½t stop someone from listening to a cellular telephone call merely by legislating how scanners should be built.

Itï¿½s not difficult to build a frequency translator which would make the entire cellular telephone band available to lower frequency scanners. In fact you donï¿½t even need to make one. You'll find them

in millions of homes across the country. Theyï¿½re called Cable TV Tuners and VCRs.

No special abilities or tools are required to hook a cable TV tuner box to an antenna, and the TV side to the scanning radio. Set the Cable TV tuner to any channel around 70 or 80 and voila! Now cell phone conversations show up on the low VHF bands. This is a cold, hard fact: We can regulate construction and distribution of scanners until no more paper or ink remains on this planet, but it wonï¿½t affect the problem of people monitoring cellular telephone conversations.

In fact, last year I submitted comments very similar to these with the FCC when they proposed exactly the sort of "tamper proof" regulation this Bill suggests (I made formal comments on FCC NPRM ET Docket 98-76). After numerous responses from manufacturers and individuals alike indicating how ignorant and unworkable this effort was, the FCC appears to have shelved this Notice of Proposed Rule Making (NPRM). I think you should do the same with this Bill.

Why it Doesnï¿½t Protect the Public

Would you tell someone itï¿½s OK to ride horseback in the nude through a city because nobody is going to look? Remember Lady Godiva? Even she suffered the original Peeping Tom. In response to this problem, would you legislate against public sale of binoculars to keep them out of the hands of peeping toms?

What most do not realize is that the very feature which makes radio communications "wireless" also makes it public. Radio waves propagate nearly everywhere --thatï¿½s what makes them useful. It is also what makes radio waves nearly impossible to keep out of receivers anywhere. This isnï¿½t a new discovery; itï¿½s as old as the technology itself.

So historically, radio users have approached this very public medium by saying to themselves "donï¿½t say anything on the air that you wouldnï¿½t say in front all your friends and enemies." Anything private should be encrypted (and hope that nobody cares enough to bother cracking the cipher). Thatï¿½s how radio has always been, thatï¿½s how it still is today. No law can change it.

Those who do not understand this fundamental concept could get the mistaken idea from this Bill that their unencrypted radio communications can still be private, when there is no technical or practical way to make it so. This Bill may give some the impression that itï¿½s OK to speak freely because "nobody is listening."

Thus, if implemented, this proposed legislation would result in a classic example of the law of unintended consequences. More people will have a false sense of security, airing all sorts of private details in public; and there will be more people tuning in because there is so much more interesting stuff listen to. The very legislation which is supposed to enhance privacy leads instead to more

violations of privacy. Is that really what this Bill was trying to achieve?

Why This Bill Violates The Publicï¿½s Rights

We celebrate free access to information in our country. We try our best to make sure that one can read or listen to anything on public display. So why place restrictions on listening to any kind of radio receiver? If two people are shouting at each other across the street --is it sensible to make laws telling me I should not listen?

As I explained previously, the radio spectrum can only be regarded as a public resource. Contrary to what you may have heard, radio is not like real estate. Real-estate can be made private. We can install fences, trespassers can be found, and access to the land can be controlled. However, no-one can stop an individual from tuning a radio receiver from the privacy of his or her home. In fact, no-one can detect whether someone else is monitoring a radio signal because reception doesnï¿½t affect the radio signals in any practical sense.

And finally, since the point of using radio is that it penetrates most buildings, borders, and other obstacles; how can we consider any other practical way of regarding radio other than as a public resource?

Cellular telephones use this public resource. If people have an unencrypted conversation via radio, itï¿½s the same as if they had been yelling in plain English at each other across a crowded street. What grounds could anyone use to defend the notion that radio users have a right to privacy?

Besides, there are valid reasons why someone might listen to cellular telephone calls. For one thing, it is an excellent way of taking the pulse of a city. I should point out that tuning in to the cellular telephone bands with a conventional scanner results in hearing snippets of anonymous conversation. Very few people have the ability to decode the traffic in the cellular telephone data channel so that they can tell who is talking, or follow a conversation from cell to cell.

In spite of this drawback, anonymous conversations can be interesting and even useful. One might hear drug dealers talking about how their market is improving now that kids are back in school, traveling salesmen conversing with their mistresses, business deals going up and down, harried moms and dads working out their meal plans so they can go grocery shopping, girlfriends chatting gossip and so on. Itï¿½s a cross section of life in the fast lane. It can be a very educational view of what the faster paced lives in our society are doing and how theyï¿½re doing. If I ran a local newspaper and I was looking for a place to gather suggestions on articles Iï¿½d like to publish, Iï¿½d certainly consider listening to cellular telephone on a scanner --not to garner specifics, mind you, but to get general ideas

of what people care about.

I feel this Bill would further the terrible practice started by the Electronic Communications Privacy Act (ECPA) of holding information such as this off limits to the general public. Itï¿½s as if there was an entire wing in a public library containing sociological data --and we are prevented from using it even though it is part of a public library. There arenï¿½t many bills before Congress today which are this repressive. Do you want your name on this one? Can you be sure that it doesnï¿½t violate the Bill of Rights?

The Legislation We Do Need

Virtually every democratic country in the world sees the radio spectrum as a public resource to be managed for the public good. Only despots and communists have dared prohibit casual reception of radio. This Bill seeks to do just that. If it succeeds, some might later seek to mark off other bands of spectrum they donï¿½t want the public to listen to --such as the international short-wave broadcasting bands. There is no legal or practical difference between these two acts. This "radio privacy" legislation would take us still further down the road of good intentions to hell.

Instead, letï¿½s look back to the original "radio secrecy" section in the Communications Act of 1934. It was surprisingly enlightened legislation. Basically, it did not prohibit reception of any frequency or any kind of traffic; however, if one overheard private communications, then revealing, acting, or profiting from what was heard was illegal. There were also specific exceptions where divulging the things you overheard might be allowed (For example, before a court of law).

In short "radio secrecy" is enforceable, "radio privacy" is not. To prove someone guilty of radio privacy violation, one would have to prove they had been listening. For police to do this, one would have to place an individual under so much surveillance that the police and courts would be violating the civil rights of the listener. Radio secrecy, on the other hand, relies on a personï¿½s actions. Divulging a conversation heard on the air can be proven. Acting on information heard in a cellular telephone call can also be proven. We donï¿½t have to invade anyoneï¿½s privacy to do it.

Furthermore, there is a technical alternative to "radio privacy." Digital encryption and spread spectrum technologies can make portable telephony much more difficult for the average person to receive. Why make questionable legislation to fix this problem when a viable technical solution (PCS telephony) is available in stores right now?

Finally, as evidence that we really have very little need for radio privacy, I cite the example of those ubiquitous cordless phones and baby monitors we use in our homes. People overhear each otherï¿½s

conversations from these devices all the time, both deliberately and by accident. Yet nobody thinks much of it nor do they often reveal what they hear. The difference is that warnings exist on devices like these, so most folks are careful about what they say when they use them.

I implore you to research and understand this issue better.
We need good legislation for better "radio secrecy." Tweaking the defective and dangerous concept of "radio privacy" is not the answer. No other western democracy I know of has this kind of law. I ask you to vote against this bill and while youï¿½re at it submit a bill of your own to repeal the ECPA. The laws of physics and simple common sense demand it. There are reasonable, practical, socially redeeming, and Constitutionally acceptable solutions to these problems --but this Bill and itï¿½s predecessor the ECPA are not the answer. Thanks for reading.

Sincerely,

Jacob Brodsky

Can anyone recommend a decent, robust, *32-bit* scanning package which supports the ICOM PCR1000? All the scanning packages I've found so far (including the one that comes with the scanner) are 16 bit Win 3.1 packages, some of which don't even run under Win95 (e.g. Scan*Star, which prevented my machine from even booting until I removed it's device drivers from my windows.ini file). Anything out there that supports 95, 98, and NT?

Scott Coleman, President ASRE (American Society of Reverse Engineers)

SNIP

No Bud, you're just upset because I caught you & you received a warning
from your provider for it. Otherwise, if it was successful you would have
done it more!

Truth hurts, huh!

>animals.

Yes, it is true. The 850 MHz cellular band is contigous with Air to
Ground
Communications. (AGT). The impact here is that a cell provider must
install a very sharp filter in the transmit path to notch out noise in the
AGT spectrum.
The filter is typically made of three sections of very high Qu cavities.
Physically, they
are the size of scuba tanks. And since there is no guard-band, the cell
service provider must rolloff some of the upper B-Band transmit spectrum.
This holds true only if the cell site is collocated with the AGT provider,
i.e.,
an airport installation. There is only a handfull of situations where this
occurs
in the USA.

I created a TVRO-TALK Mailing List to compliment
the SATELLITETV Mailing List... which is located at:
http://www.onelist.com/subscribe/satellitetv

The SATELLITETV List is for ONLY posting info about
what your watching on Satellite...

The TVRO-TALK list can be used for any Satellite TV dissussion,
such as Analog / Digital Equipment, Satellite locations & formats,
Dishes / Feeds / LNB'S, just about anything related to the Satellite....

To Sign up go to:
http://www.onelist.com/subscribe/tvro-talk

or if you don't have WEB Access use the following method:

Send EMail to: tvro-talk-subscribe@onelist.com

Enjoy,
Keith

3721. FS: Motorola HT-1000 UHF (2)

Newsgroup: rec.radio.scanner
Date: 1999-03-10 00:00:00 UTC
From: N6RHL@mho.net
Message-ID: <36e5c76f.871705@news.mho.net>
Source record: 125417
Cross-posted to: rec.radio.swap,rec.radio.scanner,alt.radio.scanner

The previous deal that I had fell through apparently since that person never came throught with his money order. SOOOOOO

I have two HT-1000's for sale.

Model # H01RDC9AA1BN NX

UHF 403-470 mhz band split.

Both radios come complete with 1 battery each, 1 antenna each and 1 charger stand each. However, there is only one power pac for the charging bases for the two radios.

These are two channels radios that can be converted to 16 channels.

Radios are in working order. There were previously used by a volunteer fire fighter on his department's channels (the dept switched to 800 mhz trunking).

Radios are in good shape. I would say 8.5 out of ten.

I can supply serial numbers upon request.

Asking $600.00 for the set or best offer within reason.

Email to N6RHL@mho.net with any questions or offers as I do not check the newgroups very often.

Thanks, Dave..

For Sale: Pro64 400 channel handheld scanner. Triple conversion 800mhz scanner, programmable by computer with optional interface cable. Coverage from 29 - 960mhz. One touch weather. 17 Band service search. 50 channels per second Hyperscan search speed. Potentially modifiable to receive full 800mhz coverage (see link: http://members.aol.com/noobody/pro64vdc.htm) Note: It is a Federal offense to monitor cellular frequencies. Originally $299.99 in Radio Shack 1998 catalog. In "like new" condition, only $150 includes shipping from Houston, TX.

There is a shareware program called WinTone that will do it
automatically, or if you don't want that and want to do it
ultra-acurately, then use Cool Edit's frequency anaylis to look at the
two highest peaks and then look at the DTMF chart that's under the
DTMF tone generator menu to compare the two strongest frequencies with
the chart. Very accurate.

Hi,

Is there any information around that would give me an idea how to write software to decode data using one of two level data slicers? I guess I need the theory behind the pc interface and so on, and what'd be really helpful is there was any basic source around for this type of thing... yeah, basic, I don't know C or any other language, but i know basic extreemly well!

The type of signal i'd like to decode is a plain old 300baud BELL modem signal, will a slicer do it?

Any help appreciated!

Mike

>>Patch <glenmack@globec.com.au> wrote in article
>
>But shouldnt I get something showing in the signal strength meter?

Go to OPTIONS, select POCSAG then PROPERTIES. Now select HARDWARE&CO and
make sure the checkbox for "Enable Soundcard" is checked, and that the
"Enable Com Port" checkbox is unchecked.

Hope that helps you, and yes, you *should* see some action on the signal
levels *if* you have the soundcard selected as the decoding hardware.

Pager frequencies are located from 148 to 150MHz, not around 160Mhz as you
mentioned earlier. Also if you are using your speaker out / headphone
connection from your scanner you will probably only get low speed pagers
(512 baud), you need a discriminator tap to get the 1200 and 2400 baud pager
signals usually.

So if you do here pager sounds but get no decodes that may be it, just try
another frequency..

>get me in? Just a question.... Thanks, Kim

I believe that the controller in the opener "knows" the last code sent
from two separate code sequences generated by two separate remote
controllers.

So when the opener hears a transmission with a particular code, it checks
its records. If the code is the next code for your remote, or the next
code for her remote, it opens the door. Then it updates its records of
the last code it heard for whichever remote this was.

One thing I do wonder: the controller on your keychain has no way of
knowing whether the door is within range - they don't use 2-way
communication. If you accidentally press the button when you are
far away from home, the code advances to the next step. Then, next
time you're home, pressing the button on the controller sends a
code that is *two* steps after the last one the door electronics
last heard - so it won't recognize it as next in sequence. At this
point, the door opener doesn't work until you get in and re-sync it
with your transmitter. Or so it seems - does the system have any
more elegant way of dealing with this?

It is definitely used by a growing number of Federal, State, and
Local Government officials.
They think it is secure group communications during surveillance and
take down.
It is more practical than using cell phones for more than Two people
during a surveillance.
It is also used by a multitude of private investigators, businesses,
and average citizens.

It uses VSELP (Vector Sum Excited Linear Predictors) vocoding, QAM
(Quad Amplitude Modulation) modulating, and TDMA (Time Division
Multiple Access) 6 channels splitting from each frequency.

There are many more frequencies out of my range and nationwide. They
have taken most of the spectrum from 851-866 MHz.

> e) Something other than the above?
>
> Tell me what you think.

It's all of the above including e). When cellphones first came into
widespread
use, it was entertaining in a way to listen to husbands call their wives and
say
they would be working late. Then they call their girlfriends on say they're
on
their way over and to slip into something sexy. Yada yada.

Or to listen to men and women fight like cats and dogs calling each other
names
that would make truck drivers blush. It was all a novelty hearing what
people are
really like to each other in "private".

The novelty wore off. People started figuring out their cellphones were
really just
radios and the conversations got mundane, and now the cell band is so packed

in
any major metro area that it's almost impossible to hear anything good, you would
have to sift through a few hundred calls to get one good one.

I haven't listened to cellular for years for this reason, there's simply too much
worthwhile stuff to listen to people's personal drivel. Blah, blah, blah. I'll take
a hot bombing practice run, DEA stakeout or a high speed chase anyday. I could care less about smell phones, er - I mean cell phones.

Jon

3749. GSM Cellphone monitoring equipment

Dear All:

We need to put a system together to monitor a GSM cellphone
communications(Voice). This system is going to be used in Hong Kong.

Does anyone know whom I need talk to ?

Thanks,

Brian

You are confusing the NATS system with Cellular, AirCell is a regular cell phone. FCC has determined that existing "Cellular Ground Stations" are fine for use by AirCell.

Time will tell, I suppose. I don't doubt that there will be a 9500, but I DO doubt we'll see it this year. A lot of industry "insiders" agree with me on it, but again, you never know. As I said before - rumors.

Do you know someone at Uniden who can/would verify this? Just curious...

Yeah. As I pointed out to the US Senate Commerce Committee, it's a great way to "feel the pulse of a city." Let's face it: Cell phones are mostly used by busy people. Although I don't listen to it much these days, I have friends who have. Without mentioning specifics, they've heard drug dealers discussing their market, salesmen having phone sex with their mistresses, people discussing office politics, and so on.

If you're curious who travels the roads in your area, monitoring a cell phone is a non-invasive way of figuring out what the busier people in our society are up to.

I know it sounds nosey, but can anyone declare with a straight face that listening to police and fire channels is any different?

For me, probably 90% (c) and 10% (b). I usually don't bother, but everytime time I get irked by these nonsensical laws I'll reach for one of my cell capable radios and fire it up. Just to thumb my nose at the idiocy of it. Childish? Perhaps, but I'm one of those "radicals" who believe bad laws *should* be broken. However I take issue with your statement:

>(Which means that you also support the
>right of others to listen to your own private conversations.)

Let's properly define a 'private' conversation. I understand when I use a cellphone my conversation is NOT private, and I do not consider it private. I do not say anything I wouldn't say in a crowded room. And I know that no amount of legislation is going to change reality and "create" privacy where none can exist. But I expect a conversation I hold with my wife in my own home is private. (nope, no baby monitors around!) Should someone place a listening device in my home in an active attempt to invade my privacy, yeah, I'm going to have a bit of a problem with that.

If the government truly wished to serve the interests of the public, instead of cellular industry lobbyists, they would pass legislation requiring encryption, or requiring very clear warning language to a cellphone purchaser that they could not expect the same degree of privacy they have on a wired phone.

As for the entertainment value, most of what you hear is a shameful waste of time, but once in a while you'll hear something good for a chuckle.

>Subject: Why listen to cellular?

Why watch the evening news?
Why look at an accident scene?
Why listen to SW radio?
Why listen to public safety frequencies?
Why listen to Coast Guard frequencies?
Why listen to local utility companies?
Why listen to airborne aircraft?
Why listen to military communications?
Why listen to commercial broadcasting?
Why listen to cell frequencies/conversations?
Why? Because it's there. Most of the time boring...sometimes interesting....sometimes very funny and entertaining. If nothing else, it kills some time. Maybe it gives us a chance to listen in on someone elses life and compare it to our own? Too bad Sigmund Freud is dead. He would smoke a joint, do some coke, shoot some heroin and tell us why we're screwed up and listening to scanners in the first place. We all get a kick out of radios in our own way. Some similar to others, some rather dissimiliar. But all in all, it's generally harmless fun and entertainment.

Thank you for allowing me to participate in your survey.

"Rob Lang" <robertlang@nac.net> writes:

I did a mod to one of my scanners to receive cellular...

My interest died very soon.

No interesting traffic at all.. the urban legends toy all hear about the guy who calls the wife about being late and then calling the girlfriend are likely just that... urban legends. Cell users drop in and out of cell sites and frequencies often... it would be hard to follow a converstaio unless they are standing still.

Totally boring... plus people will swap out of cellular sites and thuse you lose the conversation anyway. This was proably over 6 years ago... never scanned a cell since.

All I think of cellular is that it causes intermod on my local police trunked system... Got a damn tower witin a quarter mile!

Definitely hype and nothing else... not worth the bother.

I have gotten some e-mails on this and everything that I said doesn't
work in all circumstances. I had better clarify some items. The above
statement of tapping off of the OS board works only if you are using a
serial port version of the PROgramit interface installed internally in
the scanner. You cannot do this if you have opted to use the parallel
version installed internally or if you have a external interface
whether it be serial or parallel.

Just a small note:

It's OK for you to listen to the cel-calls but it isn't OK for two cops that were chastized in this newsgroup. Seems to be some two-faced actions here.

I personally don't listen to telephone calls on my equipment. When my husband owned his electronic shop his technicians would listen on occasion through the service monitor and an outside antenna. It was easy to pick out an active frequency and flip a switch. That lasted about a month or so and they became bored. Having five scanners, two that are cellular capable we just don't care for it.

Happy scanning.....

The "freeware" version has a bug; the symptoms are as you describe.
There is a newer verison, but it is now nagware ("To make this
annoying dialog go away, send me $40...") so it didn't last long
enough on my system for me to tell whether the bug had been fixed. ;-)

The Calgary Police Service uses Motorola's ASTRO CAI (IMBE) digital
Mode for all it's communications. They use both clear and encrypted.
If you want to listen in on CLEAR digital comms, buy an APCO 25
compatable portable or mobile radio, and program it with the frequencies
for the various zones. Don't use it in the trunked mode as the coms
people will know you are listening and shut you down (over the air).

Its not listening to cell which is so great as I find it boring compared to listening to close
neighbors on their cordless phones. ;)
What is an issue is that people want their scanner unblocked since the feeling of
800-900mhz cell
frequencies blocked gives one a feeling that they are being controlled, regulated and cut out.
It simply doesn't make sense that all frequency is legal to listen too except these few piddly frequencies in the 800-900mhz range
as if the FCC determined it is god and has the right to limit us to not receiving electromagnetic cycles in this range.
I think ALL scanners should be unblocked and it should be up to the individual if they choose to follow
the law or not.
I also think that those who don't want to be listened to, should broadcast in encrypted format instead of raw formats which
are not only manmade but are natural in nature.

I find it funny how the government has recorded every phone call made over the last 8 years but suddenly declares that your conversations are "private" and thus should be protected.
Who is going to protect us from the government recording and evesdropping on us?
If the gov can do it, shouldn't the public be able to do it too since the government is owned and ran by the public?

>range (distance).
>

I haven't heard any good things about this counter. Probably because most people don't know what a counter is really for. People think they are magic black boxes that, when near Joe Security Guard at the mall, can pluck the frequency of his radio out of the air like magic from across the room. Some counters can do this, but they cost a lot more than the radio shack one. Quite simply, my radio shack freq counter is as deaf as a brick.

To get a good reading on my cordless phone, I had to literally touch the antenna on the phone with the antenna on the counter. Not very impressive, but understandable when you consider how much this thing cost (I got one of the old ones on clearance for $39.95 US.)

If you want to use this counter for it's intended purpose, i.e. reading a frequency inline from a circuit (like if you wanted to calibrate your scanner, for example) then it's OK for this. I say "OK" because it will be sloppy at best, and therefore not a recommended tool for the job. For about $100 more you can get a counter from OptoElectronics that works much better for this.

And should you desire a magic box to pull frequencies out of thin air, then you want the Opto Xplorer, which can be had for as (little?!) as $899. Oh and if you get one in the US, it won't do cellular either. Cool, huh? I don't have the cash to outlay on such a goodie, but if I wanted a "magic box" that'd be the one I'd get.

>Would appreciate hearing from anyone who has this particular counter.

Well, I've got the old one, and I hear they didn't improve the sensitivity of the new one enough to make a noticable difference. Save up a bit more and get a counter worth having, you'll be glad you did.

>

Oh no you don't!

Seriously, I couldn't think of a worse radio to hook an amp up to. Have you ever mounted that thing in your car and driven into a major metro area? The intermod problems will drive you nuts. Any kind of amplifier (even a high gain antenna) will only serve to increase the problem.

IF you're out in the middle of nowhere and IF the scanner isn't mobile, then an amplifier makes sense, and Radio Shack has a nice little cheapy that will work. It's purpose is to amplify TV signals, but with the right cable connectors it works with scanners too. Still, even then, I'd try a good base antenna first, before trying an inline amp. The 2026 is very susceptible to intermod problems.

Just my $.02.

-Phil

3782. Thank You All

I am new to scanning and have been reading all posts in this NG. I had purchased a Pro 91 and wasn't pleased for some reason, maybe because I have had bad experiences with my local Radio Shack. Now however, based on posts to the group and reviews from www.strongsignals.net I was able to make up my mind (and check my wallet) to purchase a new Icom IC-R2. I am very pleased with the unit, I started to purchase the unit from Bandercom but got cold feet thinking about U.S. Customs. If my courage comes back to me I will Make my next purchase from them.

Again I just wanted to say thanks,

Alan

Take a good look at a cellular "phone" and tell me what you see. Looks a lot more like a radio than a phone doesn't it. That's because it is a radio. The industry has convinced everyone that it is a telephone and entitled to all the privacy of a land line phone. I'll make a deal with them, if they can keep their radio waves from penetrating my home and even my body then I'll agree that it's a telephone.

You mentioned private communications. Anyone who knows how radios work knows that radio communications are not secure. The industry has bought themselves a number of legislators in order to perpetuate the charade that a radio is a telephone. I really have no interest in listening to the calls but to tell me it's illegal to listen to certain radio waves is wrong. Today it's the cellular frequencies, what will it be tomorrow. Maybe they'll make the frequency of an FM station they don't like illegal, after all a precedent has been set with cellular. Think about it.

Published Thursday, March 11, 1999

House panel acts to hold up police radio project
Conrad deFiebre / Star Tribune

A divided House committee voted Wednesday to block a $20 million radio procurement for a new Twin Cities police communications system, on the grounds that the deal was struck without competitive bidding in closed-door negotiations with the manufacturer.

Some warn that the controversy, raised when Minnesota electronics maker E.F. Johnson Co. objected to a deal to buy 6,500 radios from Motorola Inc., could scuttle a state-of-the-art system . Most existing police radio systems aren't integrated across city and county lines. "It's important that police be able to talk with each other," state Public Safety Commissioner Charlie Weaver said. "This is a significant public safety issue."

It's also a significant business plum, as some cost estimates for the 800-megahertz system, which would carry voice and data communications statewide, exceed $1 billion over the next decade.

On a 12-8 vote that crossed party lines, the House Governmental Operations Committee approved a bill sponsored by Rep. Doug Reuter, R-Owatonna, to stop all state spending on the new system until the Legislature gives a go-ahead. E.F. Johnson's Waseca plant is in Reuter's district.

"I chose to use the biggest stick I could find," Reuter said of his bill.

The background

In November, electronics giant Motorola gained a commitment from a state Transportation Department negotiator to supply about one-quarter of the Twin Cities system's mobile and portable radios. That came after Motorola formed, then dissolved, a bidding partnership for the project with E.F. Johnson, a division of Nebraska-based Transcrypt International.

Johnson officials claim they were improperly excluded from bidding. They say Motorola slipped in the radios as an unadvertised add-on to a $28 million contract for the system's infrastructure of antennas and transmission gear.

Only Motorola bid on that portion of the project because it alone makes the equipment specified, said Frederick Hamer, E.F. Johnson's vice

president for sales.

The deal is especially questionable, Hamer and Reuter said, because the radios aren't scheduled for delivery for two to three years. "It takes 60 to 90 days to build the radios," Reuter said. If the deal goes through, he added, Motorola would gain an unfair advantage toward supplying the rest of the system's radios -- business potentially worth $60 million or more.

State officials defended the deal, saying it will save taxpayers money because of deep-volume discounts offered by Motorola on the radio units, which cost $3,200 each. They also said that a prototype submitted by Johnson in 1997 didn't work satisfactorily.

Mancel Mitchell, deputy public safety commissioner and former chairman of the Metropolitan Radio Board, said the legislative action endangers a complex project involving dozens of governmental units.

Time is running out for cities and counties to replace aging police radio systems and for the board to continue reserving radio frequencies, he said. "All of the economies of scale are lost if this goes belly-up."

"B" is a stronger drive than "A", (hypothetically speaking of course), the illegality certainly adds a zesty flavor to reason "B", entertainment. But pretty soon, you figure out that you can get even more entertaining content on the Jerry Springer show than average cellular traffic. So interest in listening to cellular starts to wane.

Unless; it's an empowerment issue. A kind of compensation for a failed social life. An individual that holds the population in contempt experiences no guilt in listening and meddling in other's private conversations. It's a way for them to strike back at a perceived society that had treated them rough-shod for so long. This doesn't appear to be a healthy reason to run a scanner. But as reprehensible as some might think that is, I don't think that he should be rounded up until he moves beyond passive listening. A non passive act of badness.

>c) Because by doing so you are putting into action a personal belief
>that no government has the right to dictate what you may listen to in
>the privacy of your own home? (Which means that you also support the
>right of others to listen to your own private conversations.)

A complicated issue. I don't know enough about it to even take a side. But I never heard anyone talk about this:

Wouldn't police powers avail themselves with the same rights to monitor radio borne conversations won by scanner enthusiasts? How many arrests do you think were made as a result of illegally monitored cellular traffic last year?

None?

Really.

Ok. Whatever. Lemme know when y'all get it figured out.

It depends on the type of scambling that's currently being used.

If they're using Speech Inversion, then yes, there are a couple
of ways that this can be accomplished.

Check out the following URL for a commerical version of a Speech
Inversion decoder:

http://hometown.aol.com/ctpds49/index.html

Check out the following URL for a freeware version of Speech
Inverter for Windows 95/NT:

http://www.lpcom.com/download.html

BTW, It's Illegal to decoded scrambled transmissions in the USA.

The Panasonic KXT7890 is a very good cordless spread spectrum phone. (Higher
price than Uniden or Vtech. though) stay with 900 MHz phones.
Do NOT go with the newer Panasonic 2.4 Ghz. phones. They are only spr.
spect. one way, analog the other way. Siemens makes a 2.4 Ghz set that is
ss both ways.

3810. Why listen to cellular?

Newsgroup: rec.radio.scanner
Date: 1999-03-11 00:00:00 UTC
From: Wayne Farmer <WayneOHere@compuserve.com>
Message-ID: <36E75E95.5502@compuserve.com>
Source record: 125316

Over and over I see the requests in this forum from listeners in the US for cellular-capable scanners, or for mods to give their scanner the ability to intercept cellular telephone traffic. I still haven't been able to understand why there's so much interest in listening to cellular telephone traffic. Is it:

a) Because it's forbidden by US law? (Just as children are drawn to do the things that their parents forbid.) That is, the act of listening itself is exciting, and the content of what you hear is less important to you.

b) Because the content of what you hear is entertaining? (I can't imagine it being nearly as interesting as what you hear on the public safety channels, but then, maybe I don't have enough imagination.)

c) Because by doing so you are putting into action a personal belief that no government has the right to dictate what you may listen to in the privacy of your own home? (Which means that you also support the right of others to listen to your own private conversations.)

d) All of the above.

e) Something other than the above?

Tell me what you think.

It's because the USA is "supposed to be" the home of the free yet it's the only country in the world where it's illegal to listen to cellular. Also, most of the time it's said that it is quite more entertaining than police talk. I hope this helps you understand.

dont knock it till you try it.

I agree with you,here in Australia it isn't illegal to own a scanner
capable of receiving cellular,just illegal to monitor and tell anybody
what your heard. Most scanning enthusiests here find cell phones
boring as hell,and with the move to GSM digital cell phones,there will
be no point in even trying to listen to analogue cell phone in the
future.When will the rest of the world catch up,instead of passing
stupid laws to stop scanner producers making scanners that can receive
them.If people want private conversations,then they should encrypt
there conversations,not pass laws to stop people from trying to
listen.

Most modern video recorders with auto clock set and PDC keep the tuner active
even when in standby so these would still be detectable.

OK if you all post all the option settings you are using I may be able
to help
just saying that you only get gibberish isn't much help
Someone posted saying that you need a discriminator tap to decode
anything higher than 512 baud
that is not correct I get perfect 1200 and 2400 baud msgs straight from
the earphone socket in my BC100XLT and the recorder socket in my Pro2005
once you get it right a few times it's real easy

Anyone Have any POC32 registration codes kicking around?
=P

Save the flames I know I should pay the author blah blah blah..
But i wanna try it out for an extended period of time before I
purchase A reg code...

I know that various scanners can be modified, etc., but who makes
equipment that is specifically designed for monitoring cell freqs?
Is it available through the net? Thanks.

Uh huh. No doubt incidents like this are what fuels this inane legislation currently running amok through congress.

Now ask yourself a question: If the ECPA of 1994 had not been passed, what would have happened to our paparazzi pal? Answer: The same thing, punishable under provisions in the Communications Privacy act of 1934. Not because he intercepted this traffic, but because he used it for personal gain. The existing 1934 legislation works, folks. I say the ECPA of 1994 needs to be repealed. It's redundant and unenforceable, whereas violations of the 1934 act are clear and undisputable. And this HR-514 bill is stupid too. The communications act of 1934 already deals with the issue at hand. The only way a communication can be heard and then used for personal gain (this is how the news agencies get away with it, in case you ever wondered) is if it meets one or more of the criteria listed in the law deemed to be an exception. This exception includes all public safety transmissions, which allows the news agencies to make a living off of the information they get from them. If you haven't read the Communications Act of 1934, do yourselves a big favor and read it. It's a good law that basicly says: Listen and keep to yourself, fine. Listen AND divulge, go to jail. It doesn't get any more clear-cut than that.

-Phil
